

Supplementary data

Table S1. Details of the origins of new potato virus X isolates sequenced from Peru in this study

Table S2. Genetic diversity of potato virus X population based on the coding genome sequence and each gene separately.

Figure S1. The ML phylogeny of the concats of potato virus X Cluster B isolates. The Accession Codes of Peruvian isolates are in green, those of isolates from non-South American countries are in red.

File S1. Spreadsheet version of Table 1 including additional potato virus X isolate data. Column A, Database record number; B, Accession Code; C, Peruvian isolate number (see Figure 1); D, Phylogroup (see Figure 2); E, Cluster, as in Figure 2 and S File 2; F, Isolate name; G, Provenance (country or Peruvian Department from which the isolate was collected); H, Continent of provenance (grouping used for DNAsp6 analysis); I, rec, recombinant, n-rec, non-recombinant (cluster not given for rec sequences); J, Collection date, ? indicates submission date if collection date unknown; K, Host of isolate; L, Host cultivar, if known; M, CP sequences analysed.

File S2. The Accession Codes of the potato virus X isolates in the different clusters shown in Figure 2.

Table S1. Details of the origins of new potato virus X isolates sequenced from Peru in this study

^aND: Not determined; ns: Not significant, * 0.1 probability; ** 0.01 probability; N: Number of sequences, π : Nucleotide diversity, SS: Number of synonymous sites, NS: Number of non-synonymous sites, d_N : Non-synonymous nucleotide diversity, ds: Synonymous nucleotide diversity and d_N/ds : the ratio of non-synonymous nucleotide diversity to synonymous nucleotide diversity.

Figure S1. The ML phylogeny of potato virus X Cluster B isolates. The Accession Codes of Peruvian isolates are in green, those of isolates from non-South American countries are in red.

File S1 Spreadsheet version of Table 1 including additional potato virus X isolate data. Column A, Database record number; B, Accession Code; C, Peruvian isolate number (see Fig 1); D, Phylogroup (see Fig 2); E, Cluster, as in Fig 2 and SD File 2; F, Isolate name; G, Provenance (country or Peruvian Department from which the isolate was collected); H, Continent of provenance (grouping used for DNAsp6 analysis); I, rec, recombinant, n-rec, non-recombinant (cluster not given for rec sequences); J, Collection date, ? indicates submission date if collection date unknown; K, Host of isolate; L, Host cultivar, if known; M, CP sequences analysed.
