**Figure S1.** Modifications in the ADAM17 gene. (A) (i) Alignment of the reads in the vicinity of the deletion of the nucleotide at position 87943291 and (ii) sequencing chromatogram of a PCR amplicon of exon 8 of the ADAM17 gene demonstrating the deletion at position 87943291 on one allele. (B) (i) Alignments of the reads at the beginning and the end of the large deletion. (ii) Alignment of reads covering the gap caused by the large deletion.

**Figure S2.** Detection of ADAM17 and SH3BGRL expression in lysates of HEK293 cells upon trans-complementation by Western blot analysis employing an anti-flag monoclonal antibody. Neg = negative control.

**Figure S3.** Susceptibility of MDBK and CRIB-1 cells expressing bovine ADAM17 or SH3BGRL to a BVDV clone labeled with a fluorophore at the N-terminus of E2. Shown are the average and the standard deviation of three independent experiments.

**Table S1.** List of primers and probes employed in this study.
