**Figure S1.** Sequence alignment of HR1 and HR2 domains in the SARS-CoV-2 wildtype strain and its variants. The sequence comparison of the HR1 and HR2 domains in SARS-CoV-2 wildtype (Wuhan-Hu-1, GenBank: NC\_045512), Alpha (GenBank: OM757358.1), Beta (GenBank: OM736179.1), Gamma (GenBank: OM146072.1), Delta (GenBank: OM754056.1), Omicron (GenBank: OM757978.1), Lambda (GenBank: OM486769.1), Epsilon (GenBank: OM757360.1), Eta (GenBank: OM720711.1), Lota (GenBank: OM516760.1), Kappa (GenBank: OM680927.1), and Zeta (GenBank: OM485821.1). The different amino acids in the SARS-CoV-2 variants, compared to the SARS-CoV-2 wildtype strain, are highlighted in red color and pink shade. The amino acid conservation is indicated by the red bars.
