## Supplementary Material: Figures S1 and S2

Parameter	Results
Morphology	Icosahedral head ( $42.8 \pm 4.4$ nm) Short tail ( $8.5 \pm 0.5$ nm)
Titer on host bacterium*	$9.7 \pm 0.18$ log PFU/ml
Lysis plate size*	$0.5 \pm 0.05$ mm
Latent period*	115 min
Burst size*	145 PFU/infected cell
Host-range**	Host specific
Resistance to pH at 25 °C/60 min (titers ranging from)	Stability at pH 3 to 11 for (9.7 to 8.8 log PFU/ml)
Thermal resistance in buffer SM (titer after treatment)	63 °C/30 min ( $6.9 \pm 0.1$ log PFU/ml) 72 °C/ 30min ( $4.6 \pm 0.6$ log PFU/ml)
Resistance to sodium hypochlorite	Inactivated at 50 and 200 mg/l
Effect against <i>Pseudomonas</i> in raw milk	Reduction of 3 log CFU/ml

**Figure S1.** Phenotypic features of *Pseudomonas* phage UFJF\_PfDIW6. (A) Lysis plaques formed by UFJF\_PfDIW6 on the lawn of *P. fluorescens* UFV 041. Incubation conditions: BHI agar at 30 °C for 24 h. (B) Virion morphology. Transmission electron micrograph (TEM) negatively stained with 2% uranyl acetate. Bar magnification: 140,000X. \*Tests performed in TSB medium at 30 °C; \*\*Test performed against 23 bacterial strains belonging to nine genera. The methodology used for phenotypic characterization of UFJF\_PfDIW6 was described in detail by Nascimento et al. [27].

**Figure S2.** Conserved locally collinear blocks (LCBs) shared among *Pseudomonas* UFJF\_PfDIW6 phage, *Pseudomonas* sp. HN8-3 prophage, *P. fluorescens* str PF08 prophage, *P. chlororaphis* str PCLAR04 prophage, *P. chlororaphis* subsp. *aurantiaca* str CW2 prophage, *P. yamanorum* str GZD14026 prophage, *Pseudomonas* phage AF, and *Pseudomonas* phage HU1 genomes. The alignment was performed using progressiveMauve with default parameters. The colored blocks correspond to the LCBs predicted by Mauve. Horizontal white bars correspond to the Coding DNA sequences (CDSs) annotated in each genome.
