

# Human Rhinoviruses in Pediatric Patients in a Tertiary Care Hospital in Germany: Molecular Epidemiology and Clinical Significance

Franziska Neugebauer, Sandra Bergs, Uwe Gerd Liebert and Mario Höinemann

## Supplementary Material

**Figure S1: Combined Monthly total numbers of tested samples and rhinovirus cases.** Combined Monthly total numbers of tested samples and rhinovirus cases ( $n = 776$ ) from 2013 to 2017 stratified by species A, B, and C, as well as untypable rhinoviruses. Note the two different y-axes: the left axis shows the absolute numbers of detected Rhinovirus A, Rhinovirus B, and Rhinovirus C cases, as well as the absolute numbers of untyped cases, while the right axis shows the absolute number of tested samples.

**Table S1.** Primers and Probes used for Rhinovirus detection.

Primer/Probe	Sequence
Primer HRV-LNA-for (forward, 14 nt)	5'- CY+ AGC C+T GCG TGG C -3'
Primer HRV-rev (reverse, 21 nt)	5'- GAA ACA CGG ACA CCC AAA GTA -3'
Taqman-Probe HRV-Taq-FAM (22 nt)	5'- 6FAM- TCC TCC GGC CCC TGA ATG YGG C-BHQ1 -3'

FAM= FL= Fluorescein; BHQ= Black Hole Quencher=Dark Quencher, primer concentration: 10 pmol/ $\mu$ l, probe concentration: 4 pmol/ $\mu$ l.

**Table S2.** Reagent concentration for Rhinovirus detection.

Reagent	Concentration	Volume	Final Concentration	Company
H <sub>2</sub> O		1,7 µl		QIAGEN
2x Fast MP RT-PCR MM	2x(+Mg Cl <sub>2</sub> )	10,0 µl	1x	QIAGEN
HRV-LNA-for	10 pmol/µl	0,8 µl	0,4 µM	Metabion
HRV-rev	10 pmol/µl	0,8 µl	0,4 µM	Metabion
HRV-Taq-FAM	4 pmol/µl	1,0 µl	0,2 µM	TibMolBiol
Fast RT Mix		0,2 µl		QIAGEN
RNase Inhibitor	40 Units/µl	0,5 µl	20 Units	Thermo Scientific
RNA		5,0 µl		

Reagent concentrations and volumes used for Rhinovirus detection.

**Table S3.** Cycling conditions for Rhinovirus detection.

Step	Temperature	Duration	Ramp Rate	Mode	
RT	50°C	20:00 min.	20.00°C/s	None	
Denaturation/Activation	95°C	5:00 min.	20.00°C/s	None	
Amplification	95°C	0:15 min.	20.00°C/s	None	45 Cycles
	56°C	0:10 min.	20.00°C/s	None	
	60°C	0:30 min.	20.00°C/s	Single(530 nm)	
Cooling	40°C	0:30 min.	20.00°C/s	None	

The amplification was performed on a Light Cycler 2.0 Instrument (Roche).
