Figure S1. Effect of N-methyl-pyrrolidone (NMP) in association with mixtures of soy phosphatidylcholine (SPC) with The polysorbate 80 (T80) or poloxamer 407 (PO407) on the creaming index of emulsions of medium-chain triglyceride (MCT) in water.

Figure S2. Droplet size distribution (zeta-sizer images) with respective PDI and zeta potential values assessed for the studied formulations: **(a)** nanoemulsion (NE) and **(b)** cationic-covered nanoemulsion NE-PEI after 24 hours of preparing stored at 25 °C **(c)** TsV-loaded NE and **d)** TsV-loaded NE-PEI after 6 weeks, stored at 4 °C storage.

Table S1. Size, PdI, and Zeta potential measurements for different formulations, at distinct intervals of physical stability of NE formulations against pH and saline content .
