Simulated Lung Fluid (SLF) Preparation

Simulated lung fluid was prepared as described by Marques *et al.* [1]. In particular, as SLF was selected Gamble's solution that represents the interstitial fluid within the lung. When preparing Gamble's solution, the components should be added in the order presented in Table S2 to avoid salt precipitation. Citrate was used instead of proteins to avoid foaming and acetate instead of organic acids. Gamble's solution has a pH of 7.4.

Table S2. Simulated Lung Fluid composition.

Components	Concentration (g/L)
Magnesium chloride (MgCl ₂)	0.095
Sodium chloride (NaCl)	6.019
Potassium chloride (KCl)	0.298
Disodium hydrogen phosphate (Na ₂ HPO ₄)	0.126
Sodium sulfate (Na ₂ SO ₄)	0.063
Calcium chloride dihydrate (CaCl ₂ ·2H ₂ O)	0.368
Sodium acetate (CH ₃ COONa)	0.574
Sodium hydrogen carbonate (NaHCO ₃)	2.604
Sodium citrate dihydrate (Na ₃ C ₆ H ₅ O ₇ ·2H ₂ O)	0.097
