Figure S1.

2

PQ, AuSe and AuS were dissolved in DMF, to afford 2.0 g L⁻¹ solutions. These solutions were diluted to prepare serial concentrations corresponding to 0.01 – 0.06 mg mL⁻¹, in the case of PQ, and 0.001 – 0.02 mg mL⁻¹, in the case of AuSe and AuS. The solutions were analyzed by UV-Vis spectrophotometry and the calibration curves were established.

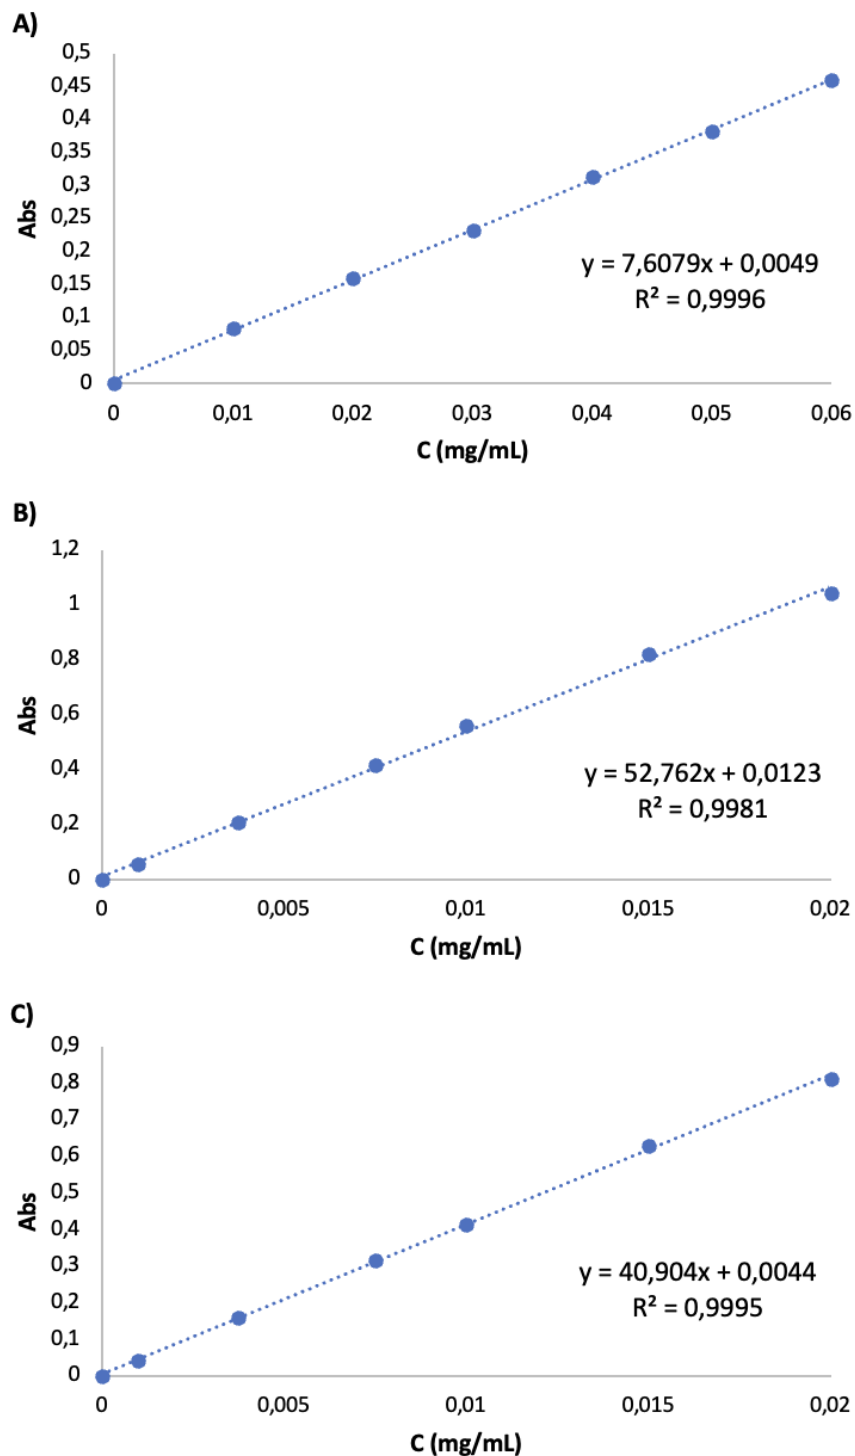

Figure S1. Calibration curves of **A)** PQ at $\lambda = 364$ nm; **B)** AuSe at $\lambda = 393$ nm and **C)** AuS at $\lambda = 364$ nm.
