

Figure S1. (a) Flights carried out in the experimental and commercial areas; (b) Phenology according to days post sowing (DPS).

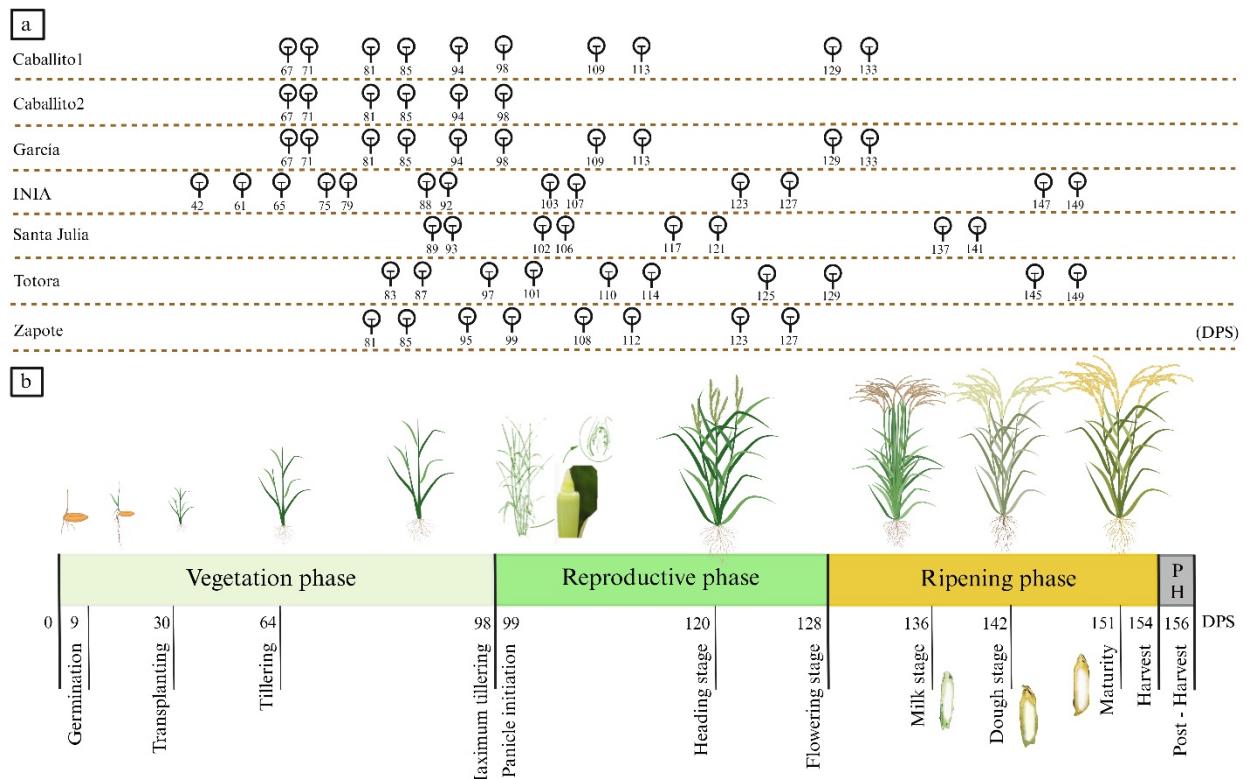

Figure S2. Comparison of R^2 between INIA-Vista Florida and Commercial areas according to combinations by number of coverages used to collect radiometer data. The R^2 was obtained from the comparison between radiometer data and thermal images.

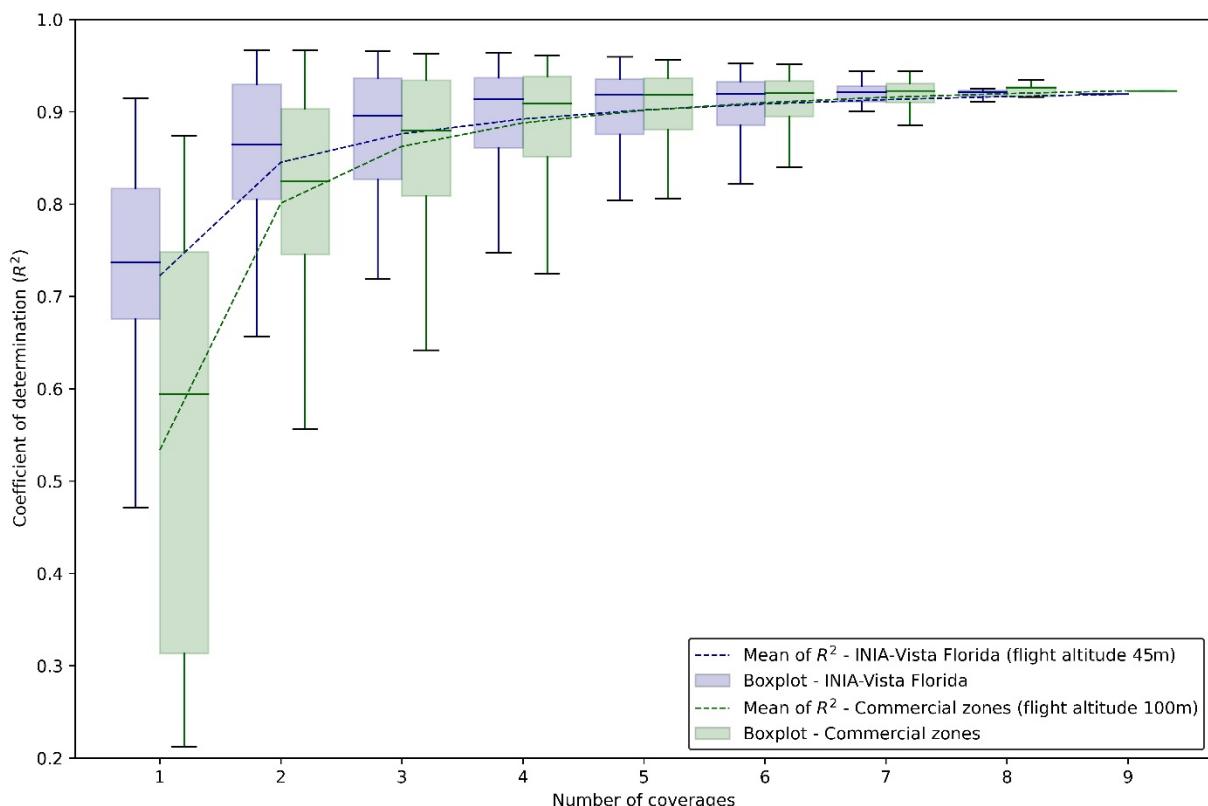

Table S1. Meteorological data from the portable station in INIA-Vista Florida experimental area.

Flight	INIA-Vista Florida			
	Ta (°C)	RH (%)	WS (m s ⁻¹)	RS (W m ⁻²)
1	28.09	61.84	3.53	514.63
2	25.61	79.95	1.68	319.44
3	29.53	65.57	2.23	968.17
4	26.49	86.72	1.27	397.75
5	29.68	65.26	2.04	1045.71
6	28.67	75.99	0.81	784.38
7	26.93	88.40	1.14	487.83
8	27.18	80.66	0.72	413.09
9	26.32	82.10	1.49	529.15
10	27.43	71.38	2.66	655.75
11	27.28	71.19	2.94	797.00
12	27.23	68.08	1.51	697.42
13	27.22	70.96	2.69	368.83

Table S2. Meteorological data from portable station in commercial areas.

* There were no flights conducted using UAVs.

Figure S3. The levels of water stress in the Caballito 1 and Caballito 2 commercials areas are represented according to the $G_s \text{ mmol m}^{-2} \text{ s}^{-1}$ reference scale. The water stress levels are as follows: (a) 67 DPS; (b) 71 DPS; (c) 81 DPS; (d) 85 DPS; (e) 94 DPS; (f) 98 DPS; (g) 109 DPS; (h) 113 DPS; (i) 129 DPS; y (j) 133 DPS.

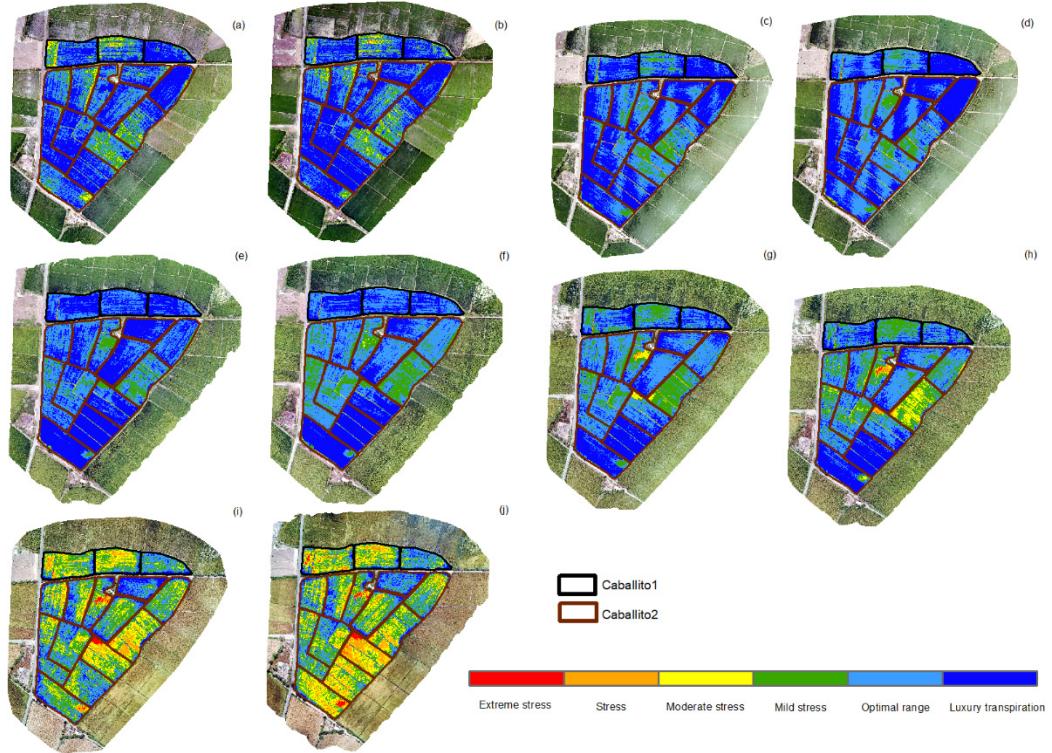

Figure S4. The levels of water stress in the García commercial area are represented according to the $G_s \text{ mmol m}^{-2} \text{ s}^{-1}$ reference scale. The water stress levels are as follows: (a) 67 DPS; (b) 71 DPS; (c) 81 DPS; (d) 85 DPS; (e) 94 DPS; (f) 98 DPS; (g) 109 DPS; (h) 113 DPS; (i) 129 DPS; y (j) 133 DPS.

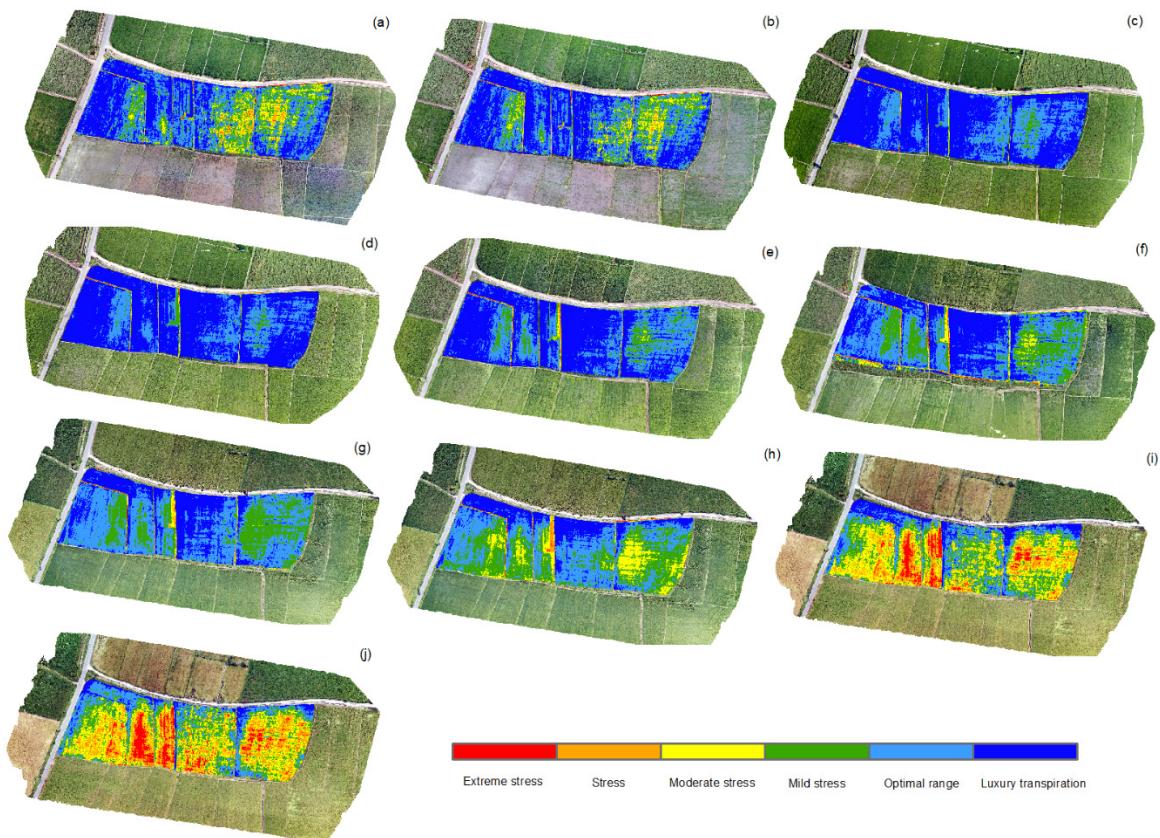

Figure S5. The levels of water stress in the Totora commercial area are represented according to the $G_s \text{ mmol m}^{-2}\text{s}^{-1}$ reference scale. The water stress levels are as follows: (a) 83 DPS; (b) 87 DPS; (c) 97 DPS; (d) 101 DPS; (e) 110 DPS; (f) 114 DPS; (g) 125 DPS; (h) 129 DPS; (i) 145 DPS; y (j) 149 DPS.

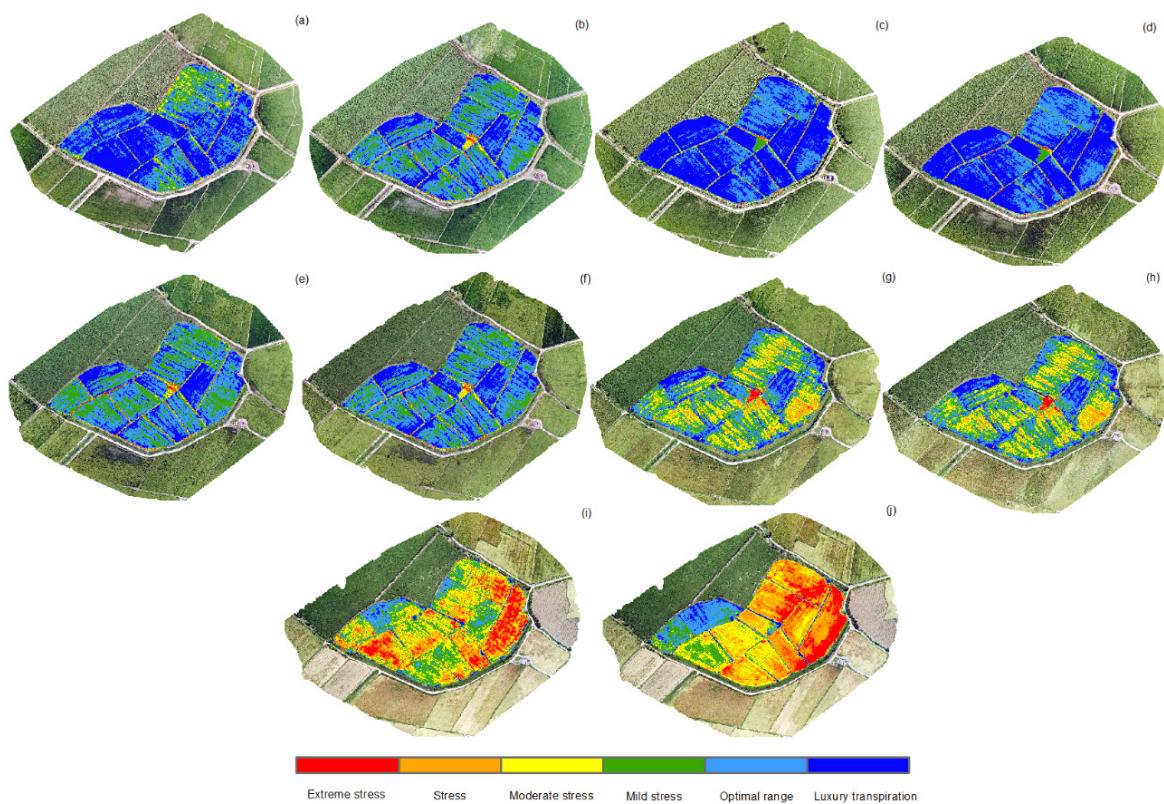

Figure S6. The levels of water stress in the Zapote commercial area are represented according to the G_s $\text{mmol m}^{-2} \text{s}^{-1}$ reference scale. The water stress levels are as follows: (a) 81 DPS; (b) 85 DPS; (c) 95 DPS; (d) 99 DPS; (e) 108 DPS; (f) 112 DPS; (g) 123 DPS; y (h) 127 DPS.
