HR = hazard ratio; CI = confidence interval; LLN = lower limit of normal; BMI = body mass index; MET-h = metabolic equivalent task-hour.

[a] Excluding participants with airflow obstruction at baseline using LLN definition rather than FEV1/FVC <0.7.

[b] Additionally adjusting for waist circumference (male: < 700, 700-849, 850-899, 900-949, or ≥ 950 mm; female: < 650, 650-799, 800-849, 850-899, or ≥ 900 mm).

[c] Propensity scores were estimated by multinomial logistic models.

[d] 44 women were with a missing or abnormal value of reproductive history. Reproductive history included menopause status (premenopausal, perimenopausal or postmenopausal), the use of oral contraceptive pills (never, past use, or current use), the history of pregnancy (the number of live births, still births, spontaneous abortion and induced abortion), and the history of gynecological surgery (hysterectomy, oophorectomy or mastectomy).
