^aConcentrations, in μM , required to inhibit the cellular growth by 50 %. They were determined from dose-response curves, and represent the mean ± s.d. All experiments were repeated at least three times. ^bValues in parenthesis are the percent of cells survival at 100 μM . ^cAs sodium salt. ^dFor the chemical structure see Figure 1. ^eHigher doses than 100 μM could not be evaluated due to solubility problems.
