

## Western blots of FLAG-USP8, pCREB, tot-CREB – Fig. 2d

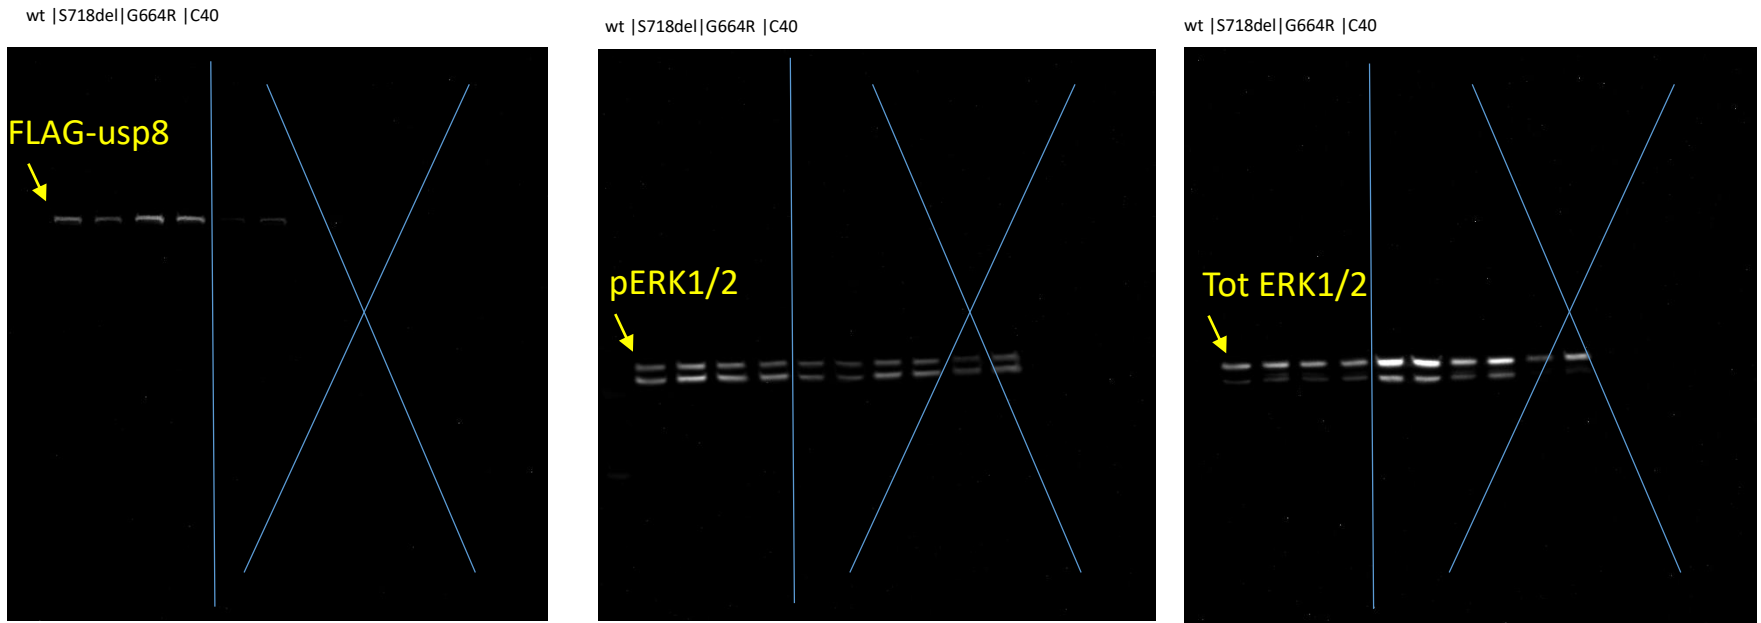

The molecular weight have been acquired in white light and juxtaposed at the original position of western blot bands

## Western blots of FLAG-USP8, p27, GAPDH – Fig. 2e

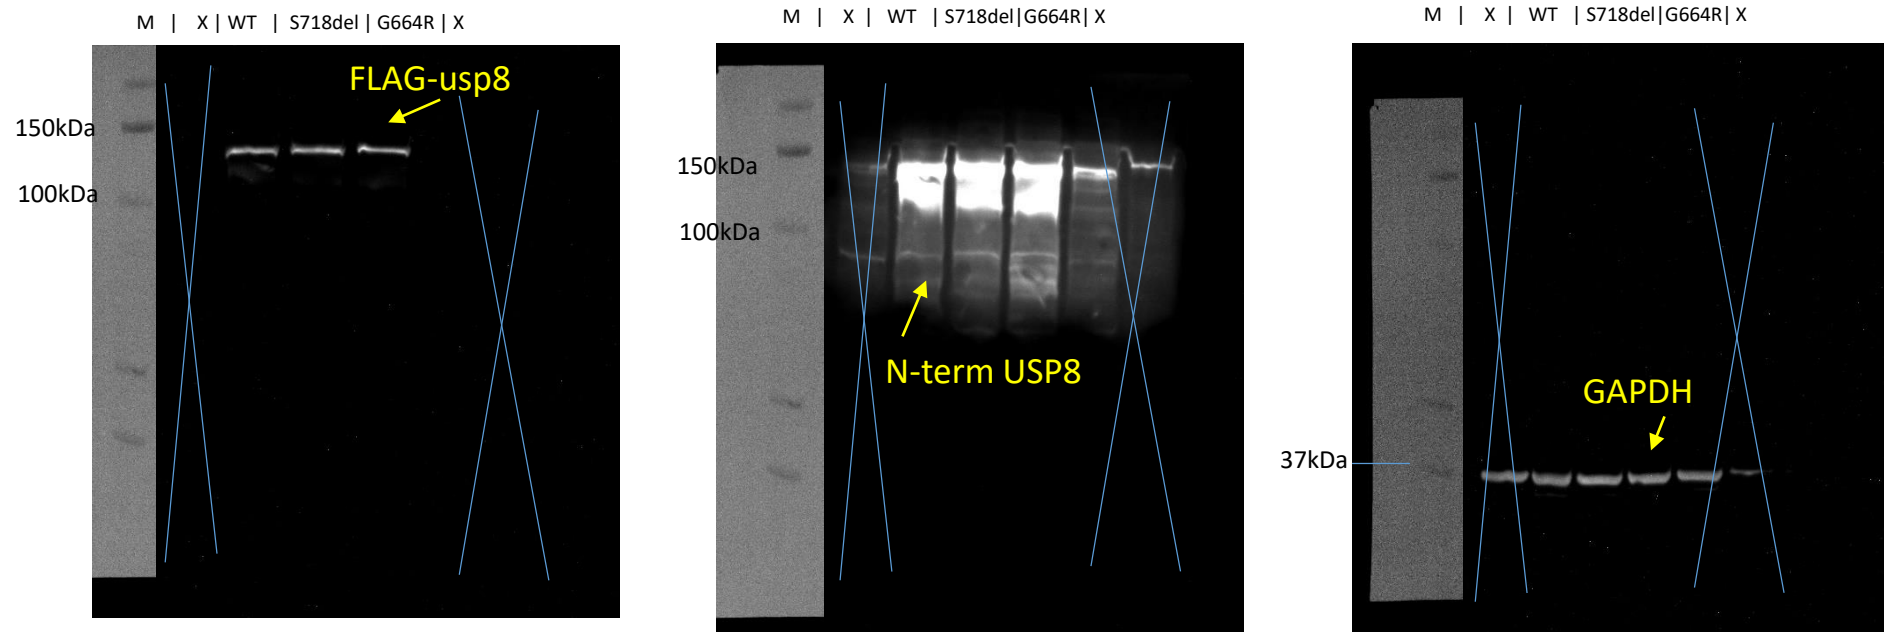

The molecular weight have been acquired in white light and juxtaposed at the original position of western blot bands

## Western blots of FLAG-USP8, pERK1/2, tot-ERK1/2 – Fig.2c

The molecular weight have not been acquired for these blots (no aspecific bands are usually detected with the above mentioned antibodies).

## Western blots of FLAG-USP8, N-term USP8, GAPDH – Fig.3A

The molecular weight have been acquired in white light and juxtaposed at the original position of western blot bands
