

# Supplementary Materials: Meta-Analysis of Gastrointestinal Adverse Events from Tyrosine Kinase Inhibitors for Chronic Myeloid Leukemia

Prahathishree Mohanavelu, Mira Mutnick, Nidhi Mehra, Brandon White, Sparsh Kudrimoti, Kaci Hernandez Kluesner, Xinyu Chen, Tim Nguyen, Elaina Horlander, Helena Thenot, Vamsi Kota and Cassie S. Mitchell

**Figure S1.** Text mining to identify adverse events from literature text. Text mining was performed to assess top breadth and sufficient sample size. Broad field wide plots mapping commonly occurring term cluster within abstracts containing “chronic myeloid leukemia” and a specific treatment (“dasatinib”, “nilotinib”, or “bosutinib”) were created to use in topic decision. Abstracts were lemmatized and weighted with term frequency-inverse document frequency scores to eliminate commonly occurring, non-informative words. The k-means clustering algorithm was applied to the TF-IDF matrices, and clusters containing articles which had similar groups of significant terms were formed. Dimensionality of the clusters was reduced using singular value decomposition followed by t-stochastic neighbor embedding (t-SNE) to allow for visualization. Panel A shows the clustering for abstracts containing “chronic myeloid leukemia” and “dasatinib” ( $n = 1325$  abstracts). Panel B shows the clustering for abstracts containing “chronic myeloid leukemia” and “bosutinib” ( $n = 232$  abstracts). Panel C shows the clustering for abstracts containing “chronic myeloid leukemia” and “nilotinib” ( $n = 1166$  abstracts). A notable cluster is a cluster ( $n = 27$  abstracts) with ‘colitis’ and ‘bleeding’ in Panel A.

**Figure S2.** PRISMA diagram illustrating meta-analysis study inclusion and exclusion criteria. Details are give in the Methods section of the main manuscript. Note that “repetitive” studies include patient cohorts that are secondarily analyzed by follow-up publications. Only the original or most complete unique patient cohort meeting inclusion criteria is included in the final set of studies for analysis.

**Table S1.** Table of included studies in the meta-analysis. Includes all data sources where data was extracted and analyzed. Full citation reference corresponding to the numbered reference for each study under the “Citation” column is given below the table.

PMID	Author	Total Number of Patients	Age	Type of Age (Mean/Median)	Citation
