

Supplementary Figure S4

Supplementary Figure S4. Double immunofluorescence microscopy of a giant cell GBM with anti-ATRX and anti-CRMP5 antibodies. The cell nuclei are counterstained with DAPI. In general, there was a good relationship between CRMP5 expression and loss or hypo-expression of ATRX by the tumor cells. Several CRMP5 expressing tumor cells have lost ATRX expression in their nuclei (*insets*). Scale bar, 60 μm .
