

Pan-Cancer Analysis Reveals SH3TC2 as an Oncogene for Colorectal Cancer and Promotes Tumorigenesis via the MAPK Pathway

Chengzhi Huang, Hui Yi, Yue Zhou, Qing Zhang and Xueqing Yao

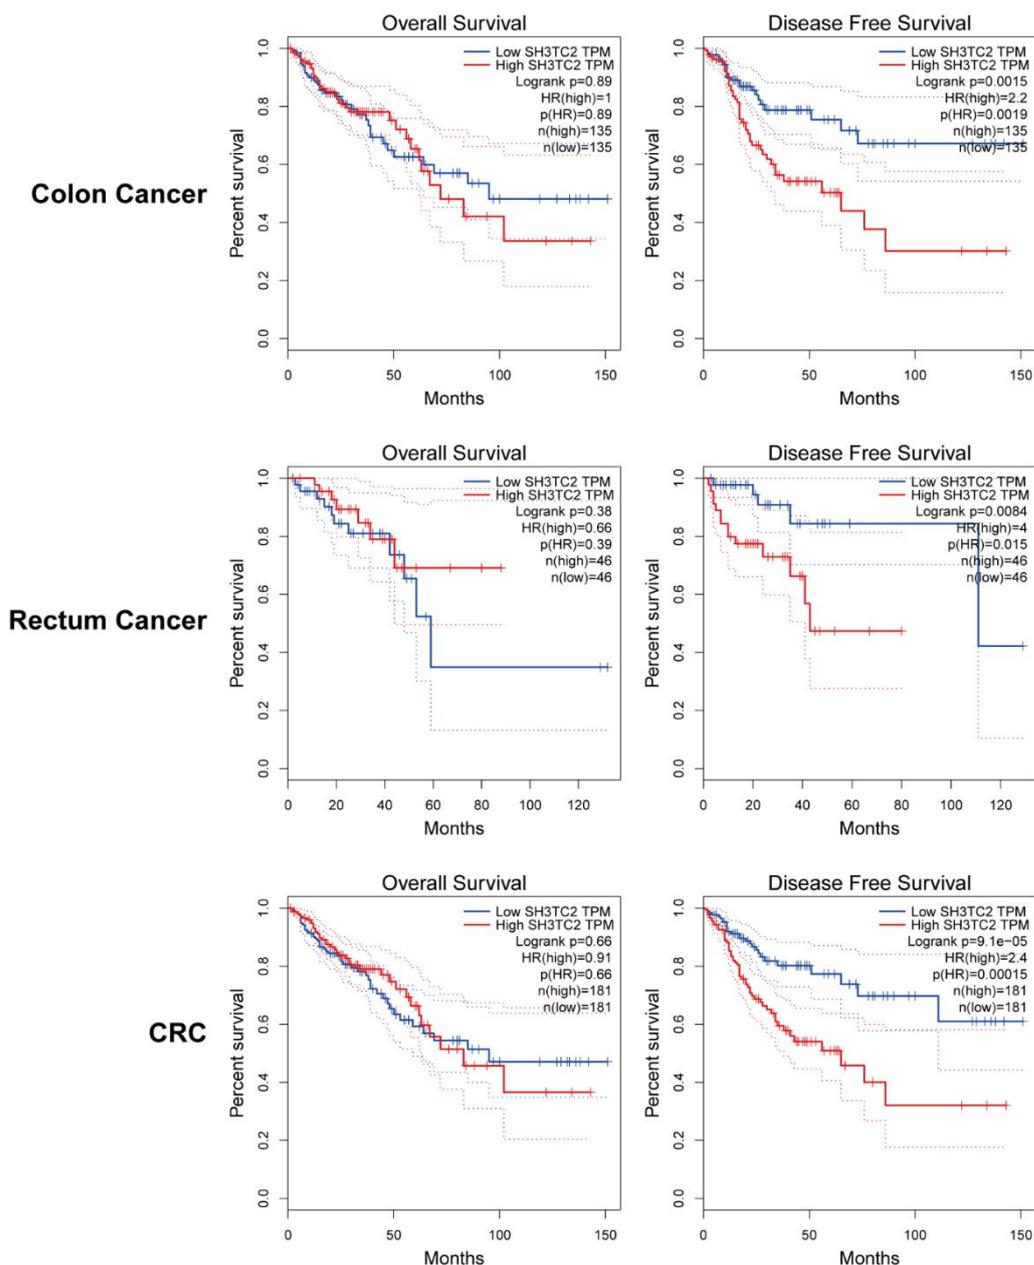

Figure S1. The bioinformatic analysis of prognostic value of SH3TC2 in CRC. The bioinformatic analysis via GEPIA database indicated that the higher expression of SH3TC2 in tumor tissue implied poor DFS of CRC patients (including colon cancer or rectum cancer patients), while no statistical significance was found in OS. The DFS plot of CRC was taken from Figure 1D.

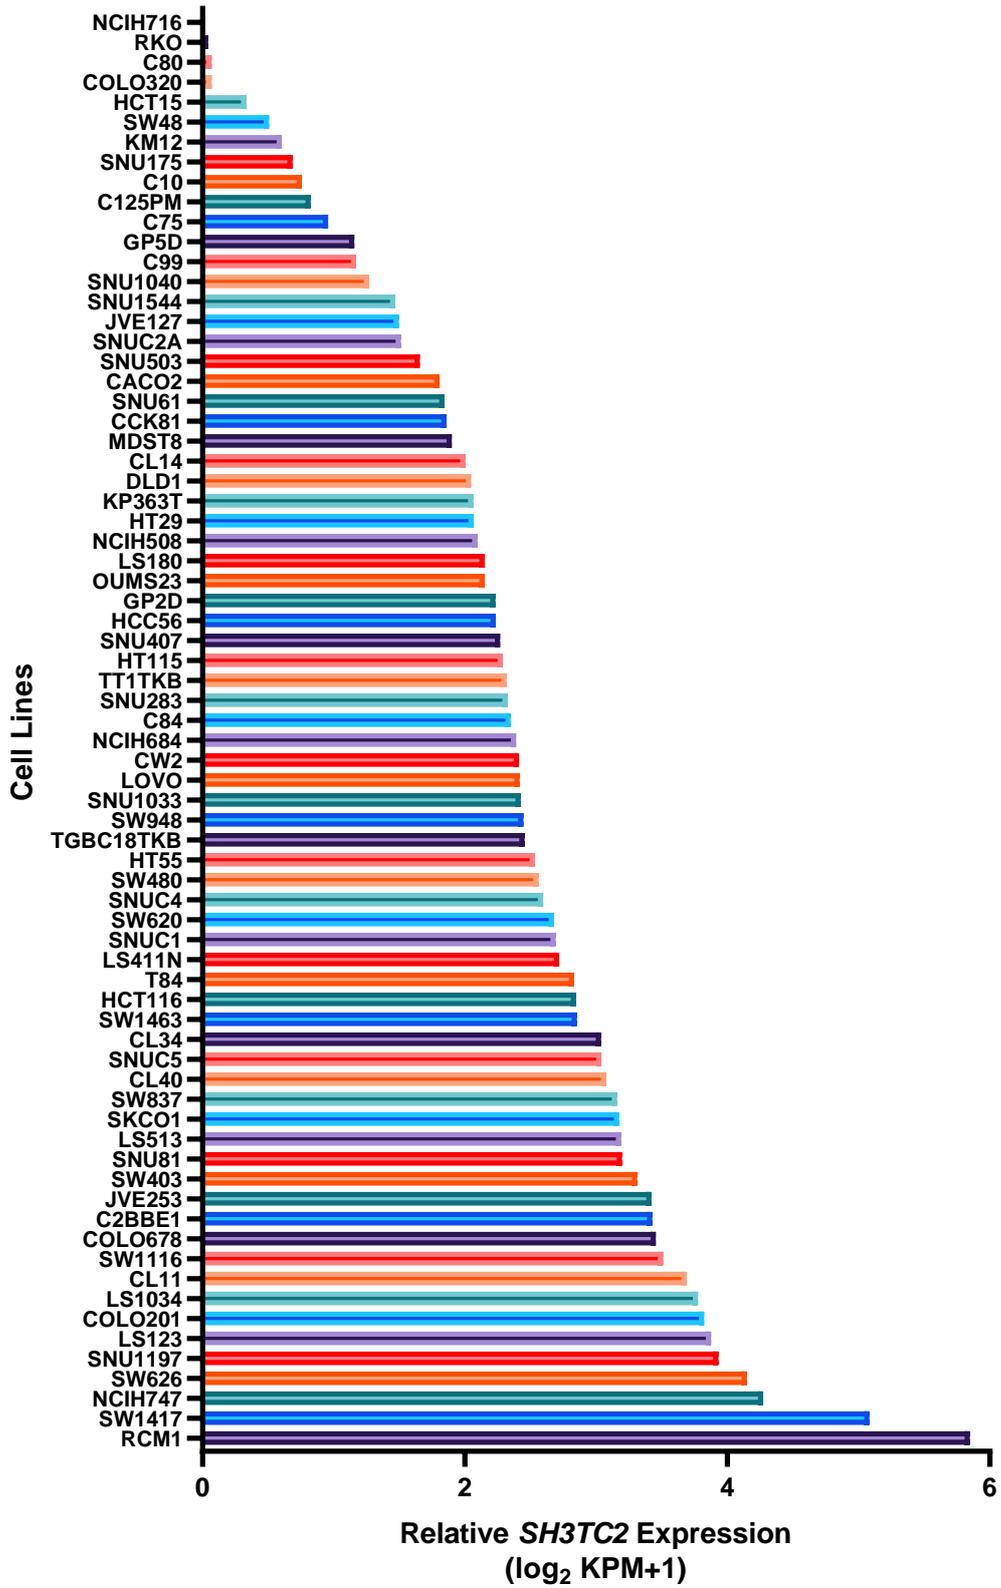

Figure S2. The bioinformatic analysis of relative expression of SH3TC2 in CRC cell lines via CCLE database.

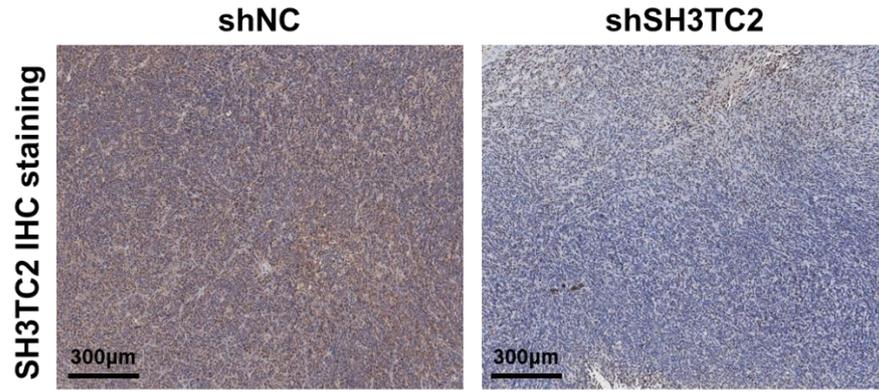

Figure S3. The knockdown efficacy of SH3TC2 in shSH3TC2 group in vivo.

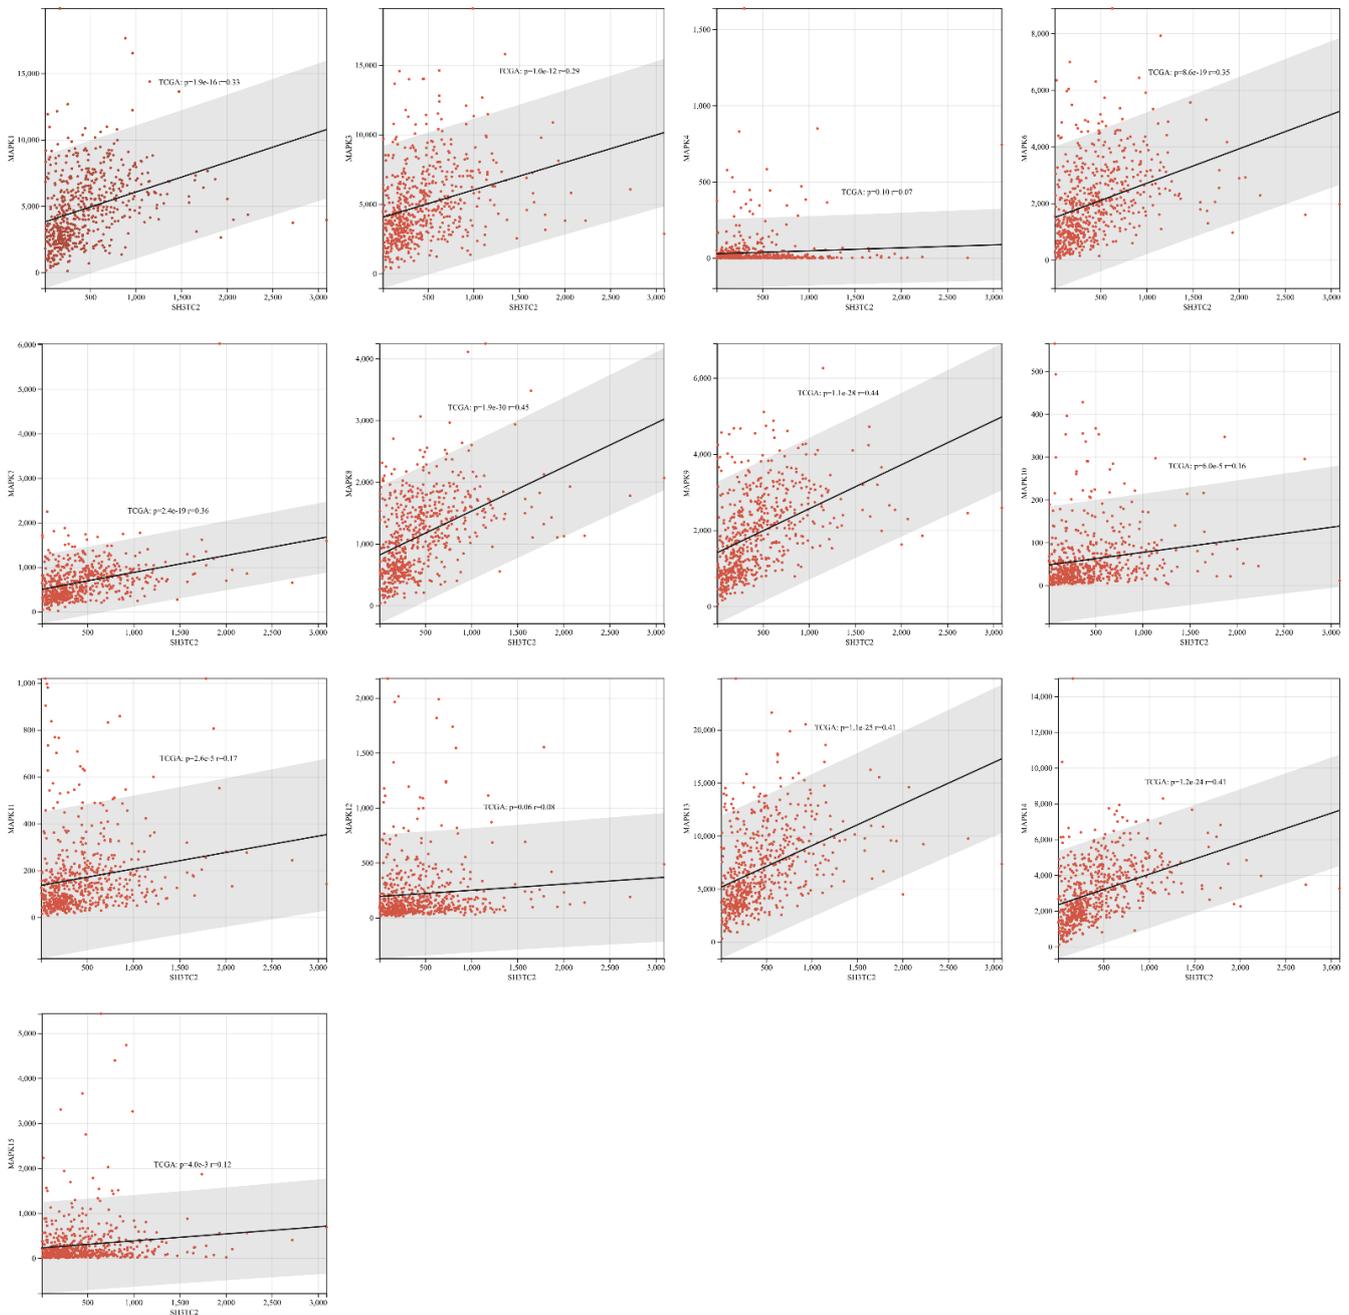

Figure S4. The expression relationship between SH3TC2 and MAPKs via bioinformatic analysis in TCGA database.

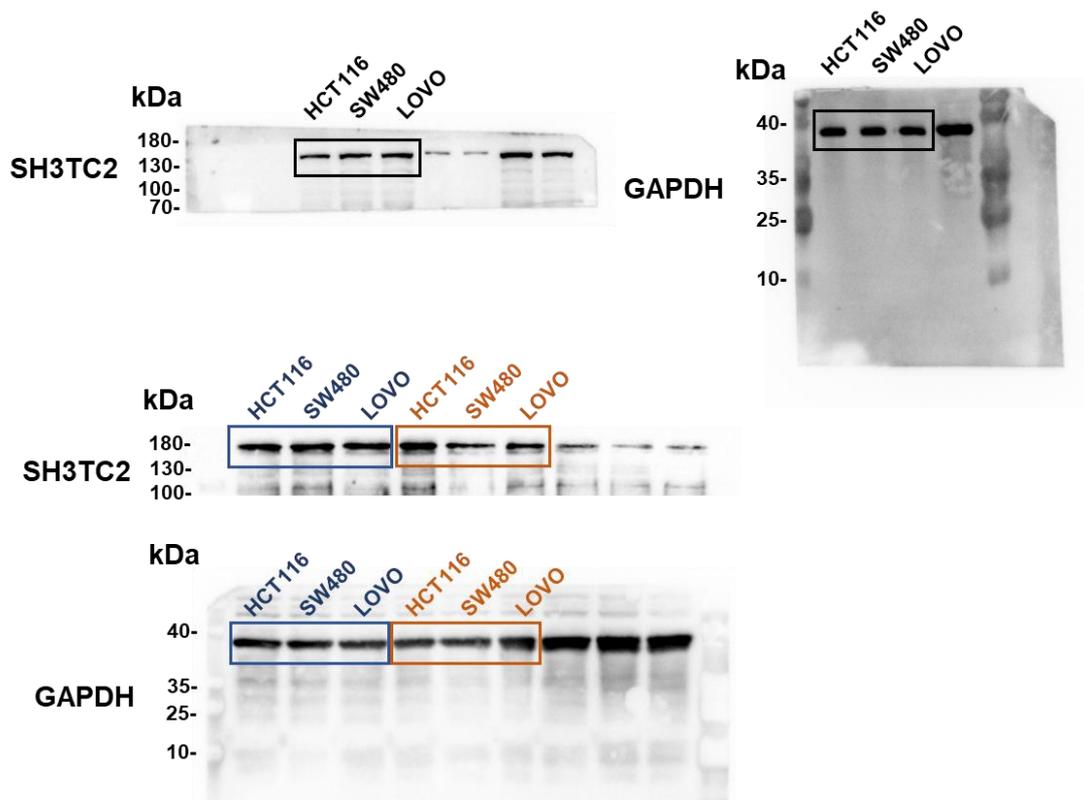

Figure S5. Source Western-blot Images for Figure 4A. The black, blue, and orange frame indicates three independent experiments. The quantification analysis for the western-blot could be found in Table S4.

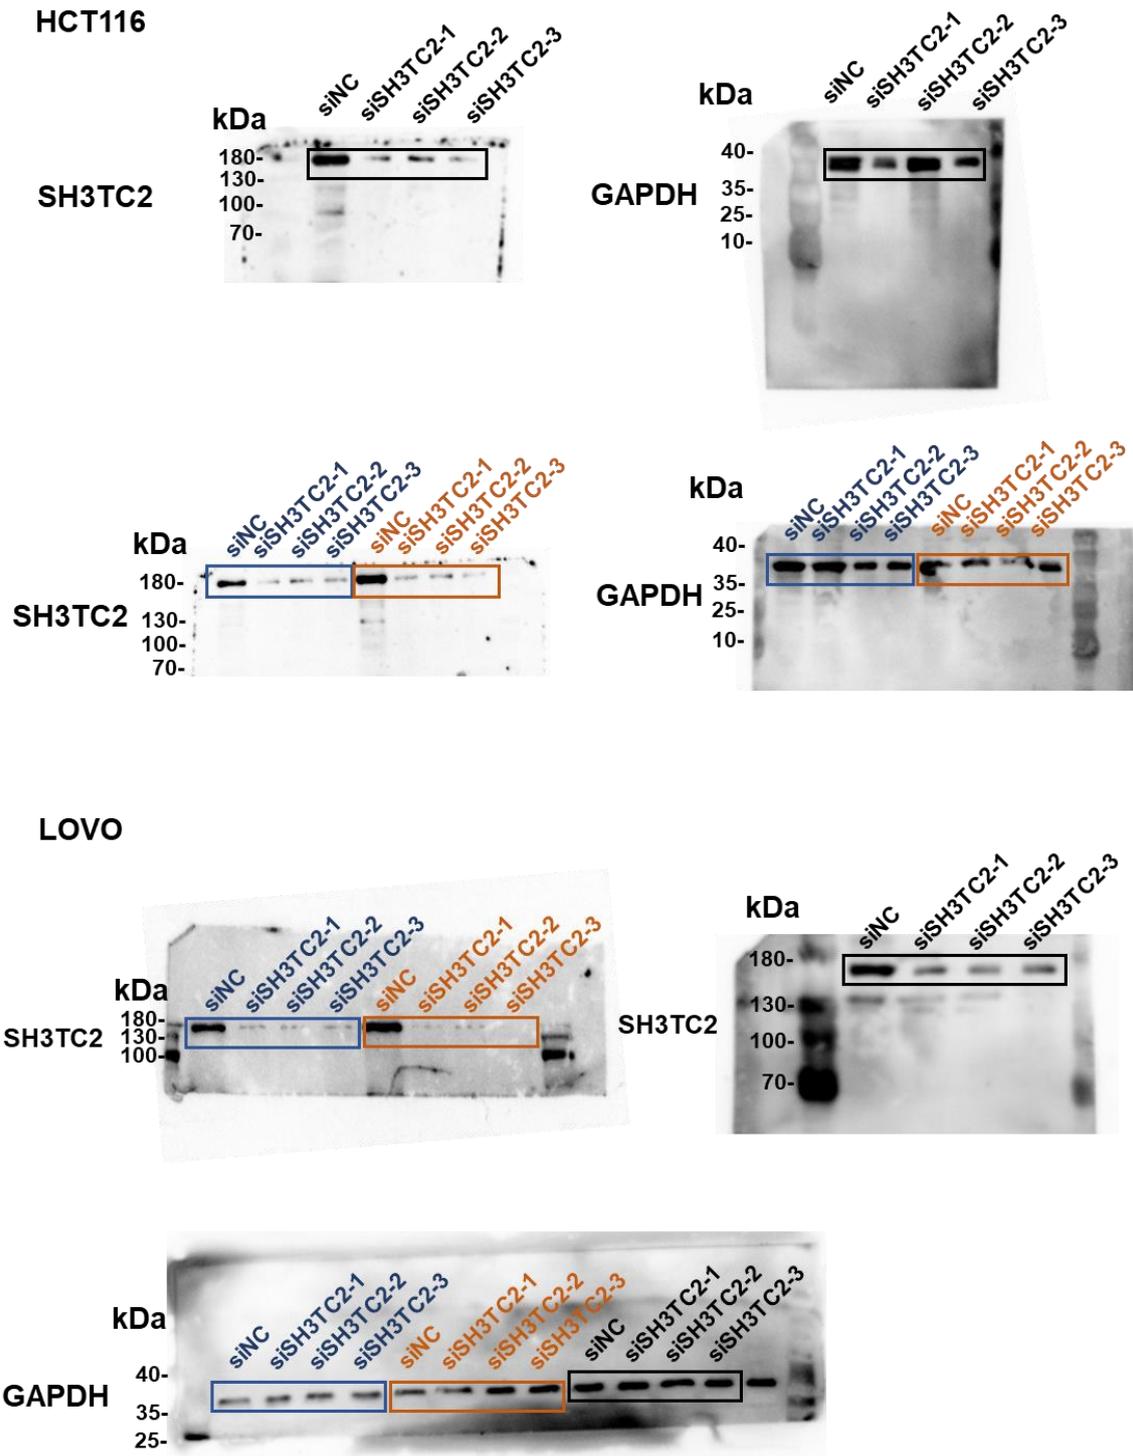

Figure S6. Source Western-blot Images for Figure 4C. The black, blue, and orange frame indicates three independent siRNA transfection experiments. The quantification analysis for the western-blot could be found in Table S5.

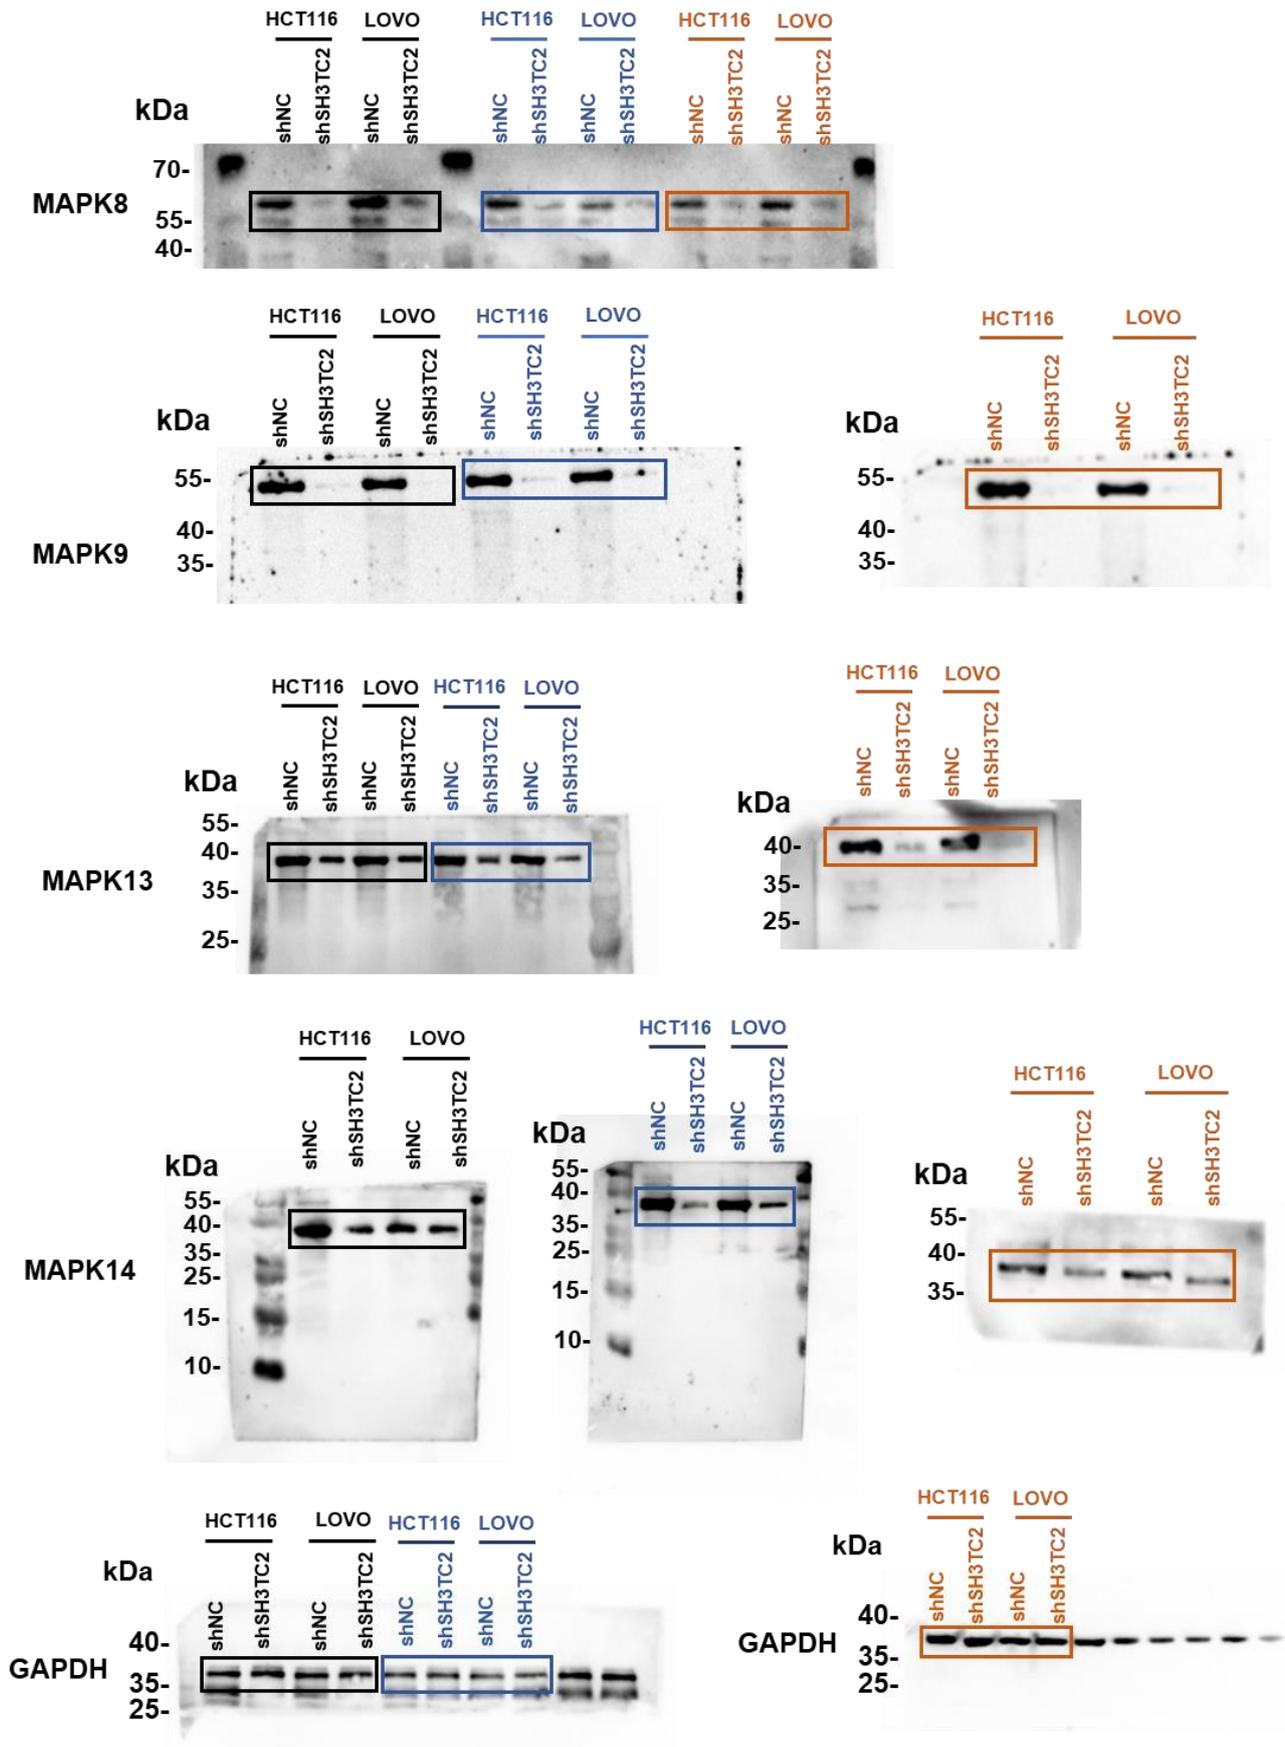

Figure S7. Source Western-blot Images for Figure 6A. The black, blue, and orange frame indicates three independent siRNA transfection experiments. The quantification analysis for the western-blot could be found in Table S7.

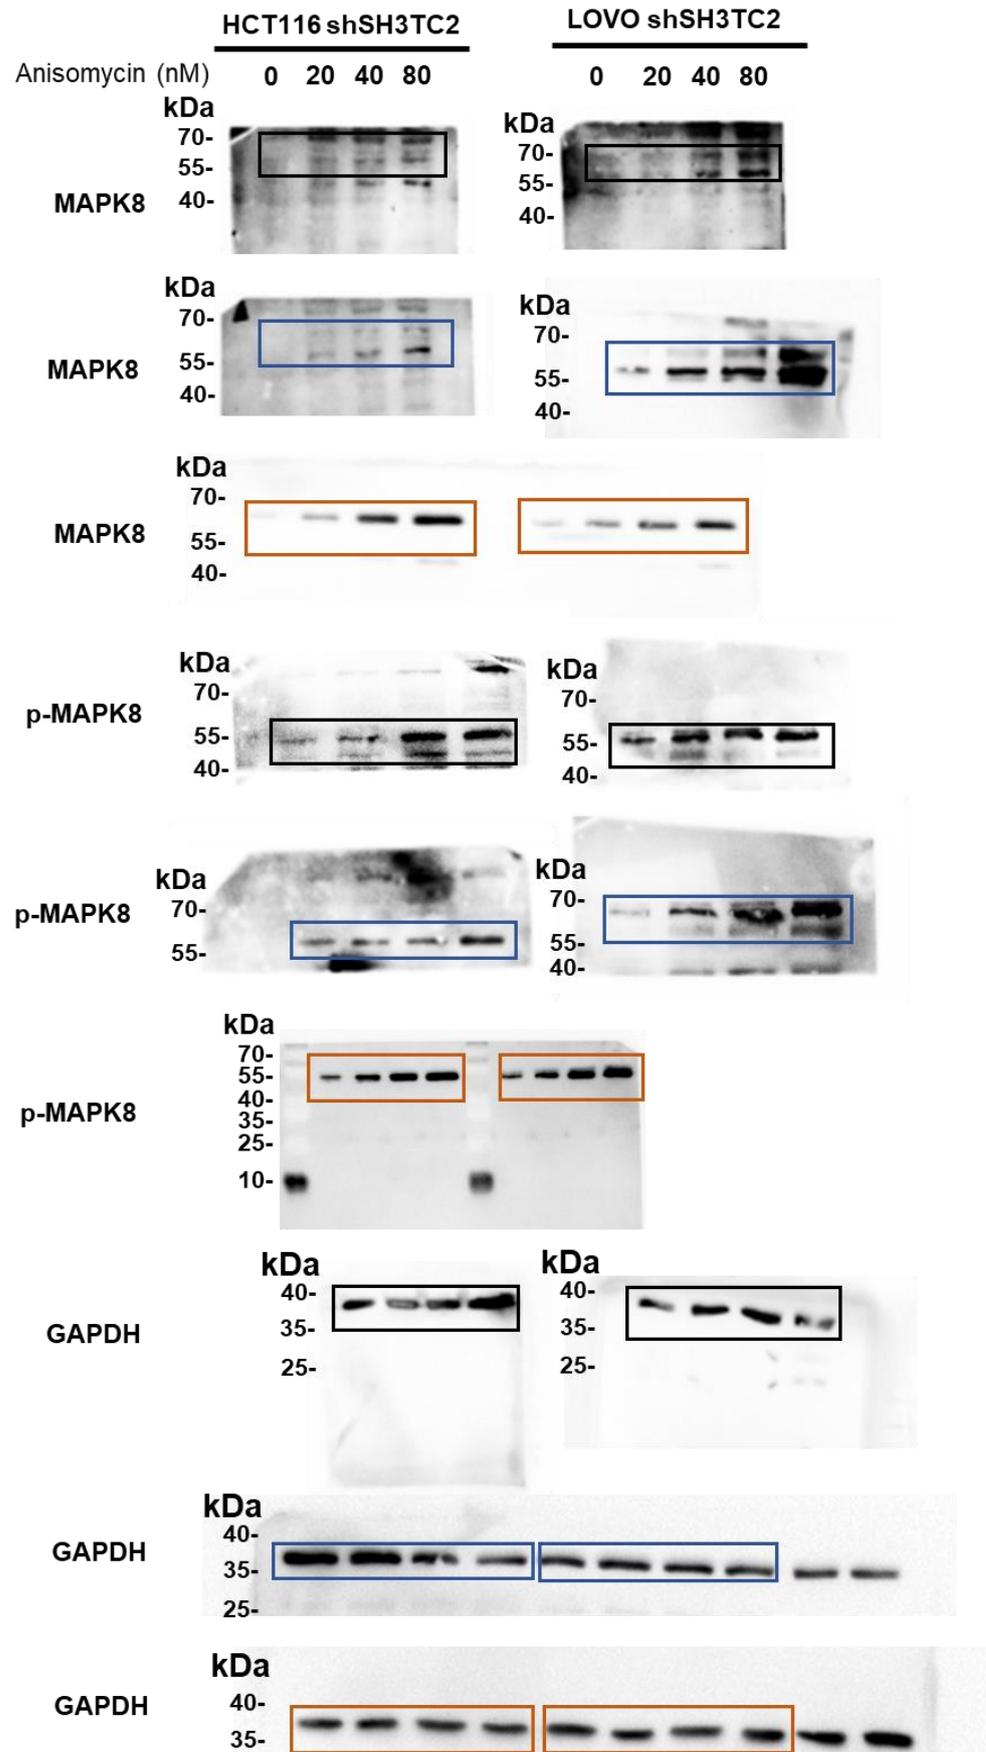

Figure S8. Source Western-blot Images for Figure 6C. The black, blue, and orange frame indicates three independent siRNA transfection experiments. The quantification analysis for the western-blot could be found in Table S8.
