¹ TNM information was missing for 1-1 patient of both groups. ² Results were available for a selected number of patients only. ³ Including primary tumor removal surgeries, diagnostic/explorative laparoscopies, metastasectomies. ⁴ p-Value acquired from Cox regression survival model. Ana: anastomosis; ASA: American Society of Anesthesiologists; CC: Sugarbaker's completeness of cytoreduction score; DSS: disease-specific survival; HIPEC: Hyperthermic Intraperitoneal Chemotherapy; ICU: intensive care unit; Perit: peritonectomy; sAC: synchronous PM + non-mucinous adenocarcinoma; sMAC: synchronous PM + mucinous adenocarcinoma.

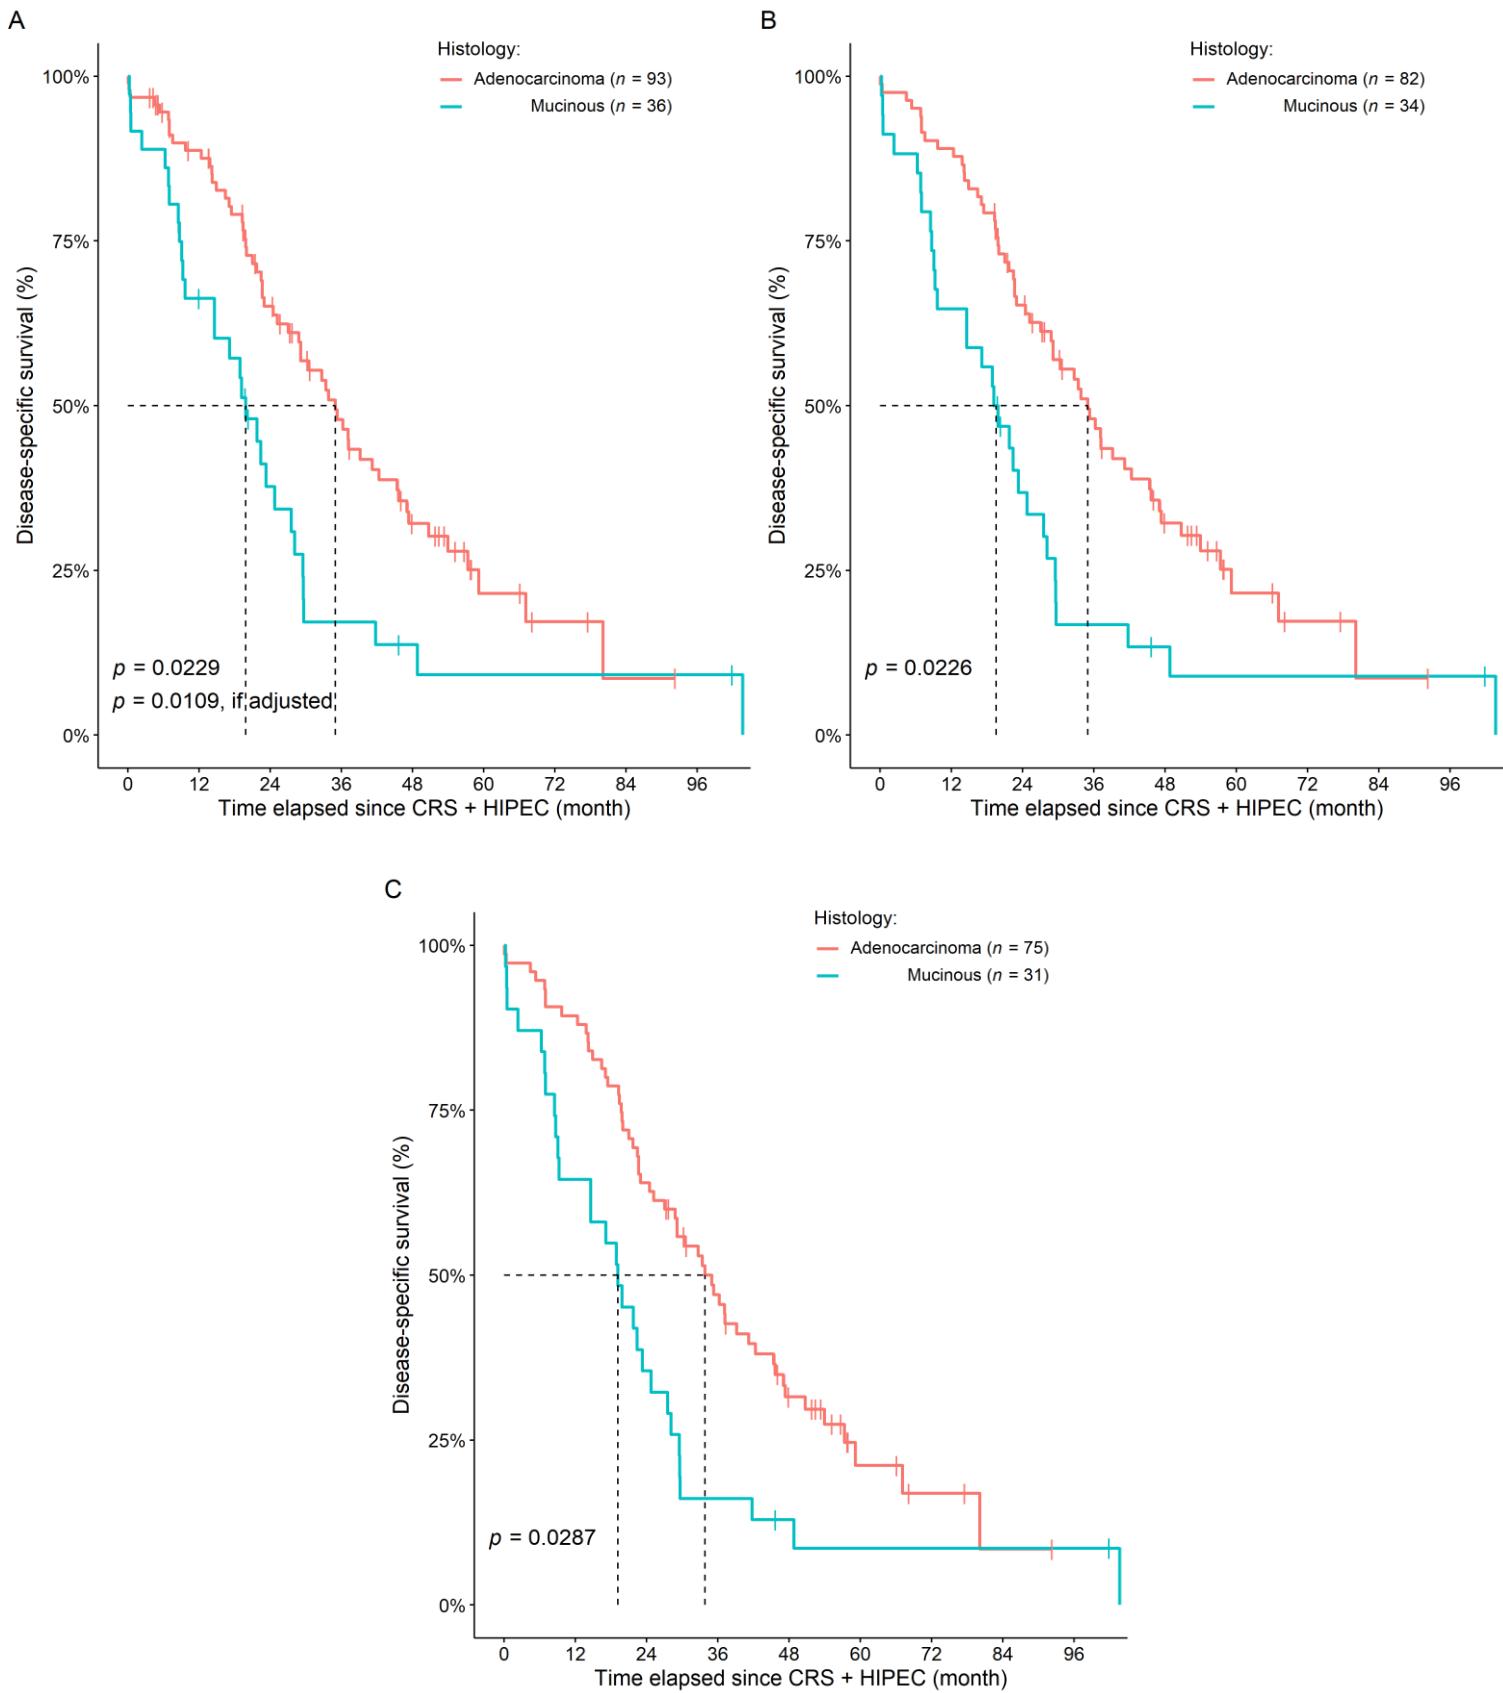

Figure S1. Differently adjusted survival curves of colorectal cancer patients with synchronous peritoneal metastasis. **A:** complete cohort; **B:** those patients were removed from the analysis, who had the CRS + HIPEC procedure in 2021; **C:** those patients were removed from the analysis, who had the CRS + HIPEC procedure in 202-2021. The histological diagnosis of mucinous adenocarcinoma was associated with inferior survival in all versions.

Table S2. Complete pre-, peri- and postoperative demographic and clinical characteristics of study participants having metachronous peritoneal metastases (PM). Unit of frequency and survival data is the number of observations (percentage) and median survival time (95% confidence interval), respectively.

Median DSS (month)	34.43 (28.48 – 48.13)	34.43 (29.96 – 48.13)	32.56 (19.12 – NA) ³	– 0.6490 ⁴

¹ TNM information was missing for 3 patients of the mucinous group due to the fact that no primary tumor resection was performed. ² Including primary tumor removal surgeries, diagnostic/explorative laparoscopies, metastasectomies. ³ Not enough observation to reach lower 95% confidence interval. ⁴ p-Value acquired from Cox regression survival model. Ana: anastomosis; ASA: American Society of Anesthesiologists; CC: Sugarbaker's completeness of cytoreduction score; DSS: disease-specific survival; HIPEC: Hyperthermic Intraperitoneal Chemotherapy; ICU: intensive care unit; mAC: metachronous PM + non-mucinous adenocarcinoma; mMAG: metachronous PM + mucinous adenocarcinoma; Perit: peritonectomy.

Table S3. Comparison results of all four study groups (adjusted *p*-values of post-hoc test). The corresponding count and numerical data can be seen in Tables S1 and S2.
