

Figure S1. PPAR γ -selective agonist, rosiglitazone, and Wnt inhibitors, FH535 and C5, inhibit cell proliferation in HPV16+ HNSCC.

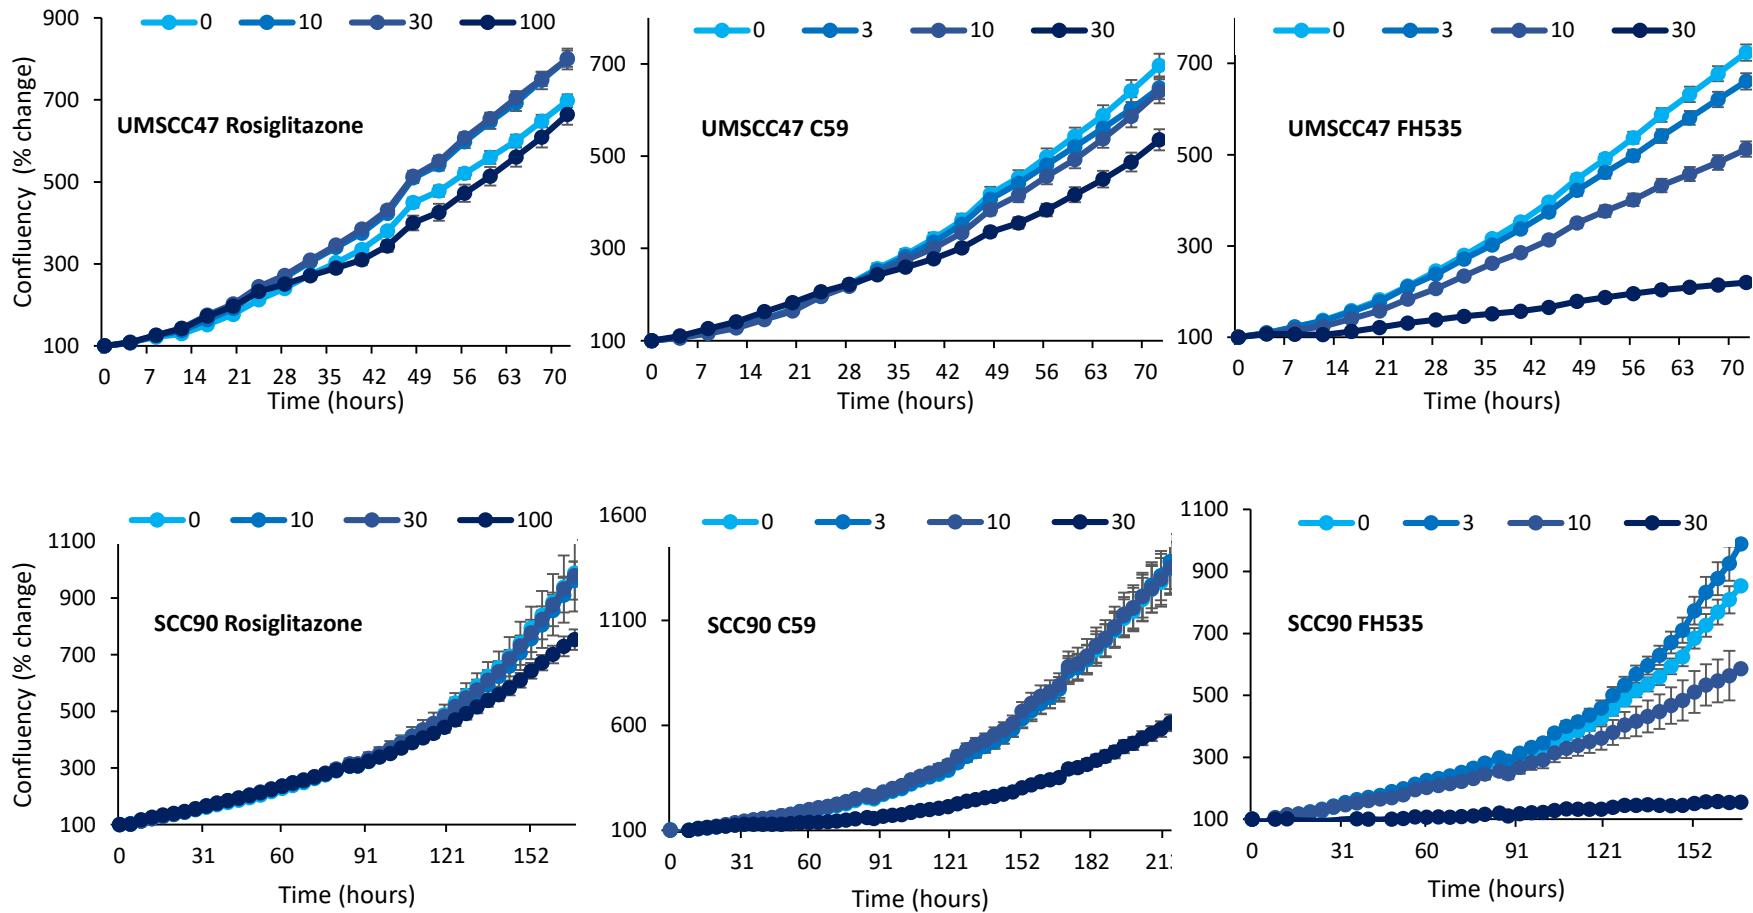

Figure S2. PPAR α levels are unchanged following fenofibrate treatment in HPV16+ SCC.

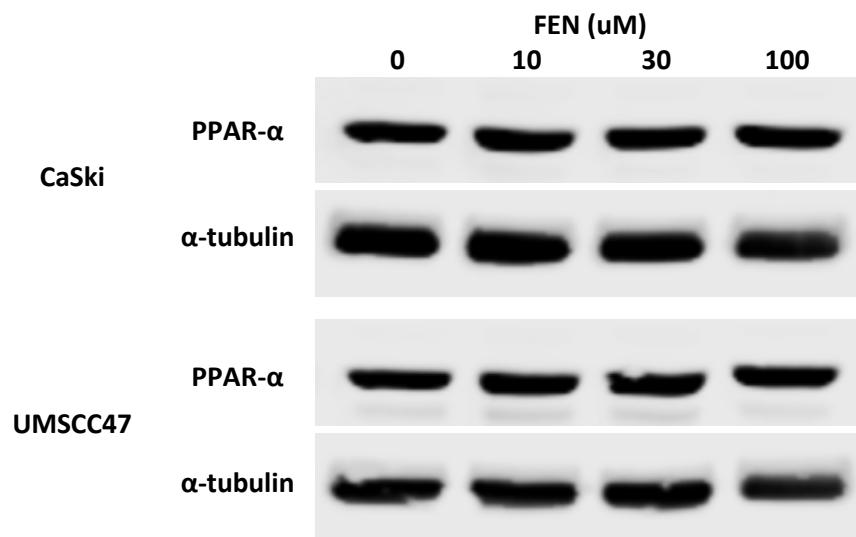

Figure S3. Fenofibric acid (FA) does not inhibit proliferation of UMSCC47 cells.

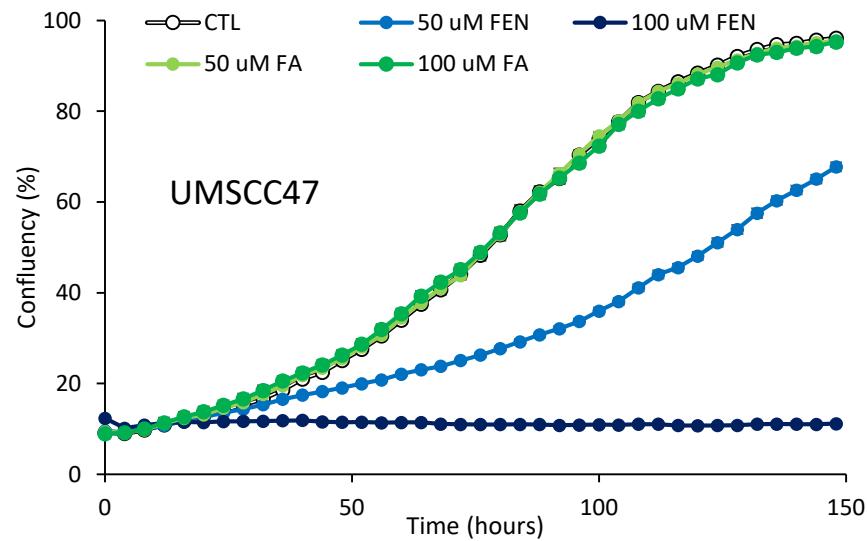

Table S1. Enriched and depleted KEGG pathways in response to HPV16E6E7 knockdown in UMSSC47 cells.
