

Figure S3.

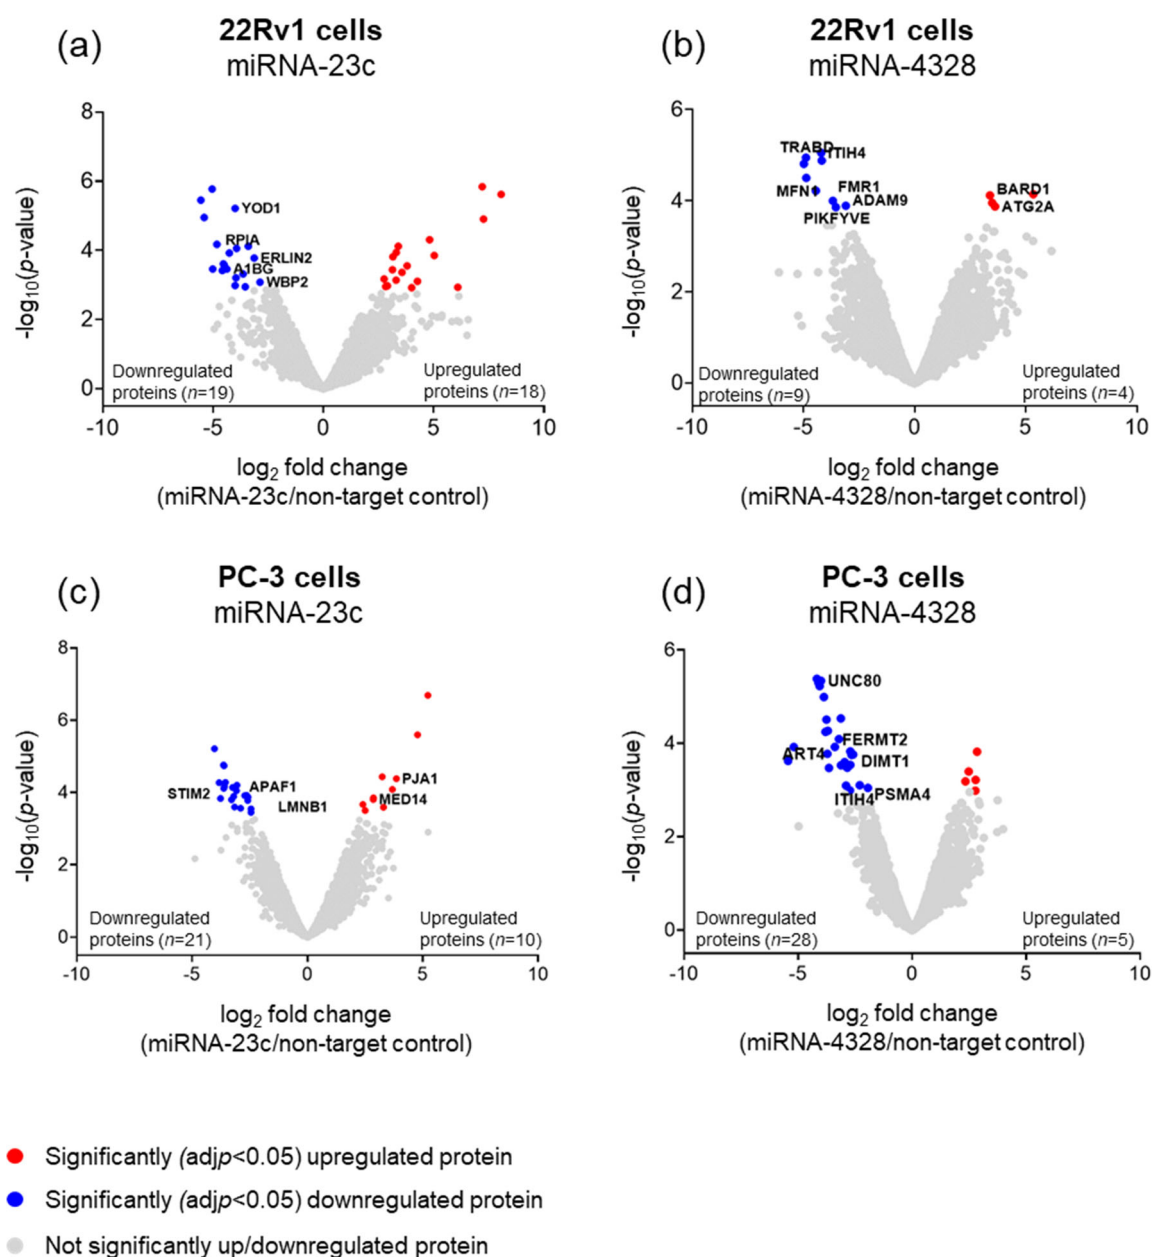

Figure S3. Volcano plots highlighting differentially expressed proteins following overexpression of miRNA-23c (a, c) or miRNA-4328 (b, d) in the 22Rv1 (a, b) and PC-3 (c, d) cell lines. Red and blue dots symbolize significantly up- and down-regulated proteins, respectively ($\text{adj}p < 0.05$, $n = 3$ single cell clones per cell line). Abbreviations indicate proteins being predicted as targets for the miRNA in the TargetScan (targetscan.org) database.
