## **Supporting Information**

Contents:

<sup>1</sup> H NMR signals ascribed to species <b>C-2</b>	S-1
<sup>1</sup> H-NMR signals of CH₃D	S-2
UV-vis spectrum of SBIZr-CH <sub>2</sub> SiMe <sub>3</sub> <sup>+</sup>	S-3
UV-vis spectra of SBIZr( $\mu$ -Me) <sub>2</sub> AIMe <sub>2</sub> <sup>+</sup> at +40°C and –20°C	S-4
Plot of ln[C-0] <sub>t</sub> vs. t	S-5
Plot of $\ln[C-1]_t$ vs. t	S-6
Effects of initial [Al]/[Zr] ratio	S-7

**Figure S-1**. <sup>1</sup>H NMR signals arising during polymerization of 1-hexene by the catalyst system described in Figure 1. First 4 traces (2.0, 3.6, 5.2 and 6.7 min mean time). Signals at 6.36, 5.67, 4.87 and 4.48 ppm (marked by \*), possibly due to polymer-carrying cations of type SBIZr- $\pi$ -(1-R-2-pol-C<sub>3</sub>H<sub>3</sub>)<sup>+</sup> (**10**).

Additional traces after ca. 20 min.

**Figure S-2**. <sup>1</sup>H NMR spectra of CH<sub>4</sub> and CH<sub>3</sub>D in solutions obtained by addition of an equivalent amount of trityl perfluorotetraphenyl borate to a solution of SBIZrMe<sub>2</sub> in toluene-d<sub>8</sub>, as described in Figure 3, after reaction times of ca. 4 h (bottom) and ca. 10 h (top).

**Figure S-3**. UV-vis spectra of a 0.8 mM solution of SBIZr(Me)-CH<sub>2</sub>SiMe<sub>3</sub> after addition of ca. 0.8 equiv. of trityl perfluorotetraphenyl borate.

**Figure S-4**. UV-vis spectra of a ca. 0.5 mM toluene solution of  $(SBI)Zr(\mu-Me)_2AIMe_2^+$ B(C<sub>6</sub>F<sub>5</sub>)<sub>4</sub><sup>-</sup> at +40°C (broken line) and at – 20°C (solid line).

**Figure S-5**. Plot of  $\ln[C-0]_t$  vs. *t* for reaction stage 1 (*t* < 120 s):

**Figure S-6**. Plot of ln[C-1]<sub>*t*</sub> vs. *t* for 300 s < *t* < 600 s

**Figure S-7**. Effects of initial [AI]/[Zr] ratio on the re-conversion of **C-2** ( $\lambda_{max}$  = 560 nm) to **C-0** ( $\lambda_{max}$  = 495 nm), conditions as described in Figure 1.
