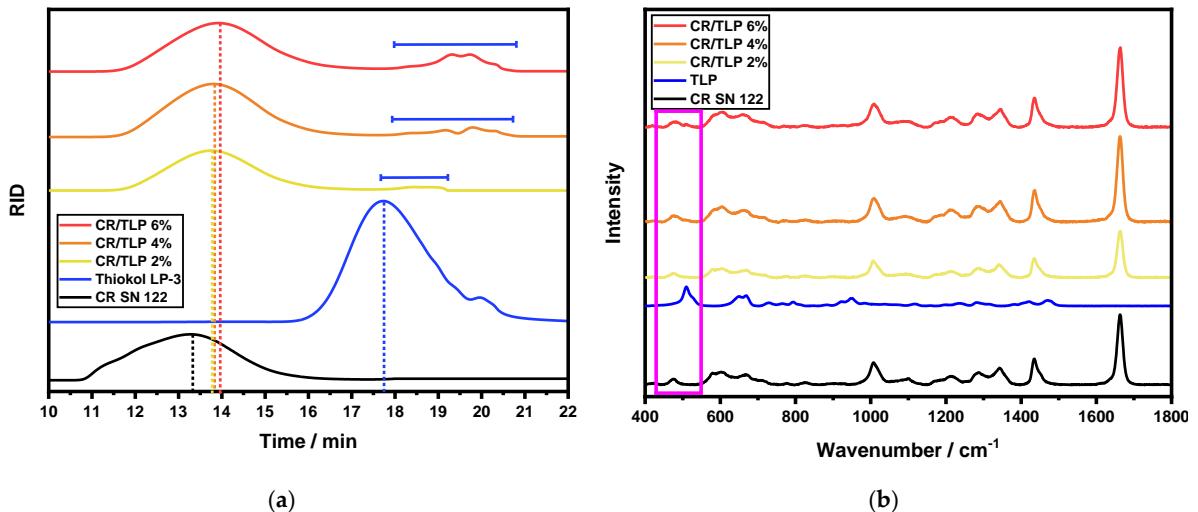

Figure S1. Formulations analysis comparison before curing between CR, Thiokol LP-3 and all compounds after mixing on the two roll mill: **(a)** GPC analysis; **(b)** Raman spectroscopy.

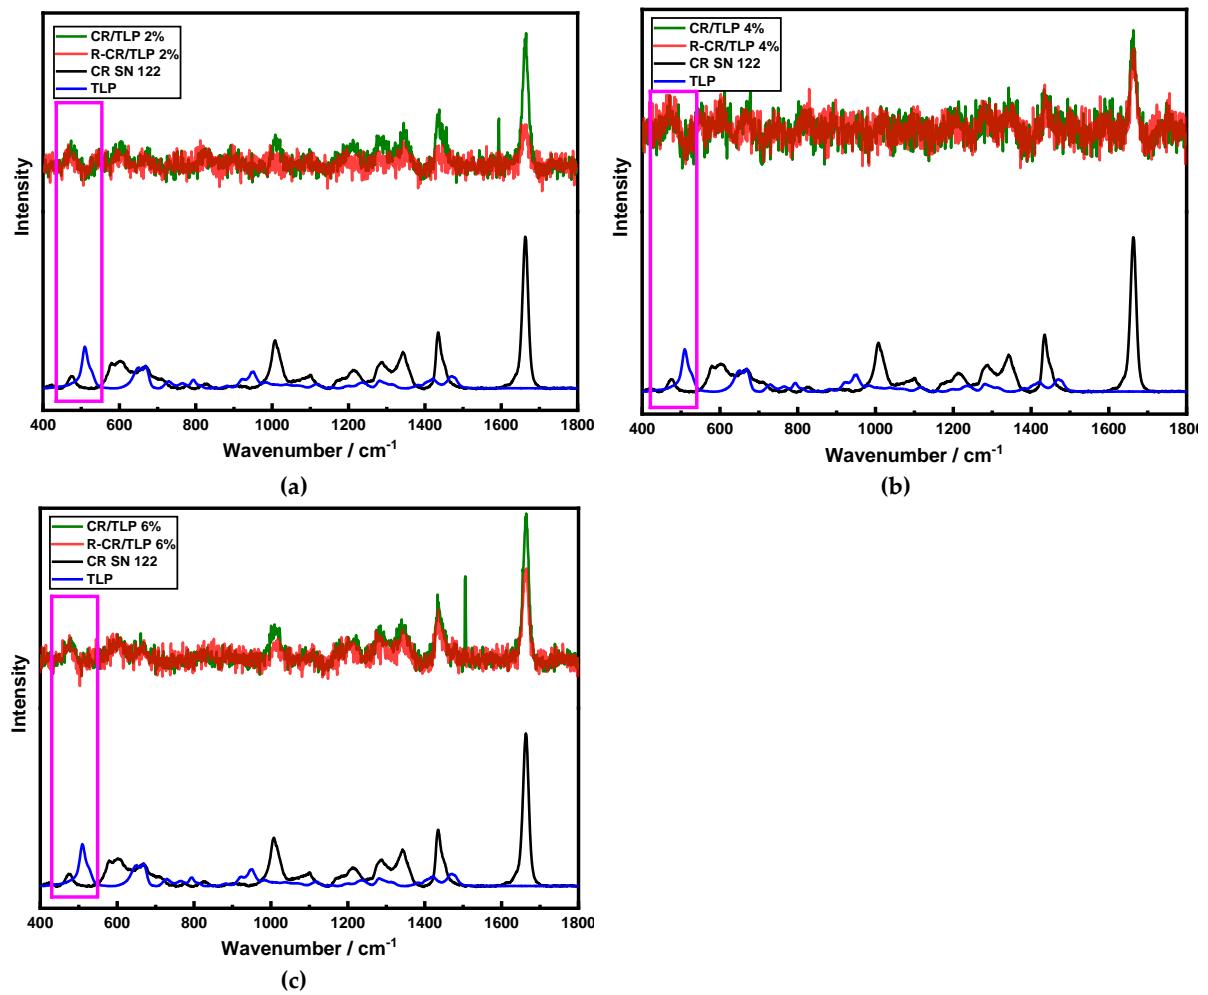

Figure S2. Raman analysis on cured compounds

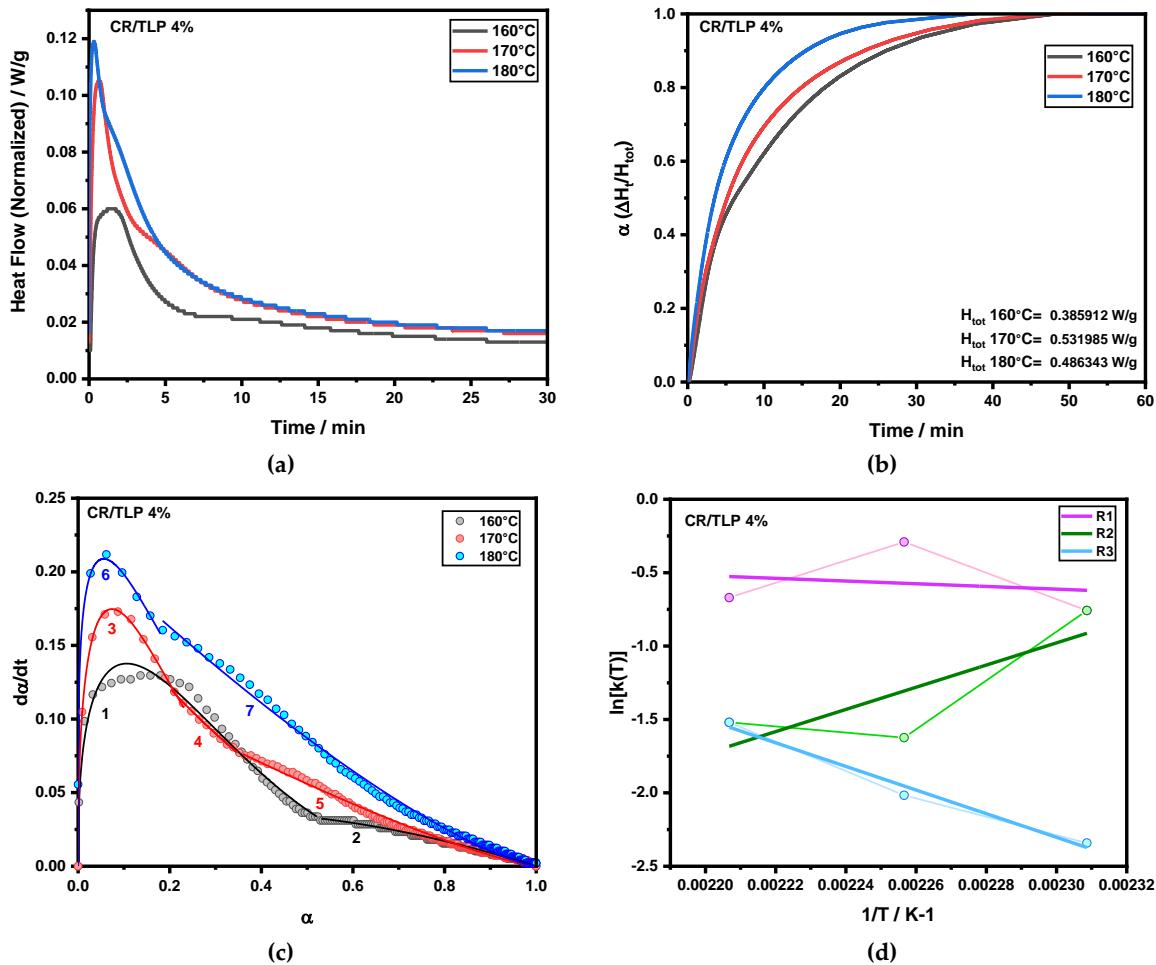

Figure S3. Kinetics and curing parameters derived from isothermal DSC analysis of compound CR/TLP 4%: (a) heat flow vs. time at temperatures of 160°C, 170°C and 180°C; (b) degree of cure calculated; (c) autocatalytic model fitting for the domains of Reaction 1 (R1), Reaction 2 (R2) and Reaction 3 (R3); the indices from 1 to 7 are related to the fitting parameters reported in Table S1; (d) activation energy, E_a , and pre-exponential factor k_0 obtained from the slope and intercept values, respectively, of the linear regression for three distinctive reactions occurring during curing.

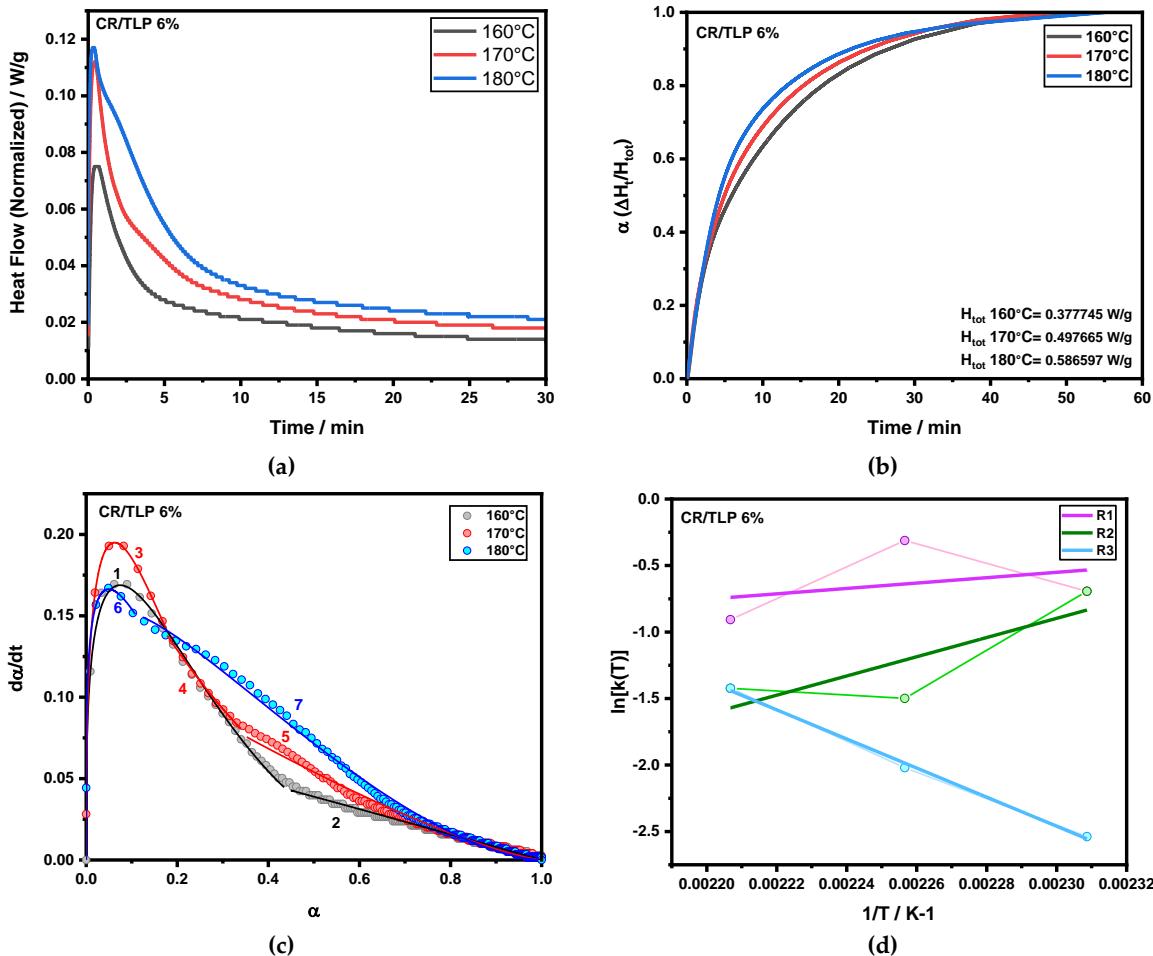

Figure S4. Kinetics and curing parameters derived from isothermal DSC analysis of compound CR/TLP 6%: (a) heat flow vs. time at temperatures of 160°C, 170°C and 180°C; (b) degree of cure calculated; (c) autocatalytic model fitting for the domains of Reaction 1 (R1), Reaction 2 (R2) and Reaction 3 (R3); the indices from 1 to 7 are related to the fitting parameters reported in Table S1; (d) activation energy, E_a , and pre-exponential factor k_0 obtained from the slope and intercept values, respectively, of the linear regression for three distinctive reactions occurring during curing.

Table S1: Kinetic parameters obtained from isothermal DSC analysis of CR/TLP 2%, CR/TLP 4% and CR/TLP 6%

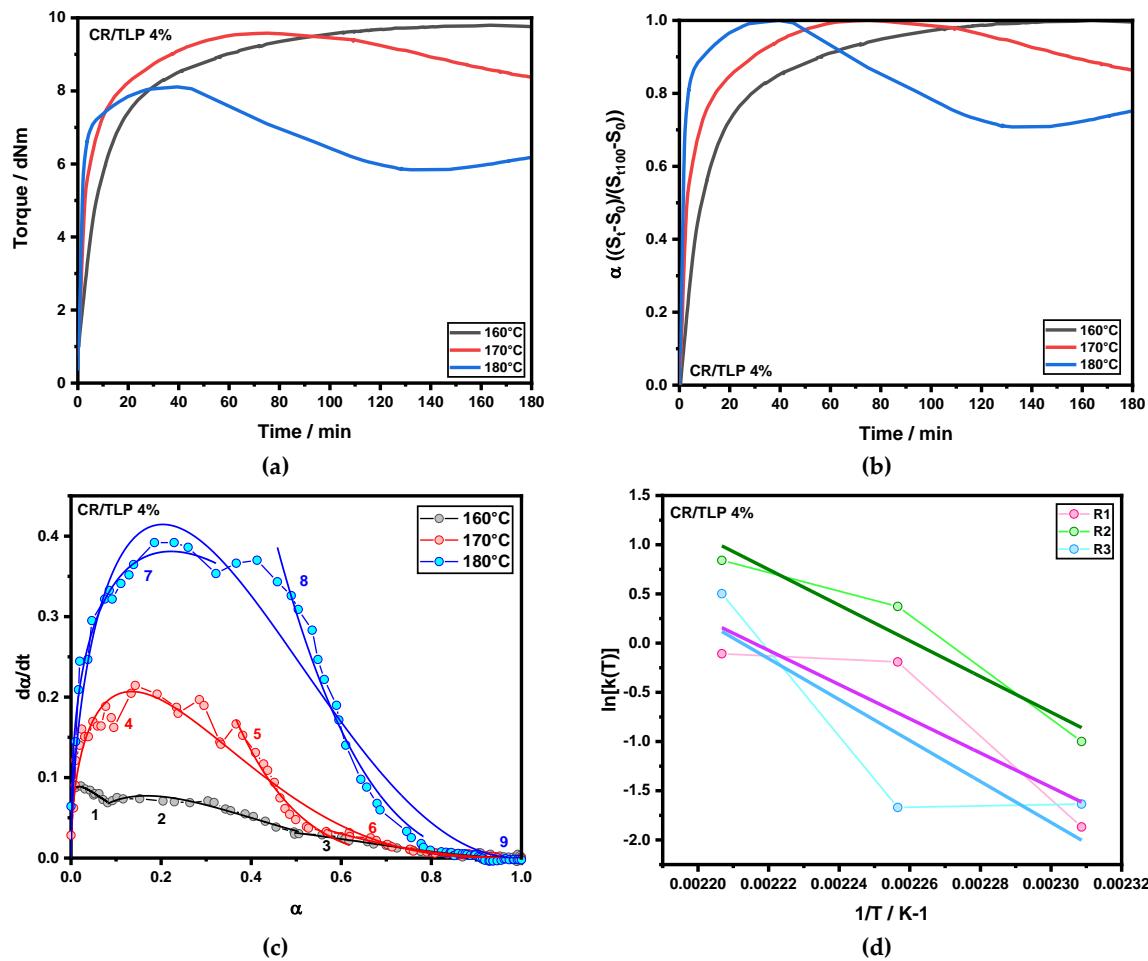

Figure S5. Kinetics and curing parameters derived from rheology of compound CR/TLP 4%: (a) Torque vs. time at temperatures of 160°C, 170°C and 180°C; (b) degree of cure calculated; (c) autocatalytic model fitting for the domains of Reaction 1 (R1), Reaction 2 (R2) and Reaction 3 (R3); the indices from 1 to 9 are related to the fitting parameters reported in Table S2; (d) activation energy, E_a , and pre-exponential factor k_0 obtained from the slope and intercept values, respectively, of the linear regression for three distinctive reactions occurring during curing.

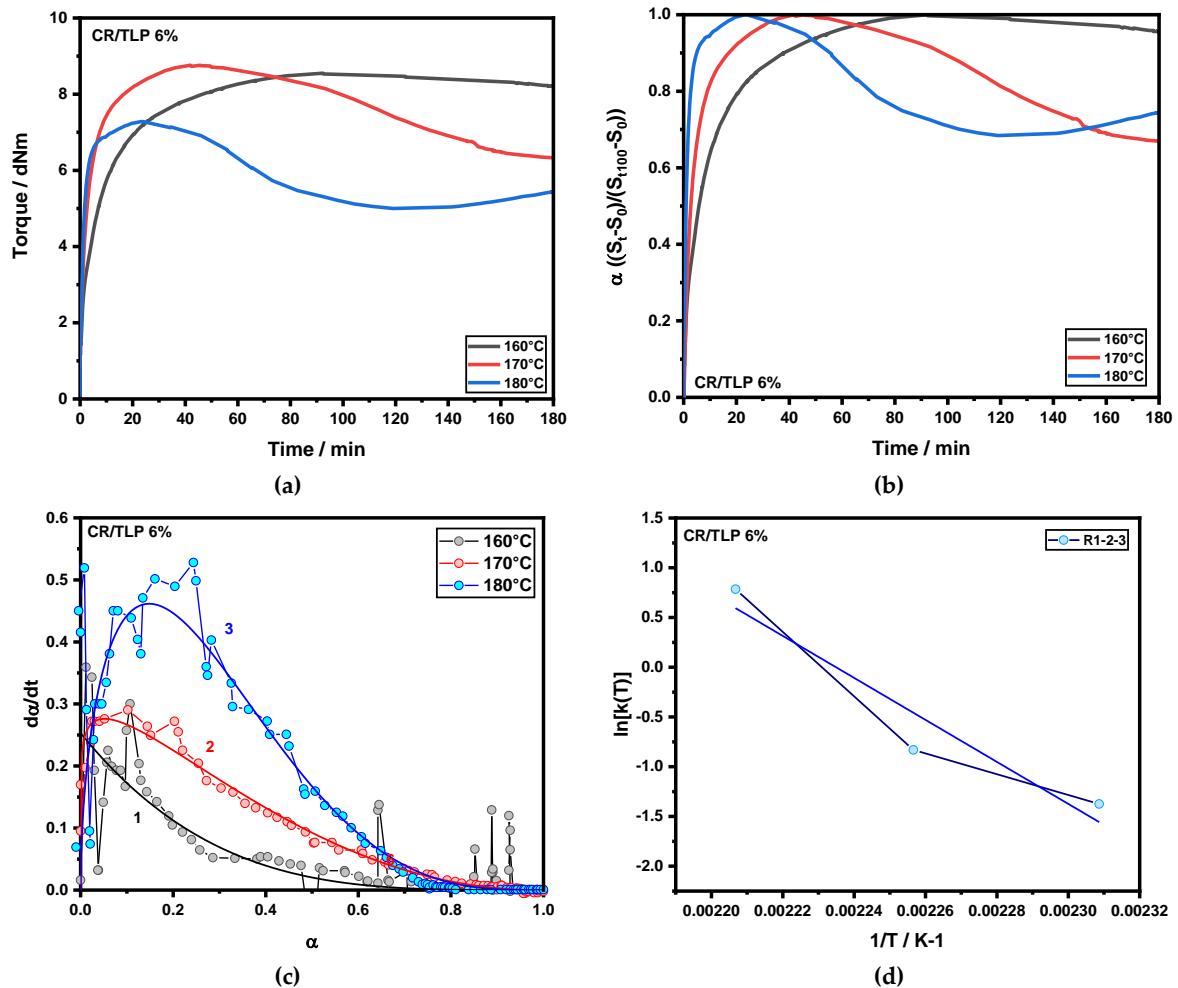

Figure S6. Kinetics and curing parameters derived from rheology of compound CR/TLP 6%: (a) Torque vs. time at temperatures of 160°C, 170°C and 180°C; (b) degree of cure calculated; (c) autocatalytic model fitting for one single domain where Reaction 1 (R1), Reaction 2 (R2) and Reaction 3 (R3) appears to be controlled by the same curing and kinetic parameters; the indices from 1 to 3 are related to the fitting parameters reported in Table S2; (d) activation energy, E_a , and pre-exponential factor k_0 obtained from the slope and intercept values, respectively, of the linear regression for three distinctive reactions occurring during curing.

Table S2: Kinetic parameters obtained from curing-Rheology analysis of CR/TLP 2%, CR/TLP 4% and CR/TLP 6%
