Table S1. The aggregative stability of CeGdO_{2-x} NPs via DLS study in different medium

	mQ	PBS (pH 7.4)	NaCl 0.9%	DMEM/F12	DMEM/F12+10% FBS
Z-среднее (d.nm)	6.4	10.5	15.6	60.12	8.9
PDI	0.231	0.366	0.433	0.372	0.323

Figure S1. Changes in zeta potential of CeGdO_{2-x} loaded capsules while layer by layer assembly. Layer 1st, 3rd, 5th: positively charge (poly-l- arginine). Layer 2nd, 4th, 6th: negatively charge (2nd and 6th dextran sulphate, 4th – citrate-stabilized CeGdO_{2-x} NPs) applied on calcium carbonate template
