Figure S1. μ-FTIR spectrum or Reference substrate. Dark cyan triangles stand for the PUR attributions: yellow and dark red stars highlight the signals due to non H-bonded absorptions and H-bonded absorptions respectively; red triangles highlight the signals due to photo-oxidation products.

Table S1. PUR-ET tentative of attributions in REF sample according to literature [La Nasa, J.; Biale, G.; Ferriani, B.; Colombini, M.P.; Modugno, F. A pyrolysis approach for characterizing and assessing degradation of polyurethane foam in cultural heritage objects. Red lines highlight the absorptions affected by the alteration process and in blue the absorption due the insurgence of new signals, ascribable to the R-OH formation.
