HD is heading date (days), PH is plant height (cm), NSPLM is number of spikes per linear meter (spikes  $\text{lm}^{-1}$ ), GWPLM is grain weight per linear meter ( $\text{g lm}^{-1}$ ), BWPLM is biological weight per linear meter ( $\text{g lm}^{-1}$ ), HI is harvest index (%), and TGW is thousand grain weight (g). Y1 (season 2017-2018), Y2 (season 2018-2019), L1 is salinity level 1, and L2 salinity level 2. \* Difference between parents using Duncan's test, means with the same letter are not significantly different.

**Table S2.** Reduction percentage (R%) and salinity tolerance index (STI) for parents and S42 population calculated for all studied traits.
