

## Supplementary

Figure S1. Visual appearance of peat, coir and six processed miscanthus substrates (bar = 1 cm). *Miscanthus x giganteus* was harvested with forage harvester (FC, field-chips), then processed with a mechanical fraying facility through a 5-mm screen (S5, shreds) or a hammermill with screen sizes of 15, 10, 5 and 3 mm (C15, C10, C5 and C3, chips).

Table S1. Substrate porosity: wet mass and bulk density of substrates at packing, porosity mean of substrates.

Substrate	Wet mass at packing	Bulk density at packing	Total porosity	Water holding capacity	Air-filled porosity
	(g g <sup>-1</sup> )	(g cm <sup>-3</sup> )	(%)	(%)	(%)
Peat	1.85 ± 0.16	0.263 ± 0.015	78.1 ± 1.8 e	67.7 ± 6.3 ab	10.4 ± 4.9 f
Coir	5.34 ± 0.15	0.086 ± 0.001	88.0 ± 3.6 d	70.2 ± 2.8 a	17.8 ± 6.3 e
C3	3.72 ± 0.06	0.106 ± 0.006	91.8 ± 1.3 bc	62.5 ± 4.1 b	29.2 ± 5.0 d
C5	3.84 ± 0.18	0.099 ± 0.006	95.6 ± 0.8 a	54.0 ± 5.3 c	41.6 ± 5.7 c
C10	3.60 ± 0.22	0.096 ± 0.002	95.2 ± 2.4 a	45.6 ± 2.4 d	49.7 ± 3.9 b

S5	3.11 ± 0.11	0.104 ± 0.003	94.5 ± 1.6 ab	43.7 ± 2.0 d	50.8 ± 2.3 ab
FC	2.64 ± 0.10	0.097 ± 0.002	91.3 ± 1.9 c	34.3 ± 2.8 e	57.0 ± 2.7 a

Different lower case letters indicate statistically significant differences in means among tested substrates at each column (Tukey's HSD,  $p \leq 0.05$ , mean ± standard deviation,  $n = 8$ ). *Miscanthus x giganteus* was harvested with forage harvester (FC, field-chips), then processed with a mechanical fraying facility through a 5-mm screen (S5, shreds) or a hammermill with screen sizes of 15, 10, 5 and 3 mm (C15, C10, C5 and C3, chips).

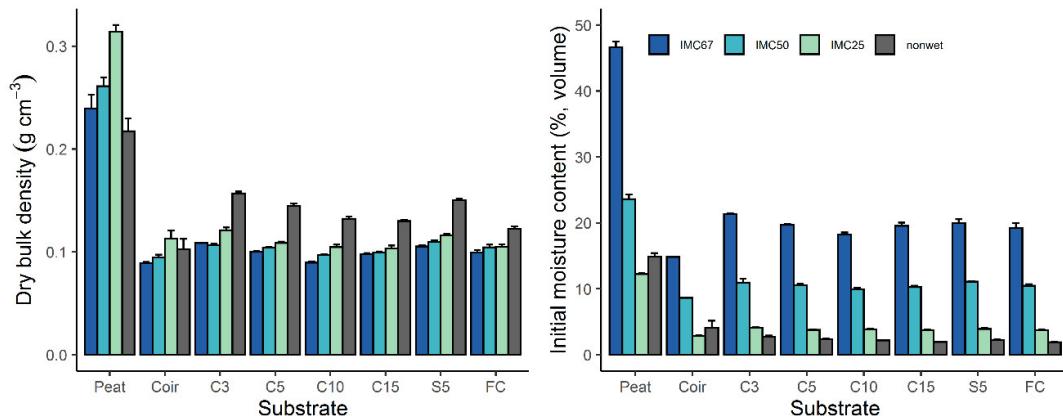

Figure S2. Substrate wettability: packing bulk density, initial moisture content of peat, coir and processed miscanthus substrates. *Miscanthus x giganteus* was harvested with forage harvester (FC, field-chips), then processed with a mechanical fraying facility through a 5-mm screen (S5, shreds) or a hammermill with screen sizes of 15, 10, 5 and 3 mm (C15, C10, C5 and C3, chips).

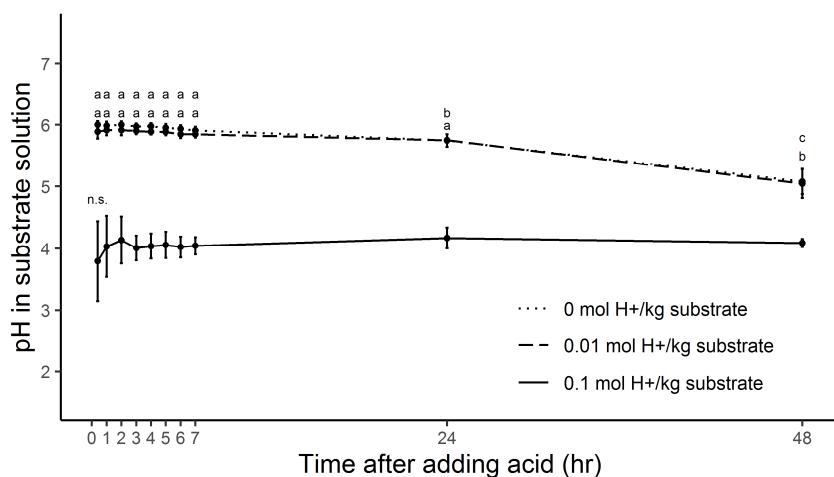

Figure S3. Substrate pH buffering capacity: time to pH stabilization. The curves represent mean values of S5 and C3. Different lower case letters indicate statistically significant differences in means among time points at each proton concentration (Tukey's HSD,  $p \leq 0.05$ , mean  $\pm$  standard deviation,  $n = 10$ ). The time at 24 hours after acid addition was selected as time when pH stabilization. At 48 hours after acid addition, fungal mycelium on surface of substrate suspension was observed.

Table S2. Nutrient concentration of input nutrient solution for seedling growth.
