

Supplementary Material

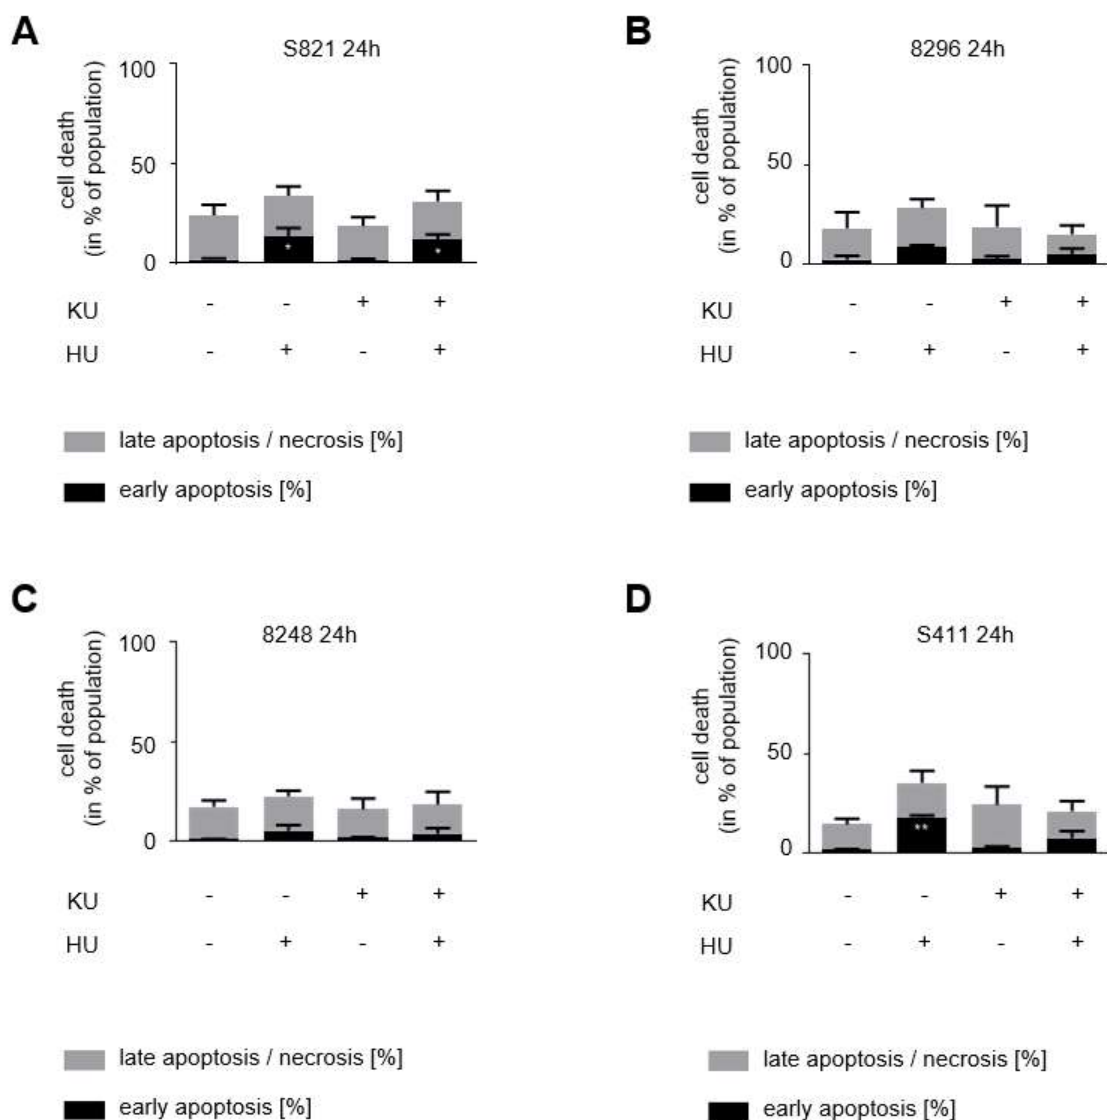

Figure S1. Impact of hydroxyurea and KU-60019 on PDAC cells after 24 h. Apoptosis analysis of (A) S821, (B) 8296, (C) 8248 and (D) S411 24 h after a treatment with 5 μ M KU-60019 \pm 1 mM hydroxyurea. Results were determined by flow cytometry using annexin-V-FITC staining and are shown as mean \pm SD (n=3). The differences in annexin-V positive cells were statistically analyzed using one-way ANOVA (*p<0.05, **p<0.01).
