Pathway analyses

Figure S1

Table S1

Table S2

Table S3

Table S4

Table S1: Full list of DE-miRNAs in the 28 selected studies. 113 DE-miRNAs were found differentially expressed either by qRT-PCR or RNAseq, in different regions of AD patient brains (Braak stage > IV). 53 of them were analysed by qRT-PCR and used for the meta-analysis. **Notes:** HC=Hippocampus, TC=Temporal Cortex, MTG=medial Temporal Gyrus, MFG = Medial Frontal Gyrus, FC = Frontal Cortex, CB = Cerebellum, FNC = Frontal Neo Cortex, STG = Superior temporal gyrus, BDE= Brain Derived Exosome, TL=Temporal Lobe, TNC= Temporal Neo Cortex, FNC=Frontal Neo Cortex, BA10= Brodmann Area 10, PFC= Pre Frontal Cortex, TG= Temporal Gyrus, LC= Locus Coeruleus, EC= Entorhinal Cortex, DG= Dentate Gyrus, BA9= Brodmann Area 9.

| miRNA | brain region | Braak stage | fold change | type of analysis | Reference |

Analysis of MiRNA Targets through DIANA Pathway Analysis

DIANA is the most extensive bioinformatics tool used for miRNA pathway analysis. The database applies algorithms to assess the biological significance of miRNA associations and predict their function via experimentally validated data in TarBase or in silico predicted targets in microT-CDS. This study aims to identify novel pathways so the microT-CDS database, which predicts miRNA targets in the 3'UTR and coding sequences of genes without experimental validation, was utilised. The 113 miRNAs identified either by qRT-PCR or RNAseq in the selected 28 studies were individually uploaded to DIANA and a superset of gene targets was identified. Where selected genes unite on a particular Kyoto Encyclopaedia of Genes and Genomes (KEGG) pathway with ($p < 0.05$), this was noted as statistically significant and potential role for miRNA regulation in AD were proposed.

All miRNA identified through the literature search checked for their unique identifiers through MirBase. The following are the miRNA identifiers that were entered into the DIANA database for KEGG pathway analysis: let-7b-3p, let-7d-3p, let-7f-5p, let-7i-5p, miR-100, miR-103, miR-107, miR-10a-5p, miR-1202, miR-122-5p, miR-124-3p, miR-125b, miR-127-3p, miR-128, miR-128a, miR-128b, miR-129-2-3p, miR-129-5p, miR-132-3p, miR-132-5p, miR-136-5p, miR-138-5p, miR-141-3p, miR-142-3p, miR-143-3p, miR-146, miR-146a, miR-150-5p, miR-155, miR-15b, miR-16, miR-16-2-3p, miR-17-5p, miR-184, miR-18a-5p, miR-190a-5p, miR-193a-5p, miR-195-5p, miR-199a-3p, miR-199b-3p, miR-200a-3p, miR-200b-5p, miR-200c-3p, miR-204-3p, miR-212-3p, miR-212-5p, miR-219-2-3p, miR-219-5p, miR-219a-2-3p, miR-223-3p, miR-2277-3p, miR-23a-3p, miR-26b-3p, miR-27a-3p, miR-27a-3p, miR-28-3p, miR-298, miR-29c, miR-30a-3p, miR-30e-3p, miR-3157-5p, miR-320a, miR-329, miR-338-5p, miR-346, miR-34a, miR-34c-3p, miR-3607-3p, miR-3613-3p, miR-362-3p, miR-365b-5p, miR-370, miR-374b-5b, miR-374c-3p, miR-375, miR-409-5p, miR-410, miR-424-3p, miR-425-5p, miR-4284, miR-433, miR-4410, miR-455-3p, miR-4661-5p, miR-4674, miR-483-3p, miR-483-5p, miR-486-3p, miR-487a, miR-487b, miR-495-3p, miR-5001-3p, miR-501-3p, miR-517b-3p, miR-520g-3p, miR-539-5p, miR-539-5p, miR-543, miR-548v, miR-550a-3p, miR-550b-2-5p, miR-582-5p, miR-584-5p, miR-603, miR-664-3p, miR-6722, miR-6858-5p, miR-7, miR-769-5p, miR-889-3p, miR-9, miR-92b-3p, miR-941.

Analysis of Proteins through DAVID Pathway Analysis

From the 26 included papers, a total of 169 different proteins were found to be differentially expressed in AD. These proteins are listed here: ACHE, AGER, AGT, AHNAK, AIF1, ALAD, AMY1A, ANXA5, APP, AQP4, ARNTL, ASAHI, BACE1, BAG3, BCR, C3, CASP3, CCL2, CCR1, CHGA, CLOCK, CLU, CP, CSNK1E, CTSB, DBI, DKK3, ESD, FGA, FGB, FGG, GJA1, H3F3A, HDGF, HIST1H1C, HIST1H1E, HP, HPX, HSPA1A, HSPB1, IGHA1, IGHG1, IGKC, ISYNA1, ITIH4, LGMN, MAOB, MAP4, MAPT, MARCKS, MECP2, MSI1, MSI2, NAMPT, NFKB1, NPTN, NUCKS1, ORM1, PADI2, PAICS, PBXIP1, PCBD1, PLIN3, PNPO, PRDX1, PRDX6, RAB5A, RAB7A, RBM15B, RIDA, S100A1, S100A11, S100A6, S100A9, SAA1, SELENBP1, SERPINA1, SERPINA3, SERPING1, SOCS4, SOCS7, SPR, STOM, TARDBP, TPD52L1, TREM2, TYROBP, ABCB1, ACTN2, ADAP1, AP1G1, APOE, BIN1, CADPS, CAP2, CIRBP, CORO1A, CORO2B, CRAT, CREB1, CREBBP, DLAT, DLG4, DNAJC6, DNM3, DUSP3, EEF1A1, EEF1B2, EP300, FARS, GAS7, GLS, GRPEL1, HGS, HOMER1, HSPA4L, IARS2, IDE, IDH3G, IPO7, KIAA0513, KIF5C, LONP1, LRPPR1, LRPPRC, LZTFL1, MAPRE3, METTL3, MME, NDUFA10, NECAB1, OAT, OGDH, OGDHL, OTUB1, OXCT1, PAFAH1B1, PDHX, PDIA3, PHYHIPL, PPME1, PPP2R1A, PREP, PRKRA, PTPA, RAP1GDS1, RGS7, RPH3A, SARS2, SCAI, SDR39U1, SGTB, SH3GL1, SLC2A3, SLIRP, SMS, SNAP25, STXBP1, STXBP3, SUCLA2, SUCLG1, TIMM44, TLN2, TRAP1, VPS35, YARS, YWHAG, YWHAH, YWHAQ

The identified DE-proteins were uploaded to the DAVID database to perform enrichment analysis and pathway identification. Within the DAVID database, the KEGG pathway maps were used to identify the protein pathways that the uploaded DE protein list was associated with. All proteins were uploaded as a gene list under the species "Homo sapiens". Following the pathway tab in the annotation summary results, the KEGG_PATHWAY chart was selected. Despite all 169 protein IDs being recognised only 99 were associated with KEGG pathways that yielded a total of 164 different KEGG pathways. To determine which pathways were the most significant, functional enrichment analysis was performed using a minimum gene count ≥ 3 and a maximum EASE score of 0.1.

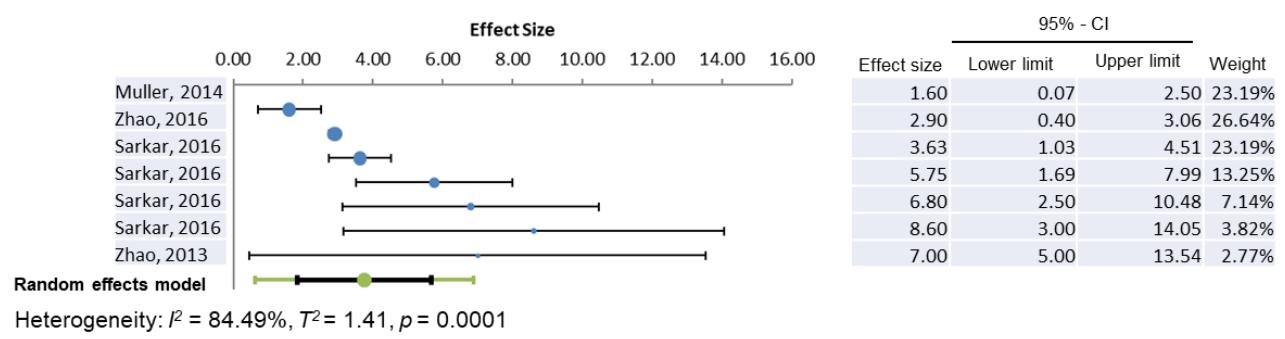

Figure S1. Meta analysis for miR-146a (upregulated miRs).
