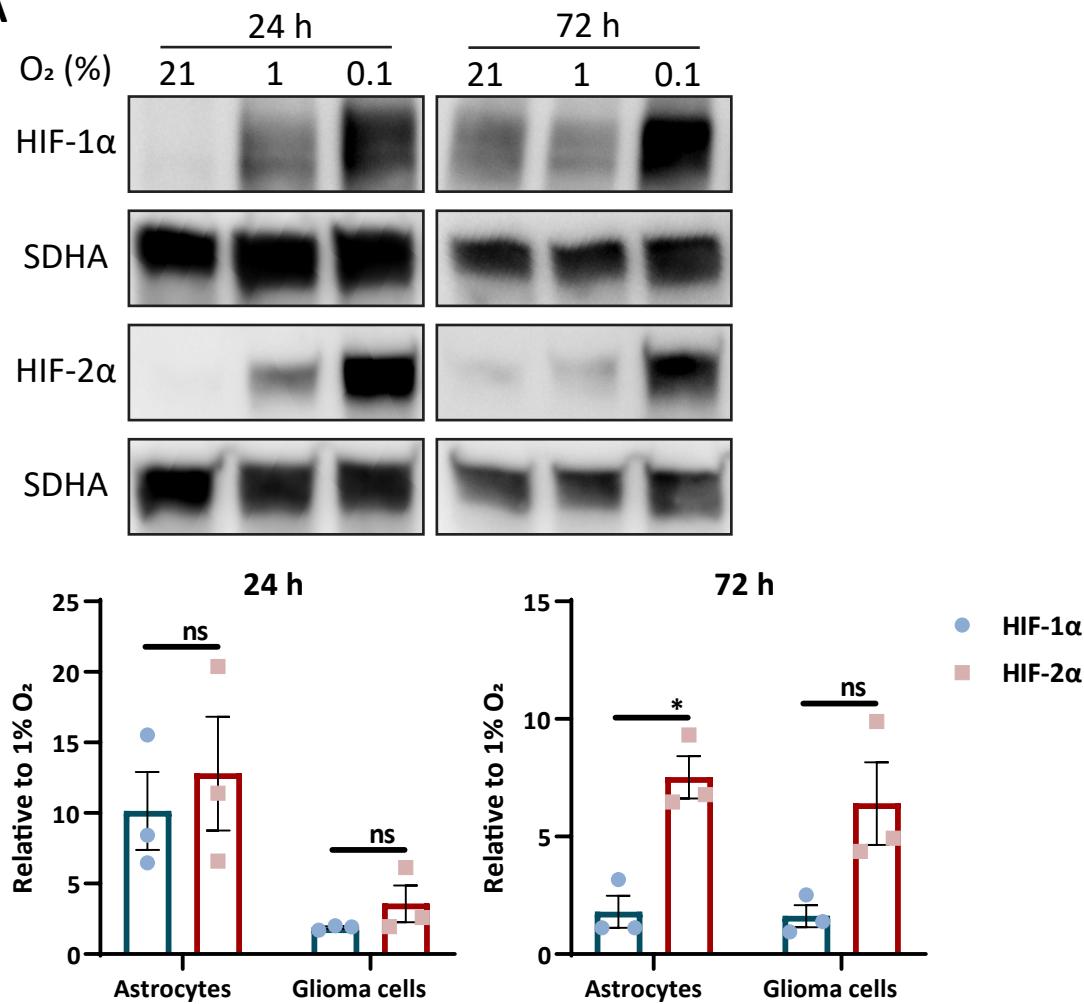

Figure S1. Astrocytes stabilize HIF-2 α more efficiently compared to HIF-1 α after exposure

to extreme hypoxia

(A) Representative images of western blots showing HIF-1 α , HIF-2 α , and SDHA (loading control) expression in U251MG cells cultured for 24 or 72 h at 21%, 1% or 0.1% O₂. The graphs show quantification of HIF-1 α and HIF-2 α signal in astrocytes (Figure 1A) and U251MG cells cultured at 0.1% O₂ relative to 1% O₂. *p < 0.05; ns, non-significant, two-way ANOVA (Tukey's multiple comparisons test). Data represent mean \pm SEM from three independent experiments.
