

Supplementary Figure S1. Growth rate of *E. histolytica* siEhDUF2419 trophozoites.

40*10³ control trophozoites and siEhDUF2419 trophozoites were grown for 24 hours or 48 hours in 15-mL tube with/without 0.1μM queuosine. The number of viable trophozoites was determined by eosin dye exclusion. The data represent two independent experiment that were repeated twice. p-value > 0.05 by an unpaired Student *t* test.
