

Figure S1

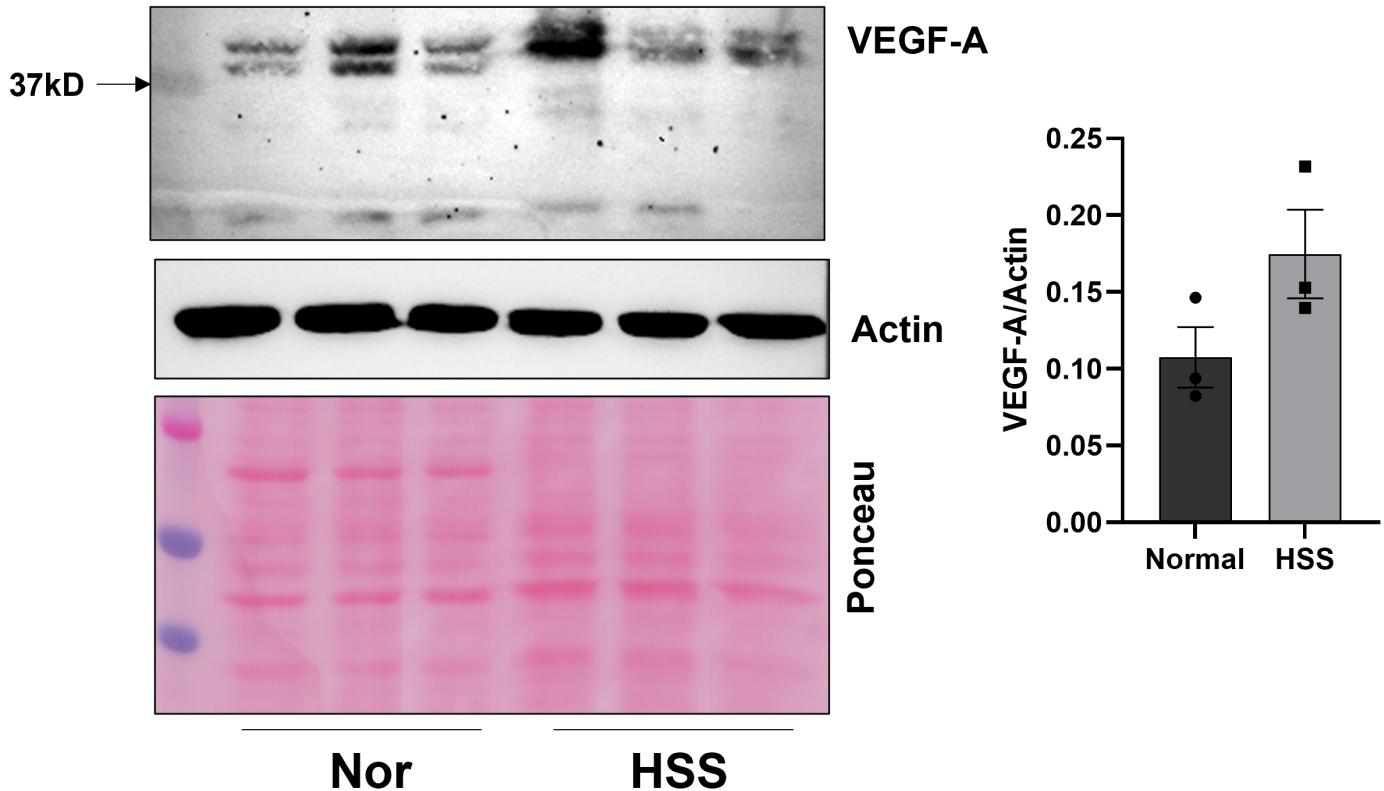

Figure S1. Total VEGF-A levels in normal vs. HSS HUVECs. Western blot analysis of VEGF-A using a pan-VEGF-A antibody that recognizes all the VEGF-A isoforms (Pro- and Anti-Angiogenic VEGF-A isoforms) in normal (Nor) and HSS (Hypoxia Serum Starved, for 24h) HUVECs. n=3. Unpaired T-Test. *P<0.05 considered significant. Data Mean±SEM

Figure S2: HSS HUVECs

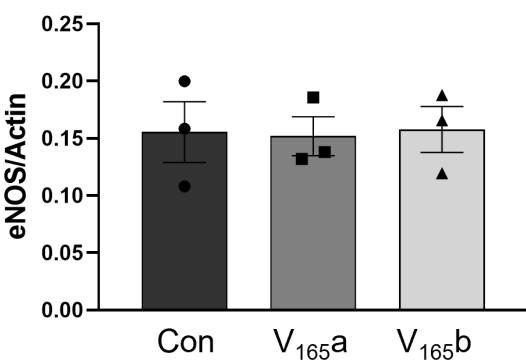

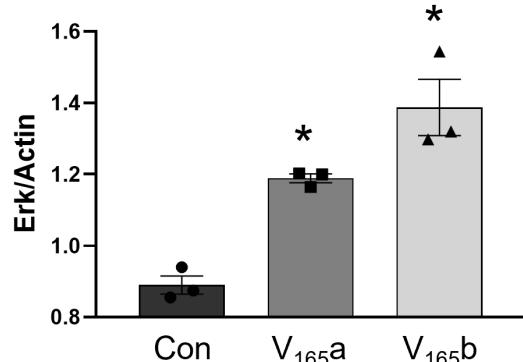

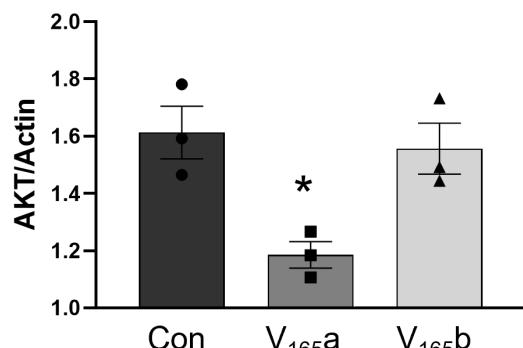

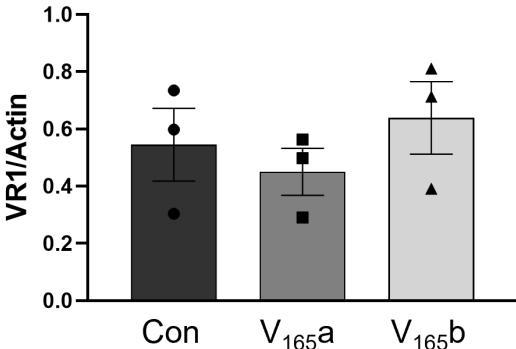

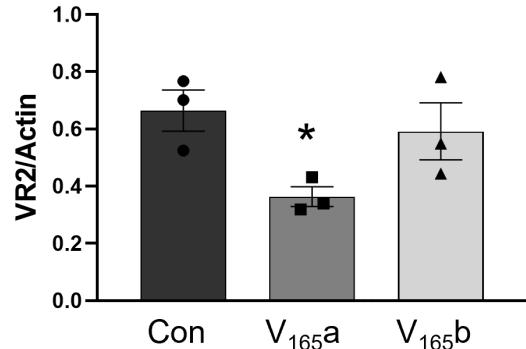

Figure S2. VEGF₁₆₅a and VEGF₁₆₅b differentially regulate total VEGFR2, AKT and ERK levels: Western blot analysis of VEGFR2 (VR2), AKT, ERK, eNOS, VR1 in HSS HUVECs treated with VEGF₁₆₅a (V₁₆₅a) or VEGF₁₆₅b (V₁₆₅b). n=3, One-way ANOVA with Bonferroni select pair comparison. *P<0.05 considered significant. Data Mean±SEM

Figure S3

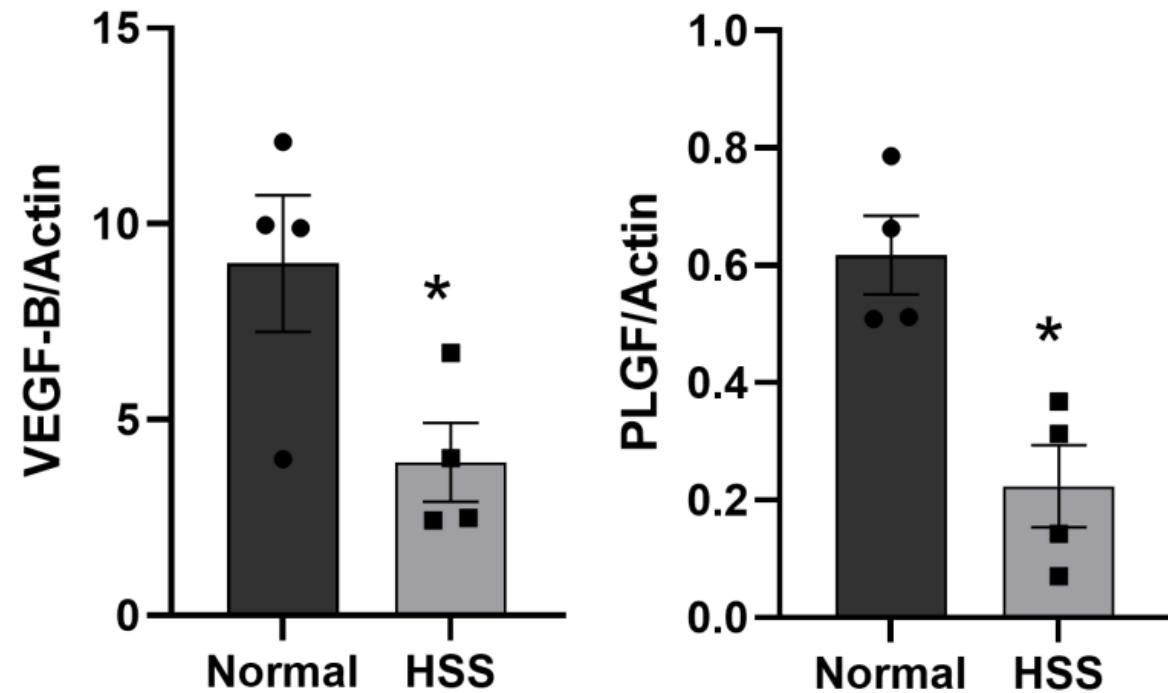

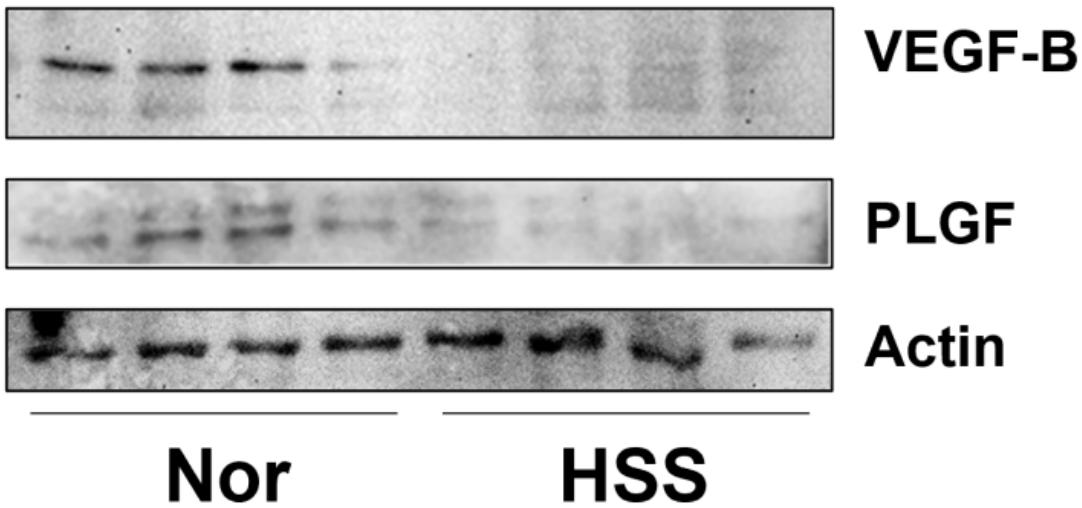

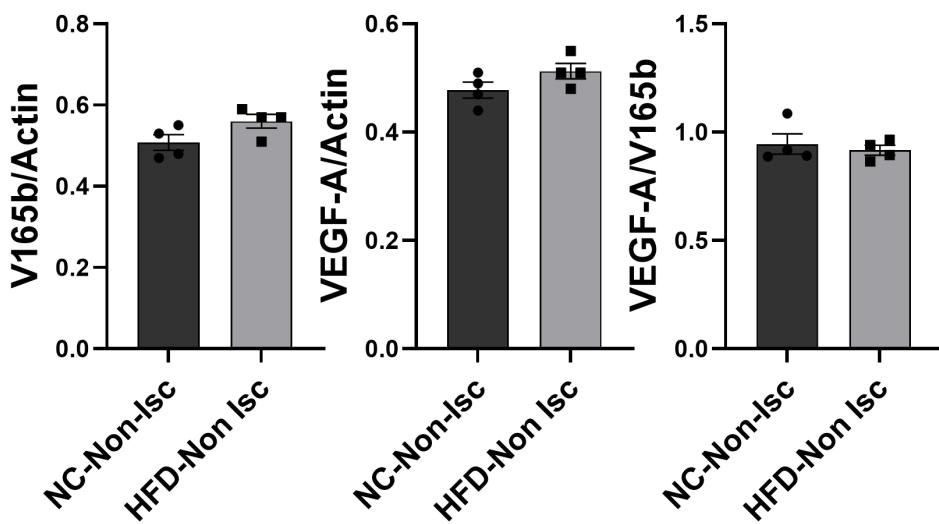

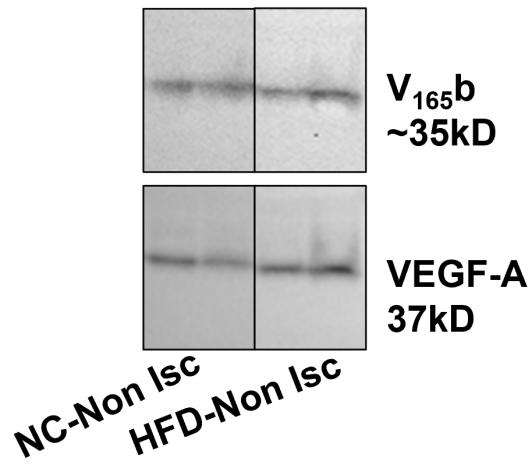

Figure S3. HSS decreases VEGF-B and PLGF levels in HUVECs: Western blot analysis of VEGF-B and PLGF in normal and HSS HUVECs. n=4, Unpaired T-test. *P<0.05 considered significant. Data Mean \pm SEM

Figure S4

A

B

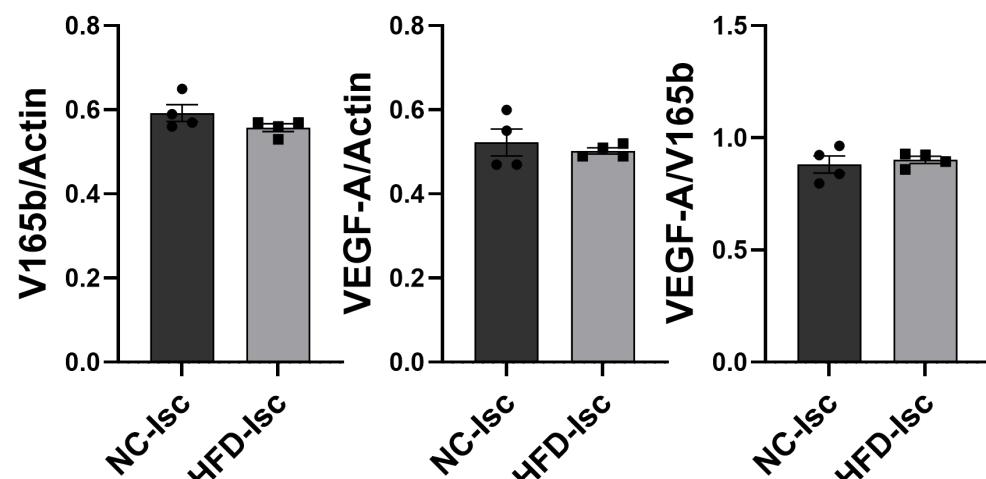

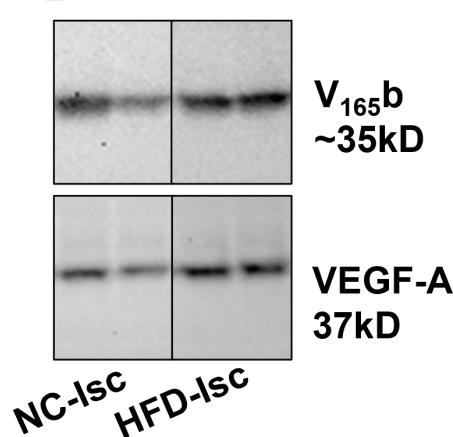

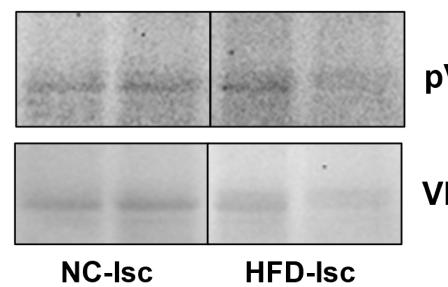

Figure S4. VEGF-A and VEGF₁₆₅b levels in normal chow and T2D-PAD model. Immunoblot analysis of VEGF₁₆₅b (V₁₆₅b) and total VEGF-A expression in A) non-ischemic gastrocnemius muscle (Non-Isc) of C57BL/6 mice on normal chow (NC) or high-fat diet (HFD). n=4, Unpaired T-test, and B) ischemic gastrocnemius muscle (Isc) of C57BL/6 mice on normal chow (NC) or high-fat diet (HFD) at day-3 post-HLI. n=4, Unpaired T-test. *P<0.05 considered significant. Data Mean±SEM.

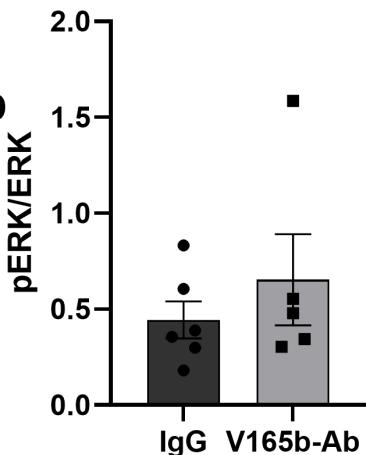

Figure S12. VEGF₁₆₅b inhibition decreased AKT activation in Mg-Tg mice ischemic muscle: Western blot analysis of A) pAKT, AKT and B) pERK, ERK in IgG or VEGF₁₆₅b-Ab treated Mg-Tg mice ischemic muscle. n=7, Unpaired T-test. *P<0.05 considered significant. Data Mean±SEM

Figure S13

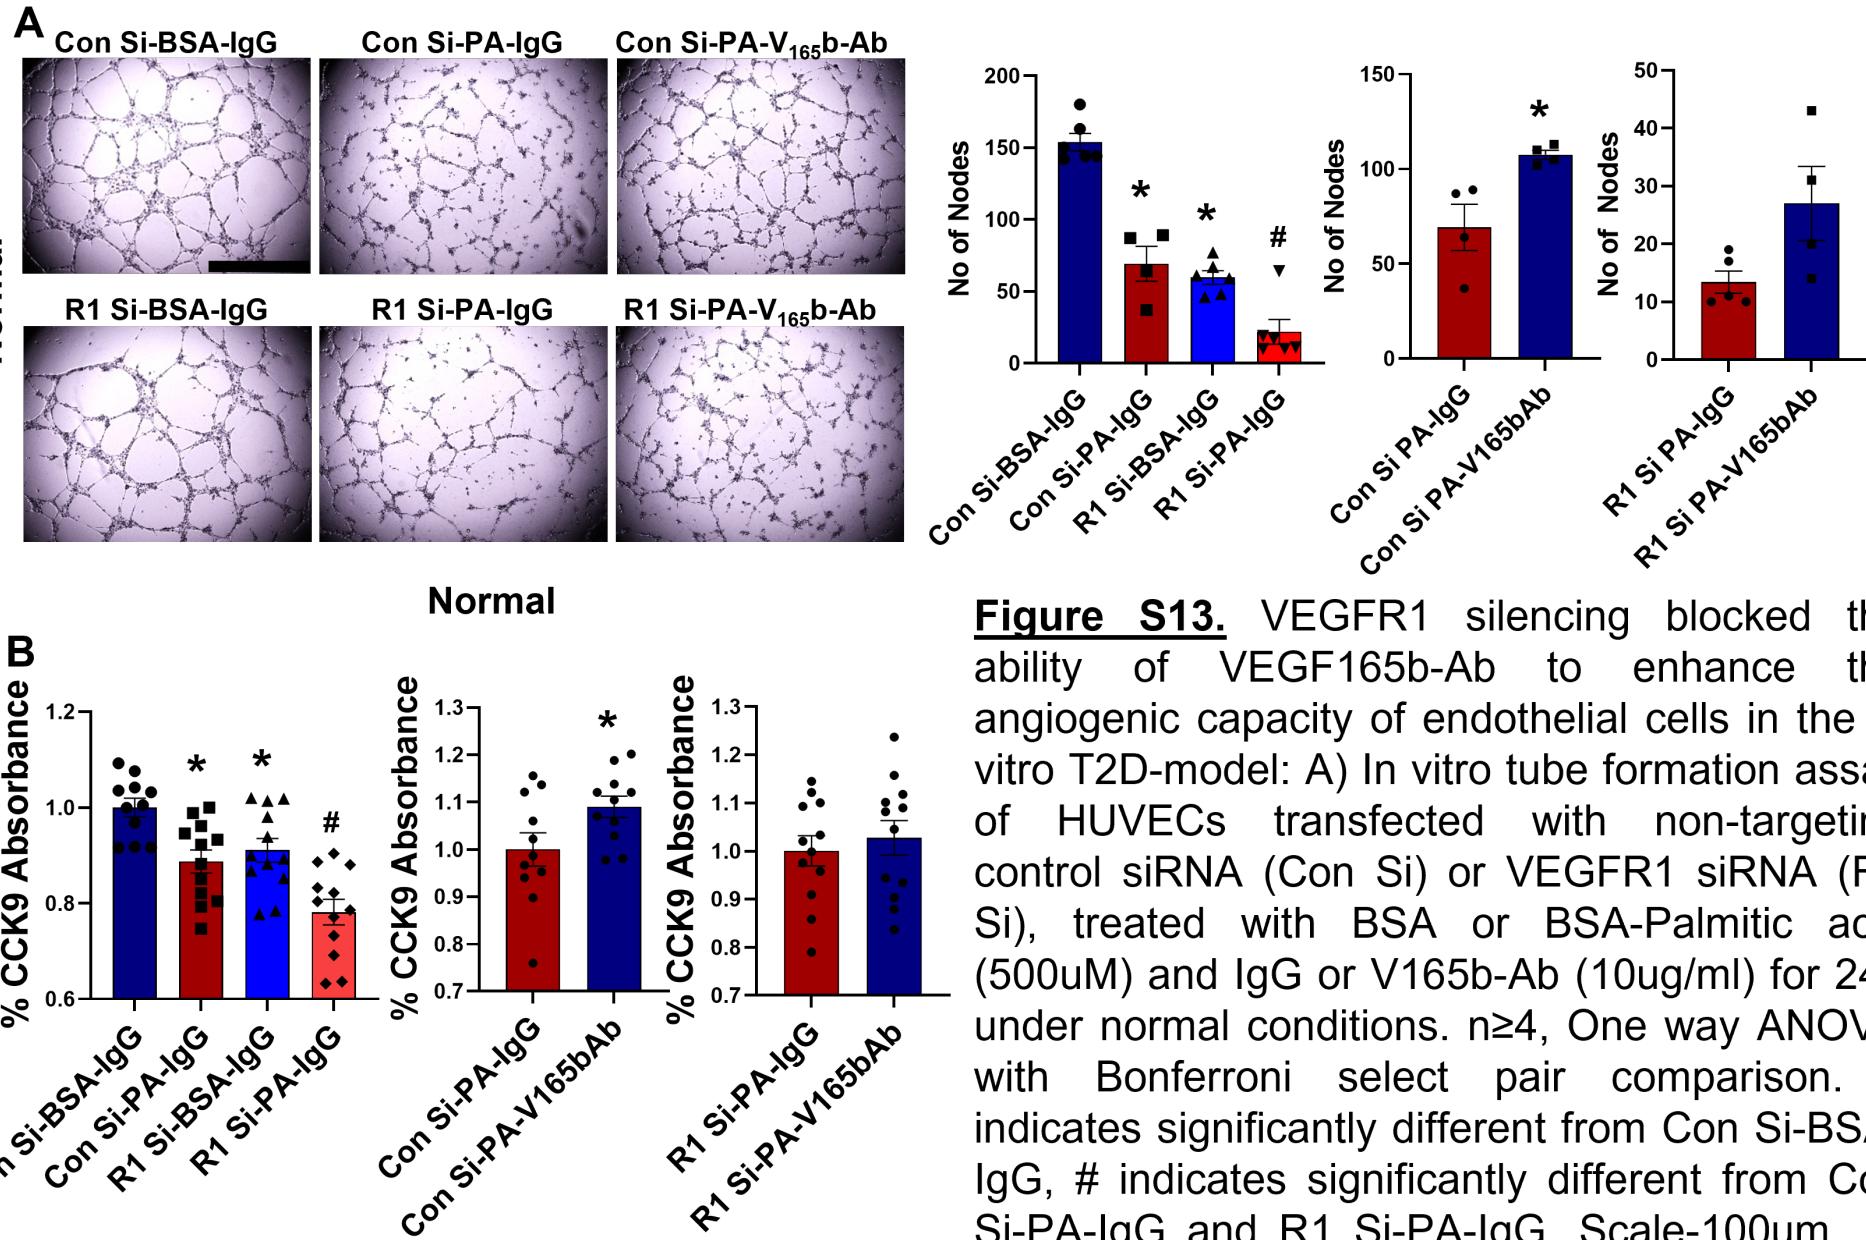

Figure S13. VEGFR1 silencing blocked the ability of VEGF165b-Ab to enhance the angiogenic capacity of endothelial cells in the in vitro T2D-model: A) In vitro tube formation assay of HUVECs transfected with non-targeting control siRNA (Con Si) or VEGFR1 siRNA (R1 Si), treated with BSA or BSA-Palmitic acid (500uM) and IgG or V165b-Ab (10ug/ml) for 24h under normal conditions. n≥4, One way ANOVA with Bonferroni select pair comparison. * indicates significantly different from Con Si-BSA-IgG, # indicates significantly different from Con Si-PA-IgG and R1 Si-PA-IgG. Scale-100um. B) Cell proliferation/survival assay of HUVECs transfected with non-targeting control siRNA

(Con Si) or VEGFR1 siRNA (R1 Si), treated with BSA or BSA-Palmitic acid and IgG or V165b-Ab for 24h under normal growth conditions, n≥11, One way ANOVA with Bonferroni select pair comparison * indicates significantly different from Con Si-BSA-IgG, # indicates significantly different from Con Si-PA-IgG and R1 Si-PA-IgG. Unpaired T-test for IgG vs. V165b-Ab comparisons. *P<0.05 considered significant. Data Mean±SEM

Figure S14

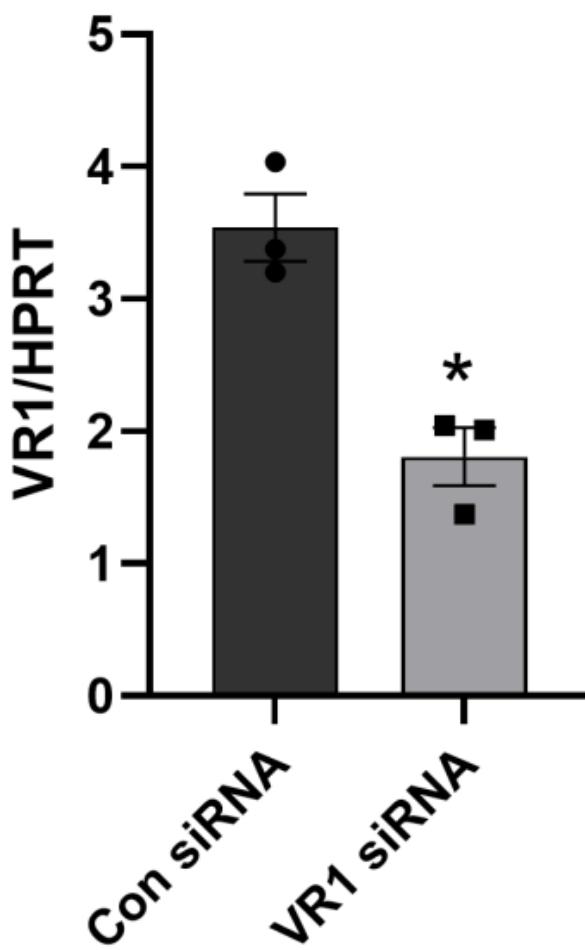

Figure S14. qPCR confirming silencing in HUVECs transfected with VEGFR1 siRNA: qPCR analysis of VEGFR1 expression in non-targeting siRNA or VEGFR1 siRNA treated HUVECs. n=3, Unpaired T-test. *P<0.05 considered significant. Data Mean±SEM

Figure S15

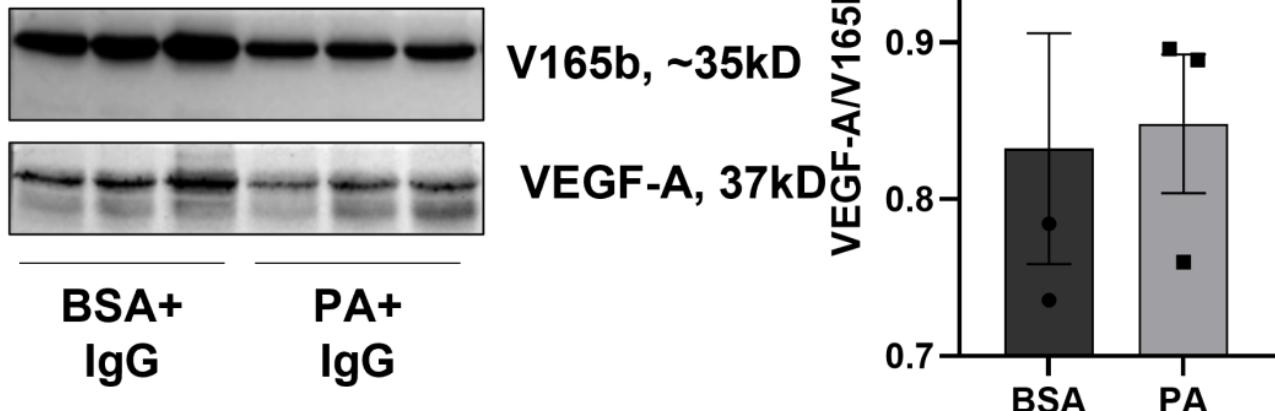

Figure S15. Palmitic acid did not induce significant differences in VEGF₁₆₅b vs. VEGF-A levels in HSS HUVECs: Western blot analysis of VEGF₁₆₅b and VEGF-A in HUVECs treated with BSA or PA under HSS conditions. n=3, Unpaired T-test. *P<0.05 considered significant. Data Mean±SEM

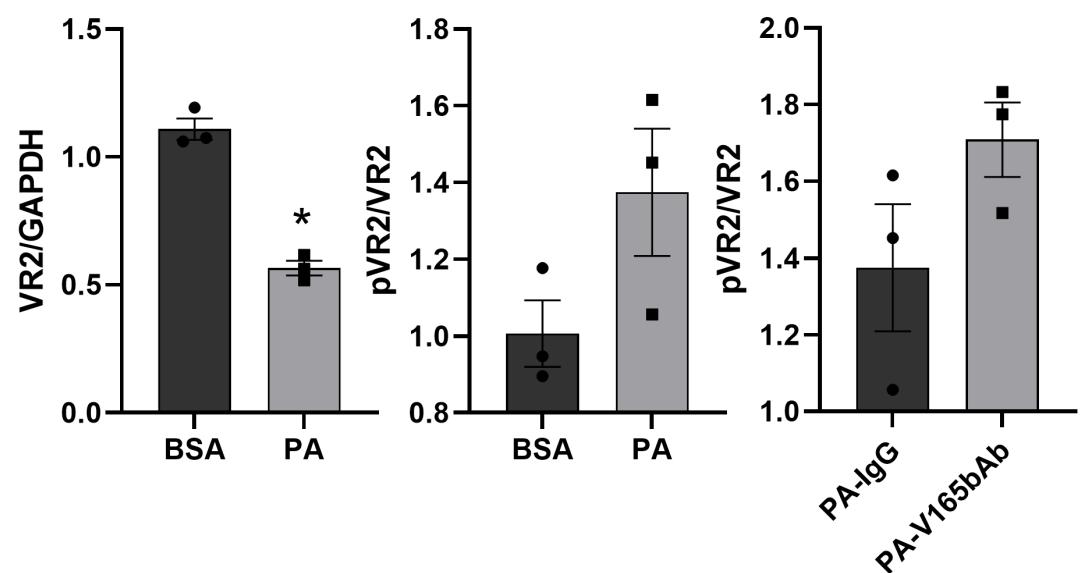

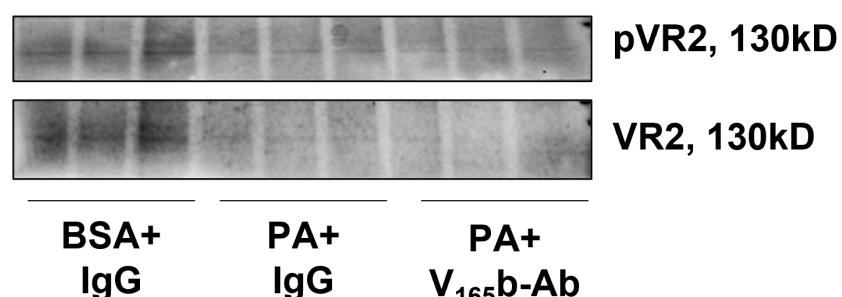

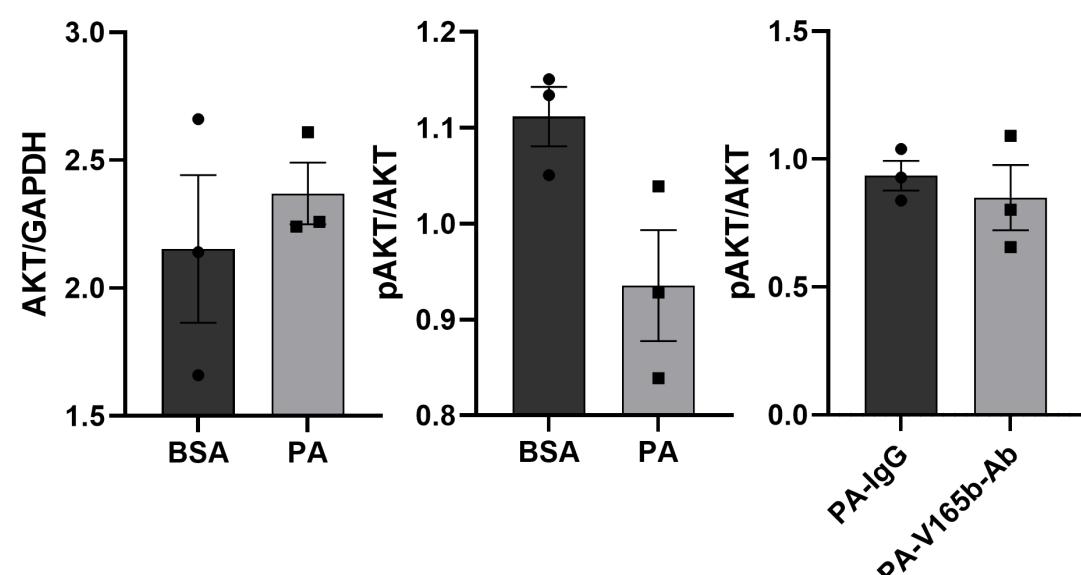

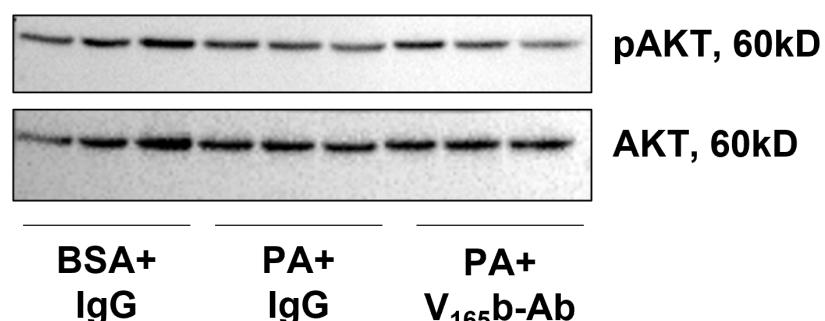

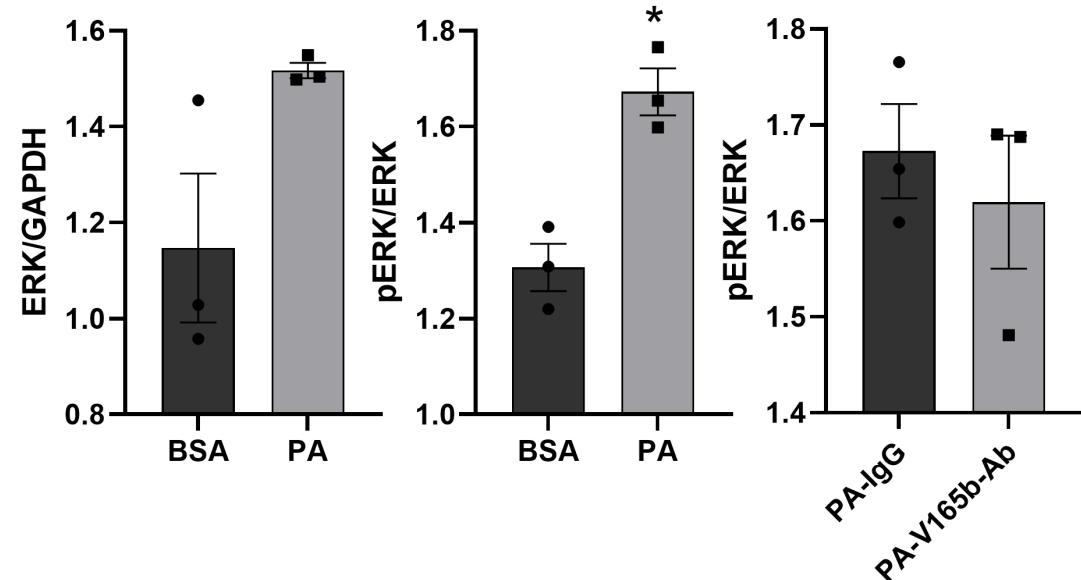

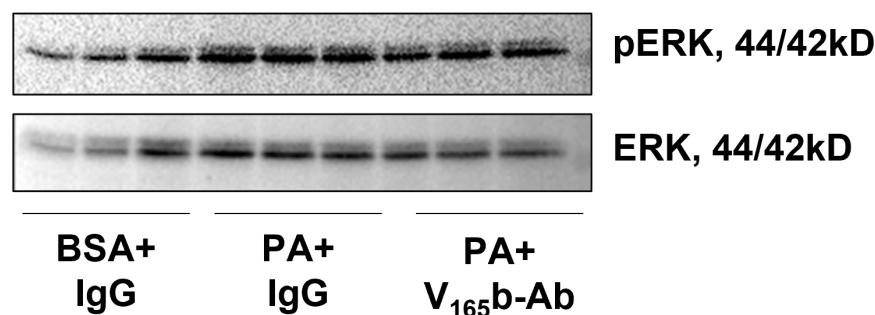

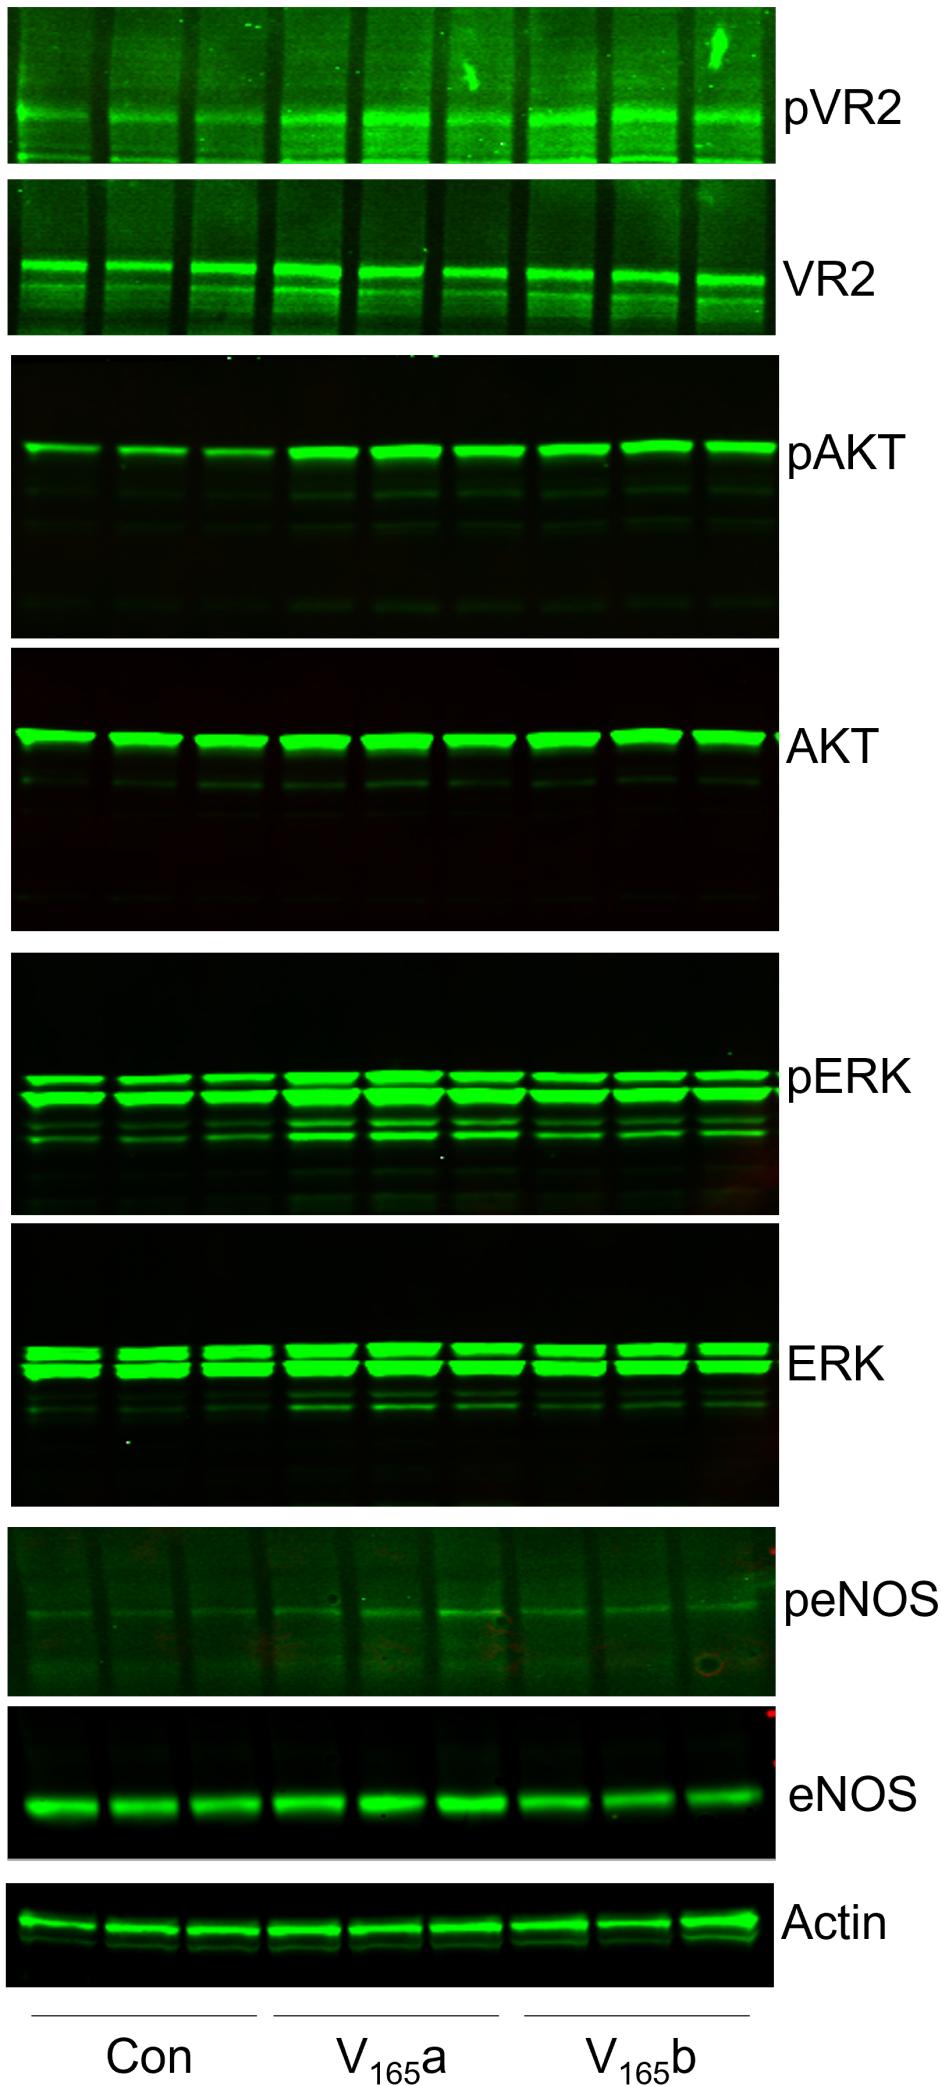

Figure S16**A****B****C**

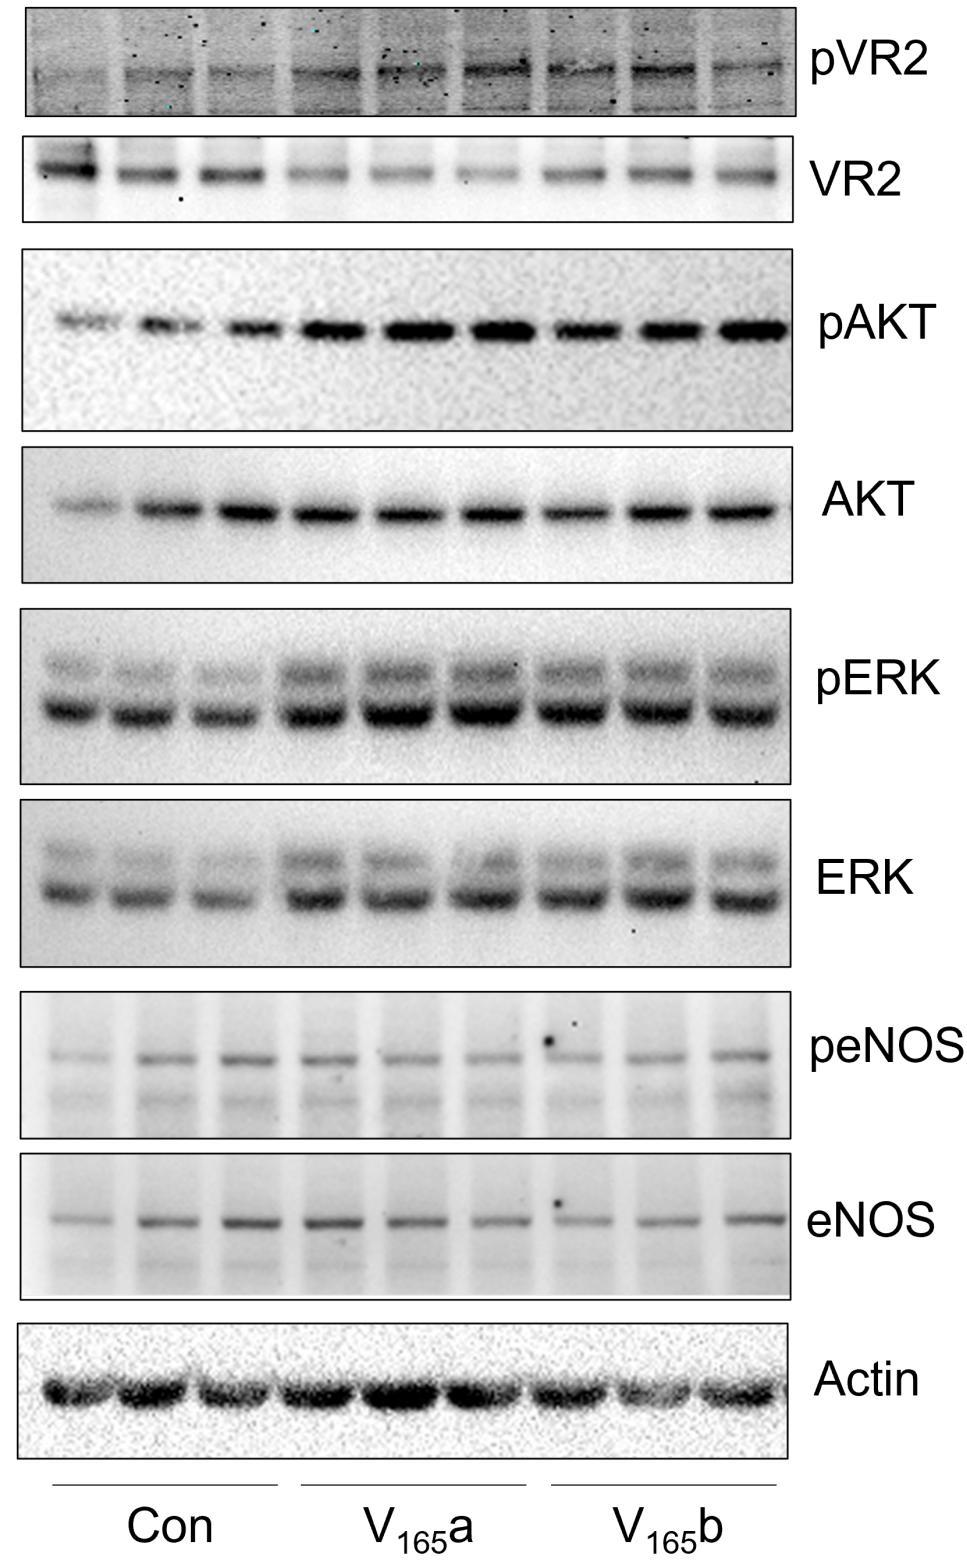

Figure S16. VEGF165b-inhibition does not induce VEGFR2-signaling in in vitro diabetic-PAD model: Western blot analysis of A) pVR2/VR2, B) pAKT/AKT, C) pERK/ERK in HSS-HUVECs treated with BSA+IgG, PA+IgG, PA+V₁₆₅b-Ab. n=3, Unpaired T-test. *P<0.05 considered significant. Data Mean±SEM
