MicroRNAs are human microRNAs (*hsa-miR*) unless otherwise specified. Some assays were designed for murine miRNAs, but in these cases the miRNA was completely homologous. PCOS (FF): Levels in follicular fluid associated with PCOS. PCOS (circulating): Levels in circulation associated with PCOS. NAFLD: Non-alcoholic fatty liver disease.

Supplementary Table S2: Change in miRNA levels in women without PCOS from BL to FU.

miRNA Control	Reported association	Difference in dCt (\pm SD)	Direction	n	p	p _{adj}

Supplementary Table S2: Changes in miRNA levels from BL to FU in control women. Shown are the mean fold change \pm standard deviation as well as the number of women included. Changes in expression levels were evaluated with a paired student t-test. *) also reported in PCOS women in the current study. P values were corrected for multiple testing using Bonferroni corrections. PCOS (FF): Levels in follicular fluid associated with PCOS, PCOS (circulating): Levels in circulation associated with PCOS. Ovarian cancer (circulating): Circulating biomarker of ovarian cancer.

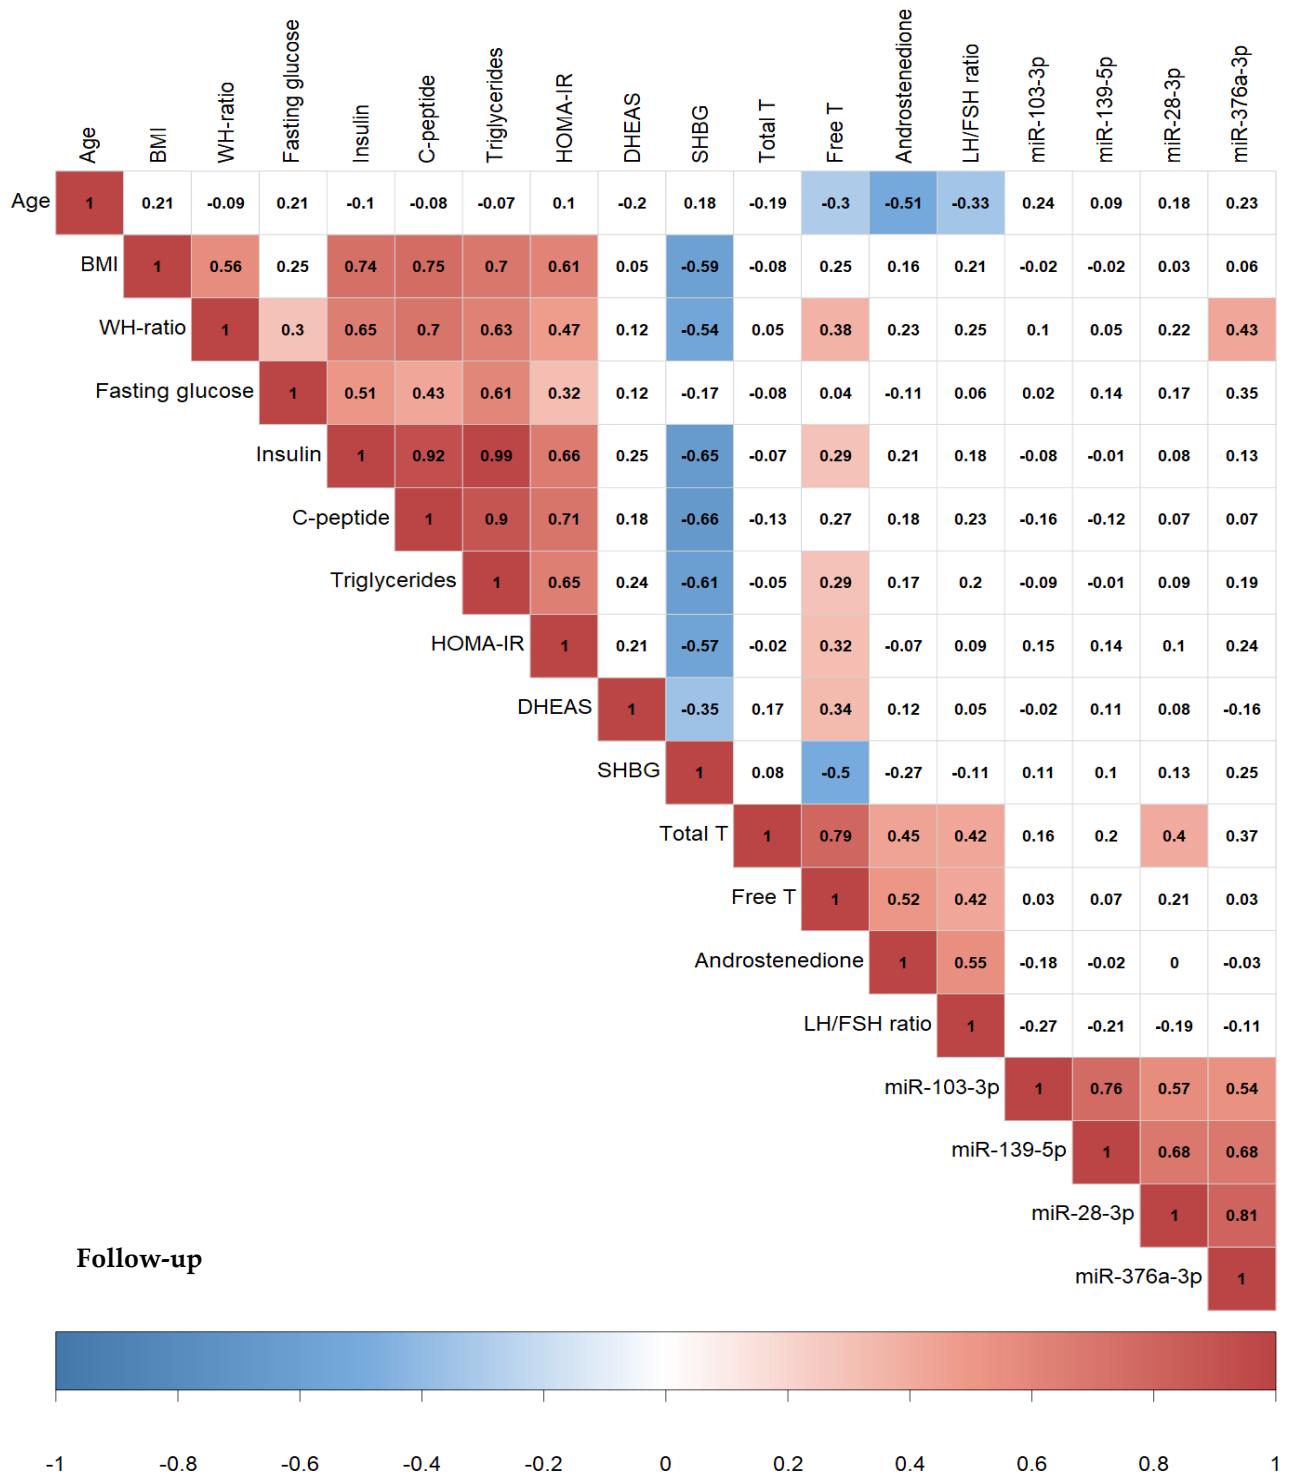

Supplementary Figure S1: ROC curve of free T

Supplementary Figure S1: ROC curve of free T in which age and BMI at BL was included in the logistic regression model. n = 53, sensitivity = 63% while specificity = 89%.

Supplementary Figure S2: Correlations between clinical and biochemical variables and miRNAs for women with PCOS, at BL or FU.

Supplementary Figure S2: Correlations between clinical and biochemical variables and the selected miRNAs, at either BL or FU, measured in women with PCOS. Colors represent significant ($p \leq 0.05$) correlations by Spearman rho with color intensity ranging from -1 to +1.
