

Supplementary Figure S3. Real-time reverse transcription polymerase chain reaction (RT-PCR) verification of the RNA-Seq results.

Data for comparison in IS24 vs. IR24 are shown. Two reference genes *Gapdh* and *Rpl3* were used to normalize PCR-results. Eight genes, whose *P*-value lower 0.05, as well as two other genes were selected for analysis. The data are presented as the mean \pm standard error of the mean.
