

**Figure S1.** Colony colours of isolates on CRA. (A) Black colonies indicative of strong biofilm formation, (B) brown colonies indicative of moderate biofilm formation, and (C) red colonies indicating no biofilm formation.

**Table S1.** CoNS species distribution and antibiotic resistance profile of CoNS isolates.

| Isolate ID | CoNS species                         | Ward type            | OD <sub>570nm</sub> |     |   |     |     |     |     |   |    |    |   |    |    |     |     |     |    |    |     |

Abbreviations: FOX, cefoxitin; P, penicillin G; CPT, ceftaroline; CIP, ciprofloxacin; MXF, moxifloxacin; AZM, azithromycin; E, erythromycin; CN, gentamicin; AK, amikacin; C, chloramphenicol; TE, tetracycline; DO, doxycycline; TEC, teicoplanin; TGC, tigecycline; LZD, linezolid; DA, clindamycin; RD, rifampicin; SXT, sulphamethoxazole(trimethoprim); F, nitrofurantoin; R, resistant; OPD, Outpatient Department; ICU, Intensive Care Unit; CRA, Congo Red agar

Black colonies were considered positive for biofilm formation on CRA, brown colonies; pink/red colonies were negative for biofilm formation on CRA while brown colonies on CRA were considered moderate biofilm formers

**Table S2.** CRA characteristics and classification of biofilm-forming capacities of CoNS isolates using different formulas.

| Isolates ID | CoNS species                            | CRA charact<br>eristics | OD≤O                 | ODc<OD≤(2×OD | (2×ODc)<OD≤(4×     | (4×ODc)<OD | BF = AB-CW |      |          |        | BF=AB/CW |      |              |        |
