

Figure S1. Schematic diagram of sesquiterpenoid biosynthesis pathway activated in *A. sinensis* responding to mechanical wounding. Each row represents each DEG, and each column represents the expression level from different samples. The color from blue to red represents gene expression from low to high.

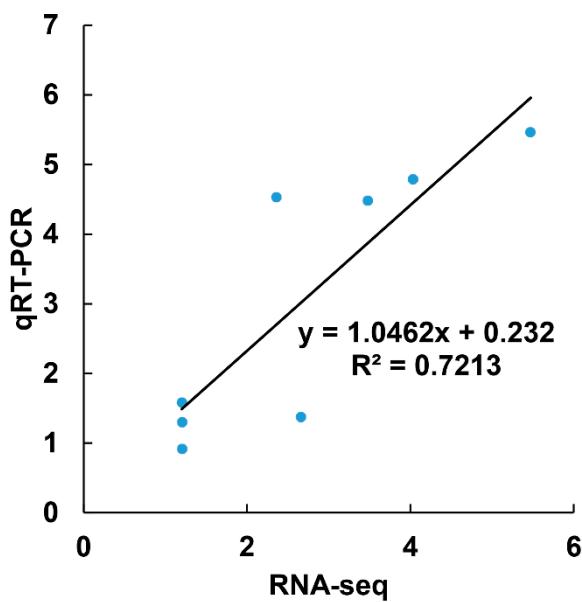

Figure S2. The comparison of the expression levels of eight genes between RNA-seq and qRT-PCR. The x-axis and y-axis represent the $\log_2(\text{fold change})$ values by RNA-seq and qRT-PCR for each gene, respectively.

Table S1. Primer pairs of selected genes for qRT-PCR validation.
