

Supplementary Materials A

Figure S1. Dose concentration distribution over time for meteorological conditions in Urumqi, Xinjiang.

Figure S2. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure.

Figure S3. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days.

Figure S4. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits.

Figure S5. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure after adjusted for other air pollution.

Figure S6. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days after adjusted for NO₂ exposure.

Figure S7. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for NO₂ exposure.

Figure S8. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days after adjusted for PM₁₀ exposure.

Figure S9. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for PM₁₀ exposure.

Figure S10. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days after adjusted for CO exposure.

Figure S11. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for CO exposure.

Figure S12. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days after adjusted for SO₂ exposure.

Figure S13. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for SO₂ exposure.

Figure S14. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye

disease outpatient visits at various lag days after adjusted for O₃ exposure.

Figure S15. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for O₃ exposure.

Figure S16. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days after adjusted for others exposure.

Figure S17. 3D graph and contour map of PM_{2.5} exposure on dry eye disease outpatient visits after adjusted for others exposure.

Figure S18. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in male patients.

Figure S19. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in male patients.

Figure S20. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in female patients.

Figure S21. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in female patients.

Figure S22. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in age 0-5 patients.

Figure S23. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in age 0-5 patients.

Figure S24. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in age 6-18 patients.

Figure S25. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in age 6-18 patients.

Figure S26. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in age 19-64 patients.

Figure S27. The relative risks (RRs) of per 10 µg/m³ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in age 19-64 patients.

Figure S28. Exposure-response association between dry eye disease outpatient visits

and PM_{2.5} exposure in age ≥ 65 patients.

Figure S29. The relative risks (RRs) of per 10 $\mu\text{g}/\text{m}^3$ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in age ≥ 65 patients.

Figure S30. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in the warm season.

Figure S31. The relative risks (RRs) of per 10 $\mu\text{g}/\text{m}^3$ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in the warm season.

Figure S32. Exposure-response association between dry eye disease outpatient visits and PM_{2.5} exposure in the cold season.

Figure S33. The relative risks (RRs) of per 10 $\mu\text{g}/\text{m}^3$ increase in PM_{2.5} on dry eye disease outpatient visits at various lag days in the cold season.

Figure S34. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure.

Figure S35. The relative risks (RRs) of per 10 $\mu\text{g}/\text{m}^3$ increase in PM₁₀ on dry eye disease outpatient visits at various lag days.

Figure S36. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits.

Figure S37. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure after adjusting for other air pollution.

Figure S38. The relative risks (RRs) per 10 $\mu\text{g}/\text{m}^3$ increase in PM₁₀ on dry eye disease outpatient visits at various lag days after adjusted for NO₂ exposure.

Figure S39. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusting for NO₂ exposure.

Figure S40. The relative risks (RRs) per 10 $\mu\text{g}/\text{m}^3$ increase in PM₁₀ on dry eye disease outpatient visits at various lag days after adjusted for PM_{2.5} exposure.

Figure S41. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusted for PM_{2.5} exposure.

Figure S42. The relative risks (RRs) of per 10 $\mu\text{g}/\text{m}^3$ increase in PM₁₀ on dry eye disease

outpatient visits at various lag days after adjusted for SO₂ exposure.

Figure S43. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusted for SO₂ exposure.

Figure S44. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days after adjusted for CO exposure.

Figure S45. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusted for CO exposure.

Figure S46. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days after adjusted for O₃ exposure.

Figure S47. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusted for O₃ exposure.

Figure S48. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days after adjusted for others exposure.

Figure S49. 3D graph and contour map of PM₁₀ exposure on dry eye disease outpatient visits after adjusted for others exposure.

Figure S50. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in male patients.

Figure S51. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in male patients.

Figure S52. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in female patients.

Figure S53. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in female patients.

Figure S54. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in age 0-5 patients.

Figure S55. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in age 0-5 patients.

Figure S56. Exposure-response association between dry eye disease outpatient visits

and PM₁₀ exposure in age 19-64 patients.

Figure S57. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in age 19-64 patients.

Figure S58. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in age ≥65 patients.

Figure S59. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in age ≥65 patients.

Figure S60. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in the warm season.

Figure S61. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in the warm season.

Figure S62. Exposure-response association between dry eye disease outpatient visits and PM₁₀ exposure in the cold season.

Figure S63. The relative risks (RRs) of per 10 µg/m³ increase in PM₁₀ on dry eye disease outpatient visits at various lag days in the cold season.

Figure S64. Exposure-response association between dry eye disease outpatient visits and CO exposure.

Figure S65. The relative risks (RRs) of per 10 mg/m³ increase in CO on dry eye disease outpatient visits at various lag days.

Figure S66. 3D graph and contour map of CO exposure on dry eye disease outpatient visits.
