**Table S1.** The geographic location of municipalities in the eastern region of Michoacán-Mexico

| Municipality name | Acronym | Geographical coordinates      | M.A.S.L. |
|-------------------|---------|-------------------------------|----------|
| Zinapécuaro       | ZIN     | 19° 52' 15" N; 100° 50' 06" W | 2,463    |
| Ciudad Hidalgo    | HID     | 19° 41' 32" N; 100° 33' 26" W | 2,060    |
| San Pedro Jácuaro | SPJ     | 19° 42' 52" N; 100° 38' 41" W | 2,160    |
| Maravatío         | MAR     | 19° 53' 36" N; 100° 26' 34" W | 2,020    |
| Irimbo            | IRI     | 19° 42' 00" N; 100° 28' 42" W | 2,150    |
| Zitácuaro         | ZIT     | 19° 26' 17" N; 100° 21' 32" W | 1,942    |
| Tuxpan            | TUX     | 19° 34' 00" N; 100° 27' 46" W | 1,726    |

**Table S2.** Water quality parameters, methods and equipment used in laboratory determination [18]

| Parameter  | Analytical Method  | Equipment   |
|--|--|---|
| Turbidity  | 2130B. Nephelometric   | HACH Turbidimeter 2100 ANIS   |
| Color  | 2120C. Spectrophotometric  | HACH Spectrophotometer DR 2800  |
| Acidity  | 2310B. Titration   | NA <sup>d</sup>   |
| Alkalinity   | 2310B. Titration   | NA <sup>d</sup>   |
| Hardness   | 2340B. Calculated by Ca <sup>+2</sup> and Mg <sup>+2</sup>                           | NA <sup>d</sup>   |
| COD <sup>a</sup>   | 5220D. Closed-reflux Colorimetric  | HACH Digester DR 8200   |
| BOD <sup>b</sup>   | 5210D. Respirometric   | BOD analyzer Trak (HACH) with incubator   |
| Cations/Anions:  |  |   |
| Li <sup>+</sup> , Na <sup>+</sup> , NH <sub>4</sub> <sup>+</sup> , K <sup>+</sup> , Ca <sup>+2</sup> , Mg <sup>+2</sup> , F <sup>-</sup> , Cl <sup>-</sup> , NO <sub>2</sub> <sup>-</sup> , Br <sup>-</sup> , NO <sub>3</sub> <sup>-</sup> , PO <sub>4</sub> <sup>3-</sup> , SO <sub>4</sub> <sup>2-</sup> | 4110 B. (anions)/ASTM D 6919-03 (cations). Chromatographic: external standard method | Ion chromatograph, Metrohm 861. Advanced Compact Model with a conductivity detector |
| Metals and toxic elements: Ba, Cr, Fe, Cu, Zn, Cd, Al, Pb, As, Sb, Mn, Co, Ni, Se  | 3125B. ICP-MS <sup>c</sup>   | Perkin Elmer ELAN 9000 ICP-MS <sup>c</sup>  |

<sup>a</sup> COD: Chemical Oxygen Demand; <sup>b</sup> BOD: Biochemical Oxygen Demand; <sup>c</sup> ICP-MS: Inductively Coupled Plasma-Mass Spectrometry; <sup>d</sup> NA: No Applicable

**Table S3. Negative effects on human health of parameters employed in the WQI.**

| Parameter                | Effects on human health  |
|--------------------------|--|
| pH <sup>1</sup>          | Below pH 4.0, induce redness and irritation of the eyes. Below pH 2.5, damage in epithelium is irreversible and extensive. Furthermore, pH can affect the degree of corrosion of metals as well as disinfection efficiency; it may have an indirect effect on health.  |
| EC <sup>2</sup>          | Electric conductivity have a relation with Total Dissolved Solids (TDS) or inorganic salts present in water. High levels of TDS may be objectionable to consumers owing to the resulting taste and to excessive scaling in water pipes, heaters, boilers, and household appliances. TDS in low concentrations could be unacceptable to consumers because of its flat, insipid taste; it is also often corrosive to water-supply systems.                       |
| Temperature <sup>3</sup> | Cool water is generally more palatable than warm water, and temperature will impact the acceptability of a number of other inorganic constituents and chemical contaminants that may affect taste. High water temperature enhances the growth of microorganisms and may increase taste, odour, colour and corrosion problems (indirect effect on human health).  |
| Sodium <sup>4</sup>      | Acute effects may include nausea, vomiting, convulsions, muscular twitching and rigidity, and cerebral and pulmonary oedema. Aggravates chronic congestive heart failure, and ill effects due to high levels of sodium in drinking water. In infants induce severe gastrointestinal infections from fluid loss, leading to dehydration and raised sodium levels in the plasma (hypernatraemia); permanent neurological damage is common under such conditions. |
| Calcium <sup>5,6</sup>   | High calcium levels contribute to hard water. Hard water cold provide an important supplementary contribution to total calcium intake. Inadequate intakes of calcium have been associated with increased risks of osteoporosis, nephrolithiasis (kidney stones), colorectal cancer, hypertension, etc.   |
| Magnesium <sup>5,6</sup> | High magnesium levels contribute to hard water. Hard water cold provide an important supplementary contribution to total magnesium intake. Magnesium in high concentration (250 mg/L) can have a laxative effect.  |

|                               |  |
|-------------------------------|--|
|                               | Low magnesium levels are associated with endothelial dysfunction, increased vascular reactions, decreased insulin sensitivity, hypertension, coronary heart disease, type 2 diabetes mellitus and metabolic syndrome.  |
| <b>Chloride<sup>7</sup></b>   | Chloride toxicity has not been observed in humans except in the special case of impaired sodium chloride metabolism, e.g. in congestive heart failure. Little is known about the effect of prolonged intake of large amounts of chloride in the diet. Hypertension associated with sodium chloride intake appears to be related to the sodium rather than the chloride ion.  |
| <b>Nitrate<sup>8</sup></b>    | The exposure risk to nitrate is by their reduction in nitrite. Nitrate could induce methaemoglobinemia, carcinogenicity, congenital malformations in some cases, cardiovascular effects, and effect on thyroid function and goiter incidence.  |
| <b>Sulfate<sup>9</sup></b>    | Cathartic effects in people consuming drinking water containing sulfate, dehydration are a common side-effect following the ingestion of large amounts of magnesium or sodium sulfate. Children, transients and the elderly are sensitive populations because of the potentially high risk of dehydration from diarrhea by high levels of sulfate in drinking water.   |
| <b>Chromium<sup>10</sup></b>  | Acute tubular necrosis, <u>asthma</u> —allergen, sensitizer, bronchitis—acute, contact dermatitis—irritant, lung <u>cancer</u> , nasal polyps, nasal septal perforation, pneumonitis (hypersensitivity), rhinitis—allergic, skin ulceration, brain <u>cancer</u> —adult, chronic renal disease, etc.   |
| <b>Lead<sup>10</sup></b>      | <u>Abnormal sperm (morphology, motility, and sperm count)</u> , acute tubular necrosis, hyperactivity, anemia (including hemolytic), behavioral problems, cataracts, chronic renal disease, <u>cognitive impairment (includes impaired learning, impaired memory, and decreased attention span/mental retardation/developmental delay)</u> , etc.  |
| <b>Arsenic<sup>10</sup></b>   | <u>Angiosarcoma</u> (hepatic), arrhythmias, bladder <u>cancer</u> , contact dermatitis—irritant, <u>diabetes—Type II</u> , hearing loss, hyperkeratosis/hyperpigmentation, lung <u>cancer</u> , peripheral neuropathy, skin <u>cancer</u> (non-melanoma), skin ulceration, adult-onset <u>leukemias</u> , anemia (including hemolytic), aplastic anemia. Bronchitis—chronic, <u>cardiomyopathy</u> , cirrhosis, <u>congenital malformations—general</u> , <u>coronary artery disease (peripheral vascular disease, atherosclerosis)</u> , <u>fetotoxicity (miscarriage/spontaneous abortion, stillbirth)</u> , hepatocellular <u>cancer</u> (liver cancer), etc. |
| <b>Manganese<sup>11</sup></b> | The progressive increases in the manganese concentration in drinking water are associated with a progressively higher prevalence of neurological signs of chronic manganese poisoning and higher manganese concentrations in the hair of older persons.  |

Cond: Conductivity; Temp: Temperature; TDS: Total Dissolved Solids; DO: Dissolved Oxygen; Turb: Turbidity; Acid: Acidity; Alkal: Alkalinity; COD: Chemical Oxygen Demand. Bold values indicate p<0.05

**Figure S1.** Quality parameters of drinking water supply sources for humans in the regions of study and the permissible limits defined by WHO, NOM-040 and NOM-127. Green dots (●): rainy season; yellow dots (○): dry season. Vertical lines on the secondary x-axis represent the distribution of each municipality.
