Abbreviations are as follows: temperature (Temp), conductivity (Cond), dissolved oxygen (DO), transparency (Transp), five-day biochemical oxygen demand ( $BOD_5$ ), total suspended solids (TSS), and National Sanitation Foundations water quality index (NSF WQI).

**Table S2.** Table of pairwise Permutational Multivariate Analysis Of Variance (PERMANOVA) tests. For interaction terms (Lake sections × season) pairwise tests are organized by levels of the corresponding factor as follows: (D) – Within level 'Dry' of factor Season, (R) – Within level 'Rainy' of factor Season, (W) – Within level 'Wetland' of factor Lake sections, (N) – Within level 'North' of factor Lake sections, (C) – Within level 'Center' of factor Lake sections, (S) –Within level 'South' of factor Lake sections. Bold values indicate significant results ( $p \leq 0.05$ ) after applying Benjamini-Hochberg correction to  $\alpha$ .

Term Lake section						
Groups	t	p perm	Unique perms	p (MC)	α corr
