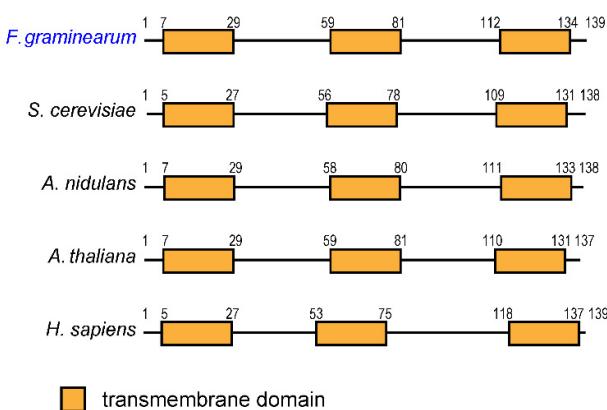

Figure S1. Amino-acid sequence and domain alignment of Erv14. (A) Identical segments are indicated by a black background. The compared sequences were from *F. graminearum*, *F. oxysporum*, *M. oryzae*, *N. crassa*, *A. nidulans*, *S. cerevisiae*, and *S. pombe*. (B) Conserved domains of Erv14 proteins are found in *F. graminearum*, *S. cerevisiae*, *A. nidulans*, *A. thaliana* and *H. sapiens*.

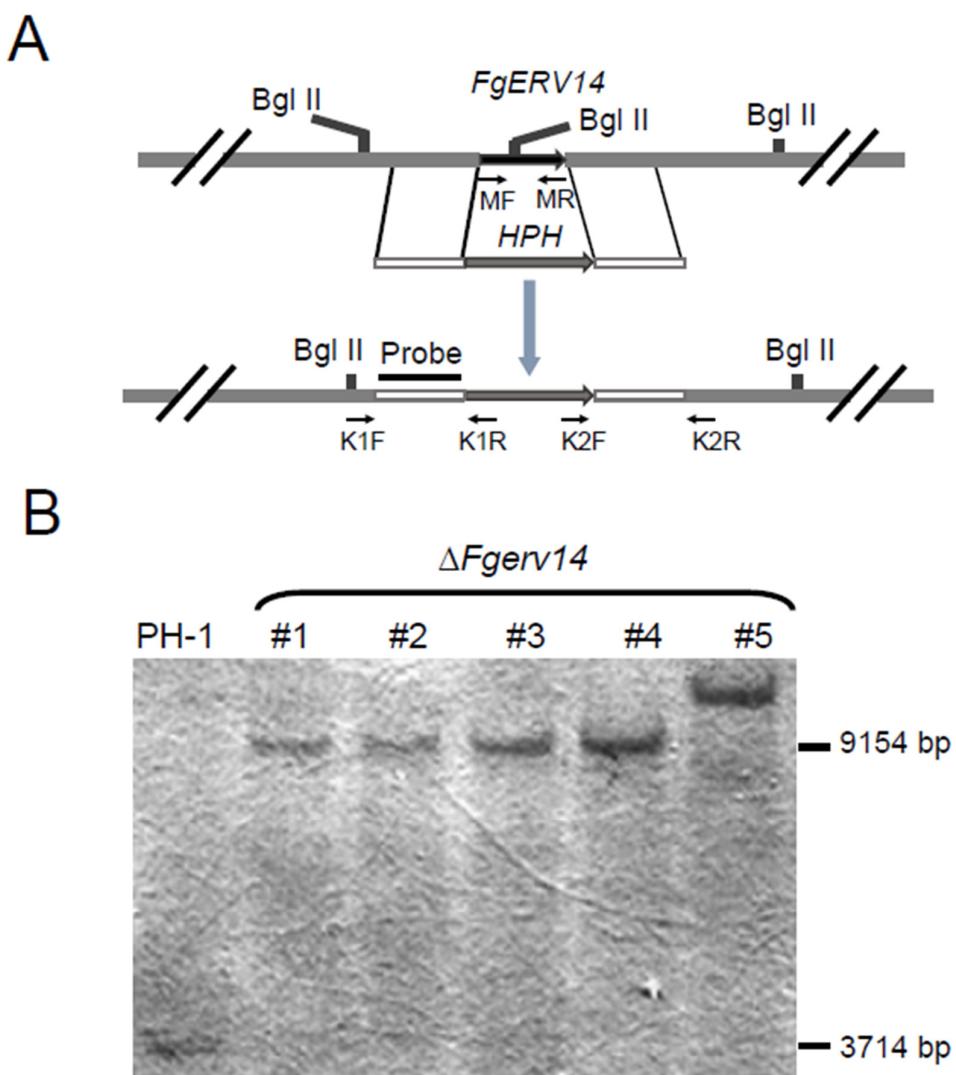

Figure S2. Generation and verification of *FgERV14*-deletion mutants. (A) Strategy for achieving *FgERV14* deletion in *F. graminearum*. The *FgERV14* gene was replaced by a cassette containing a *HPH* gene. (B) Southern blot analysis of WT PH-1 and $\Delta Fgerv14$ mutants (#1–5). Genomic DNA was digested with *Bgl*II.
