Atypically dividing cells	5.591	5, 12	0.007	0.700

Data were checked for homogeneity of variation and sphericity. As our data violated the assumption of sphericity, a repeated measures ANOVA with a Greenhouse-Geisser correction was used.

F, Fisher F-test; df, degree of freedom.

Statistical significance at P < 0.05 is highlighted by pink color.

Table S2. Two-way ANOVA: Test of pairwise differences (factor: phenol treatment) for cell count, spherical shape cells, hypertrophied cells, monster cells, lipofuscin bodies and atypically dividing cells of *Euglena gracilis*.
