

Supplementary Material

Table S1. The TRIPOD checklist

Section/topic	Item	Development or validation?	Checklist item	Explanation
Title and abstract				
Title	1	D;V	Identify the study as developing and/or validating a multivariable prediction model, the target population, and the outcome to be predicted	Described in Title
Abstract	2	D;V	Provide a summary of objectives, study design, setting, participants, sample size, predictors, outcome, statistical analysis, results, and conclusions	Presented in Abstract
Introduction				
Background and objectives	3a	D;V	Explain the medical context (including whether diagnostic or prognostic) and rationale for developing or validating the multivariable prediction model, including references to existing models	Presented in Introduction
	3b	D;V	Specify the objectives, including whether the study describes the development or validation of the model, or both	Develop a classification model.
Methods				
Source of data	4a	D;V	Describe the study design or source of data (for example, randomised trial, cohort, or registry data), separately for the development and validation data sets, if applicable	This is a retrospective study. Details in the section of study participants
	4b	D;V	Specify the key study dates, including start of accrual; end of accrual; and, if applicable, end of follow-up	May 2016 to May 2022
Participants	5a	D;V	Specify key elements of the study setting (for example, primary care, secondary care, general population) including number and location of centres	This is a single-center study
	5b	D;V	Describe eligibility criteria for participants	Details in the section of study participants
	5c	D;V	Give details of treatments received, if relevant	Patients who received treatment were excluded.

Outcome	6a	D;V	Clearly define the outcome that is predicted by the prediction model, including how and when assessed	This is a classification model.
	6b	D;V	Report any actions to blind assessment of the outcome to be predicted	Predict the type of pathology which is blind to images.
Predictors	7a	D;V	Clearly define all predictors used in developing the multivariable prediction model, including how and when they were measured	All the information is presented in the segmentation of images, Feature extraction.
	7b	D;V	Report any actions to blind assessment of predictors for the outcome and other predictors	The VOI blinded to the classification result
Sample size	8	D;V	Explain how the study size was arrived at.	All patients who met the inclusion criteria were included
Missing data	9	D;V	Describe how missing data were handled (for example, complete-case analysis, single imputation, multiple imputation) with details of any imputation method	None of the data was missing
Statistical analysis methods	10a	D	Describe how predictors were handled in the analyses	Described in pre-process of datasets and dimensionality reduction
	10b	D	Specify type of model, all model-building procedures (including any predictor selection), and method for internal validation	Described in fitting the model and internal cross-validation
	10c	V	For validation, describe how the predictions were calculated	As described in the External test
	10d	D;V	Specify all measures used to assess model performance and, if relevant, to compare multiple models	The weighted average F1 score and AUC of ROC
	10e	V	Describe any model updating (for example, recalibration) arising from the validation, if done	NOT APPLICABLE
Risk groups	11	D;V	Provide details on how risk groups were created, if done	NOT INCLUDED
Development v validation	12	V	For validation, identify any differences from the development data in setting, eligibility criteria, outcome, and predictors	
Results				
Participants	13a	D;V	Describe the flow of participants through the study, including the number of participants with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful	Presented in Figure 1 and Table 1.

	13b	D;V	Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome	Presented in the study participants and Table 1.
	13c	V	For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome).	
Model development	14a	D	Specify the number of participants and outcome events in each analysis	Presented in Table 2
	14b	D	If done, report the unadjusted association between each candidate predictor and outcome	This has not been performed.
Model specification	15a	D	Present the full prediction model to allow predictions for individuals (that is, all regression coefficients, and model intercept or baseline survival at a given time point)	The features and hyperparameters used to create the model are presented in the results section.
	15b	D	Explain how to use the prediction model	
Model performance	16	D;V	Report performance measures (with CIs) for the prediction model	The ROC and the F1 score
Model updating	17	V	If done, report the results from any model updating (that is, model specification, model performance)	
Discussion				
Limitations	18	D;V	Discuss any limitations of the study (such as nonrepresentative sample, few events per predictor, missing data)	The limitation is illustrated in the discussion section.
Interpretation	19a	V	For validation, discuss the results with reference to performance in the development data, and any other validation data	Validated by data without resampling.
	19b	D;V	Give an overall interpretation of the results, considering objectives, limitations, results from similar studies, and other relevant evidence	In discussion section
Implications	20	D;V	Discuss the potential clinical use of the model and implications for future research	
Other information				
Supplementary information	21	D;V	Provide information about the availability of supplementary resources, such as study protocol, Web calculator, and data sets	Table S2 provides all the features used in the study (Table S2).

Funding	22	D;V	Give the source of funding and the role of the funders for the present study	In Declaration.
---------	----	-----	--	-----------------

*Items relevant only to the development of a prediction model are denoted by D,
items relating solely to a validation of a prediction model are denoted by V, and
items relating to both are denoted D;V.

The SUVmax of brain metastases with different pathological type

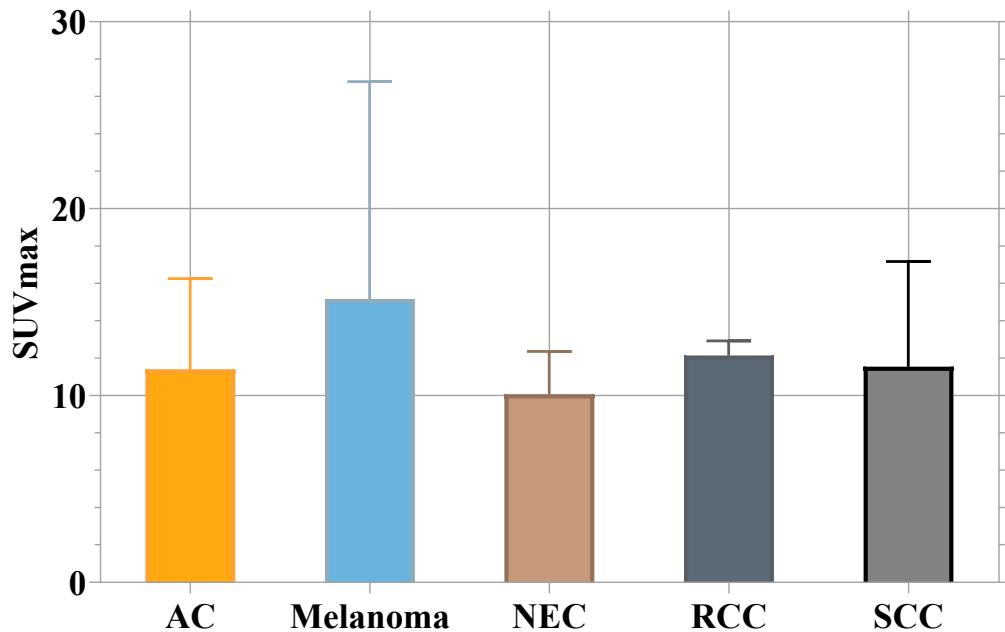

Figure S1. The SUVmax of brain metastases with different pathology.

Figure S1 The average SUVmax values of the lesions with different pathological types. The ANOVA testing found no difference in the average SUVmax among different pathological types ($P=0.5213$). The average SUVmax of adenocarcinoma, melanoma, neuroendocrine carcinoma, Renal clear cell cancer, and squamous carcinoma was 11.4 ± 4.85 , 15.17 ± 11.63 , 10.07 ± 2.282 , 12.14 ± 0.7797 , and 11.54 ± 5.632 , respectively.

AC: Adenocarcinoma, NEC: Neuroendocrine carcinoma, SCC: Squamous carcinoma, and RCC: Renal clear cell cancer.
