

Supplementary material. Survey Questionnaire Example

Q5. The assessment of the main effects of processes digitalization and the creation of a paperless environment (common data environment)?

	Strongly disagree	Disagree	Neither agree or disagree	Agree	Strongly agree
1. Acceleration of delivery and acceptance of the works performed					
2. Acceleration of interdepartmental interaction and interaction of ICP participants					
3. Closer integration of federal and regional information systems					
4. Increased transparency and consistency of information about the CCP and investment projects					
5. Increased quality of construction products (by minimizing collisions and errors, optimizing design solutions, minimum corrections in the project)					
6. Decreased construction duration (schedule optimization, plan/actual compliance, getting approvals faster)					
7. Minimization of investment risks (accurate costing, calculation of resources, control in electronic form, reduction of unexpected costs)					
8. Reduced time and costs for project administration, consulting and support					
9. Creation of an interdepartmental legally significant electronic document management with the use of an electronic signature					
10. Operational monitoring and control of the implementation of investment projects and programs, the disbursement of financial funds, including budgetary ones					

Q7. What is the average calculated value of Lean digitalization effects?

	5%	10%	15%	20%	30%	40%	50%
Reduction of losses due to the fact							
1. that the actual cost exceeds the estimated cost							
2. Reduction of losses from exceeding the estimated construction period							
3. Reduction of operational losses due to reduction in quality of works and elements							
4. Reduction of time and operational losses from disruption of resource supplies and increase in the duration of operations							
5. Reduction of time and operational losses from RFI clarifications							
6. Reduction of time inter-operational and operational losses from collisions and design changes
