^T – Type Strain

Table S2. Comparison of the potato tissue maceration ability of the 27 strains isolated from asymptomatic plant samples in contrast to 17 strains originating from plants with disease symptoms. Strains abbreviations: * - strains isolated from symptomatic plants, ^T - type strains. Means \pm SD of diameters of the rotten tissues is depicted. Three independent experiments with nine technical replications were conducted. Means marked with a different letter (a, b, c, ... p) are significantly different according to the Games-Howell test followed by a post-hoc analysis applying Welch and Brown-Forsythe corrections for nonhomogeneous variances criterion at $p < 0.02$.
