**Figure S8. Distribution of *PfSAMS* interactors with enzymatic functions according to the log<sub>2</sub> ratio.** The 1,114 identified interaction partners with enzymatic function were plotted based on the peptide count and the log<sub>2</sub> ratio. (A) Bar chart showing the classes of enzymes identified in the groups of *PfSAMS* interactors per absolute count. Class names were obtained by text mining of *PfSAMS* interactors' fasta headers acquired from mass spectrometry analysis. (E) Box plot showing the classes of enzymes as identified in (D), based on the log<sub>2</sub> ratio. The line inside each boxplot shows the median of each class.
