

Figure S1. Daily average temperature and relative humidity in greenhouse from June 26 to September 26.

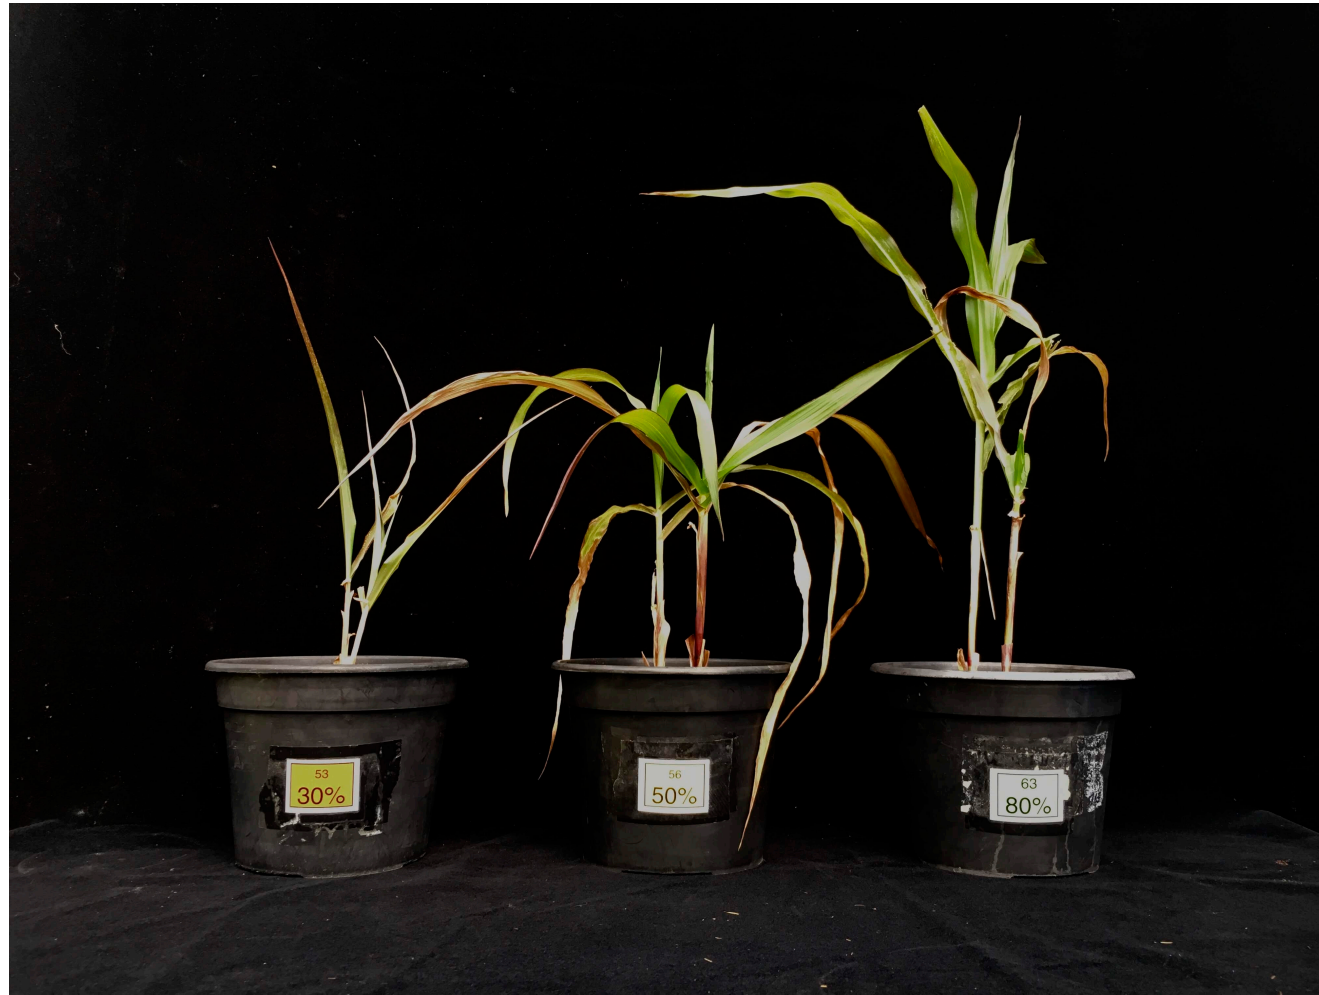

Figure S2. Mesocosm experiment using a pool of arbuscular mycorrhizal fungi under varying drought levels. On the left side, the pot with 30 % of the water-holding capacity (WHC) simulates severe drought, in the middle (50 % of the WHC) pot simulates moderate drought, and on the right side the control treatment under no drought (80 % of the WHC).
