

SUPPLEMENTARY MATERIAL

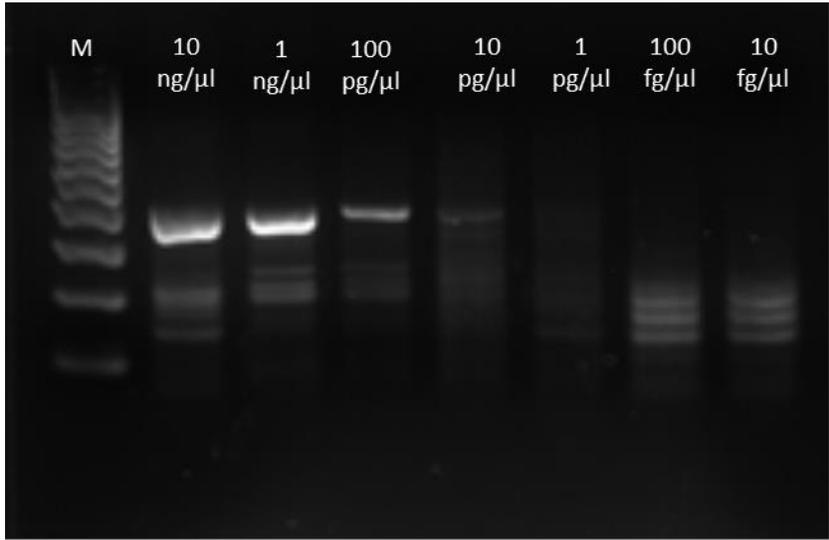

Figure S1: Sensitivity analysis of *B. cenocepacia* J2315 by PMAxx-RPA exo assay with agarose gel electrophoresis. DNA samples (94.3 ng/μl) were spectrophotometrically determined at A260 and using 10-fold serial diluted genomic DNA (approx. 10 ng/μL, 1 ng/μL, 100 pg/μL, 10 pg/μL, 1 pg/μL, and 100 fg/μL) of *B. cenocepacia* J2315.

Table S1. Sequence information of the cluster 3558
