MSSA, methicillin-susceptible *S. aureus*; PSSA, penicillin-susceptible *S. aureus*; PRSA, penicillin-resistant *S. aureus*; MRSA, methicillin-resistant *S. aureus*; HA-MRSA, healthcare-associated *S. aureus*; CA-MRSA, community acquired *S. aureus*; PVL-pos, Panton Valentine leucocidin positive; LA-MRSA, livestock associated *S. aureus*; n.d., not detected.

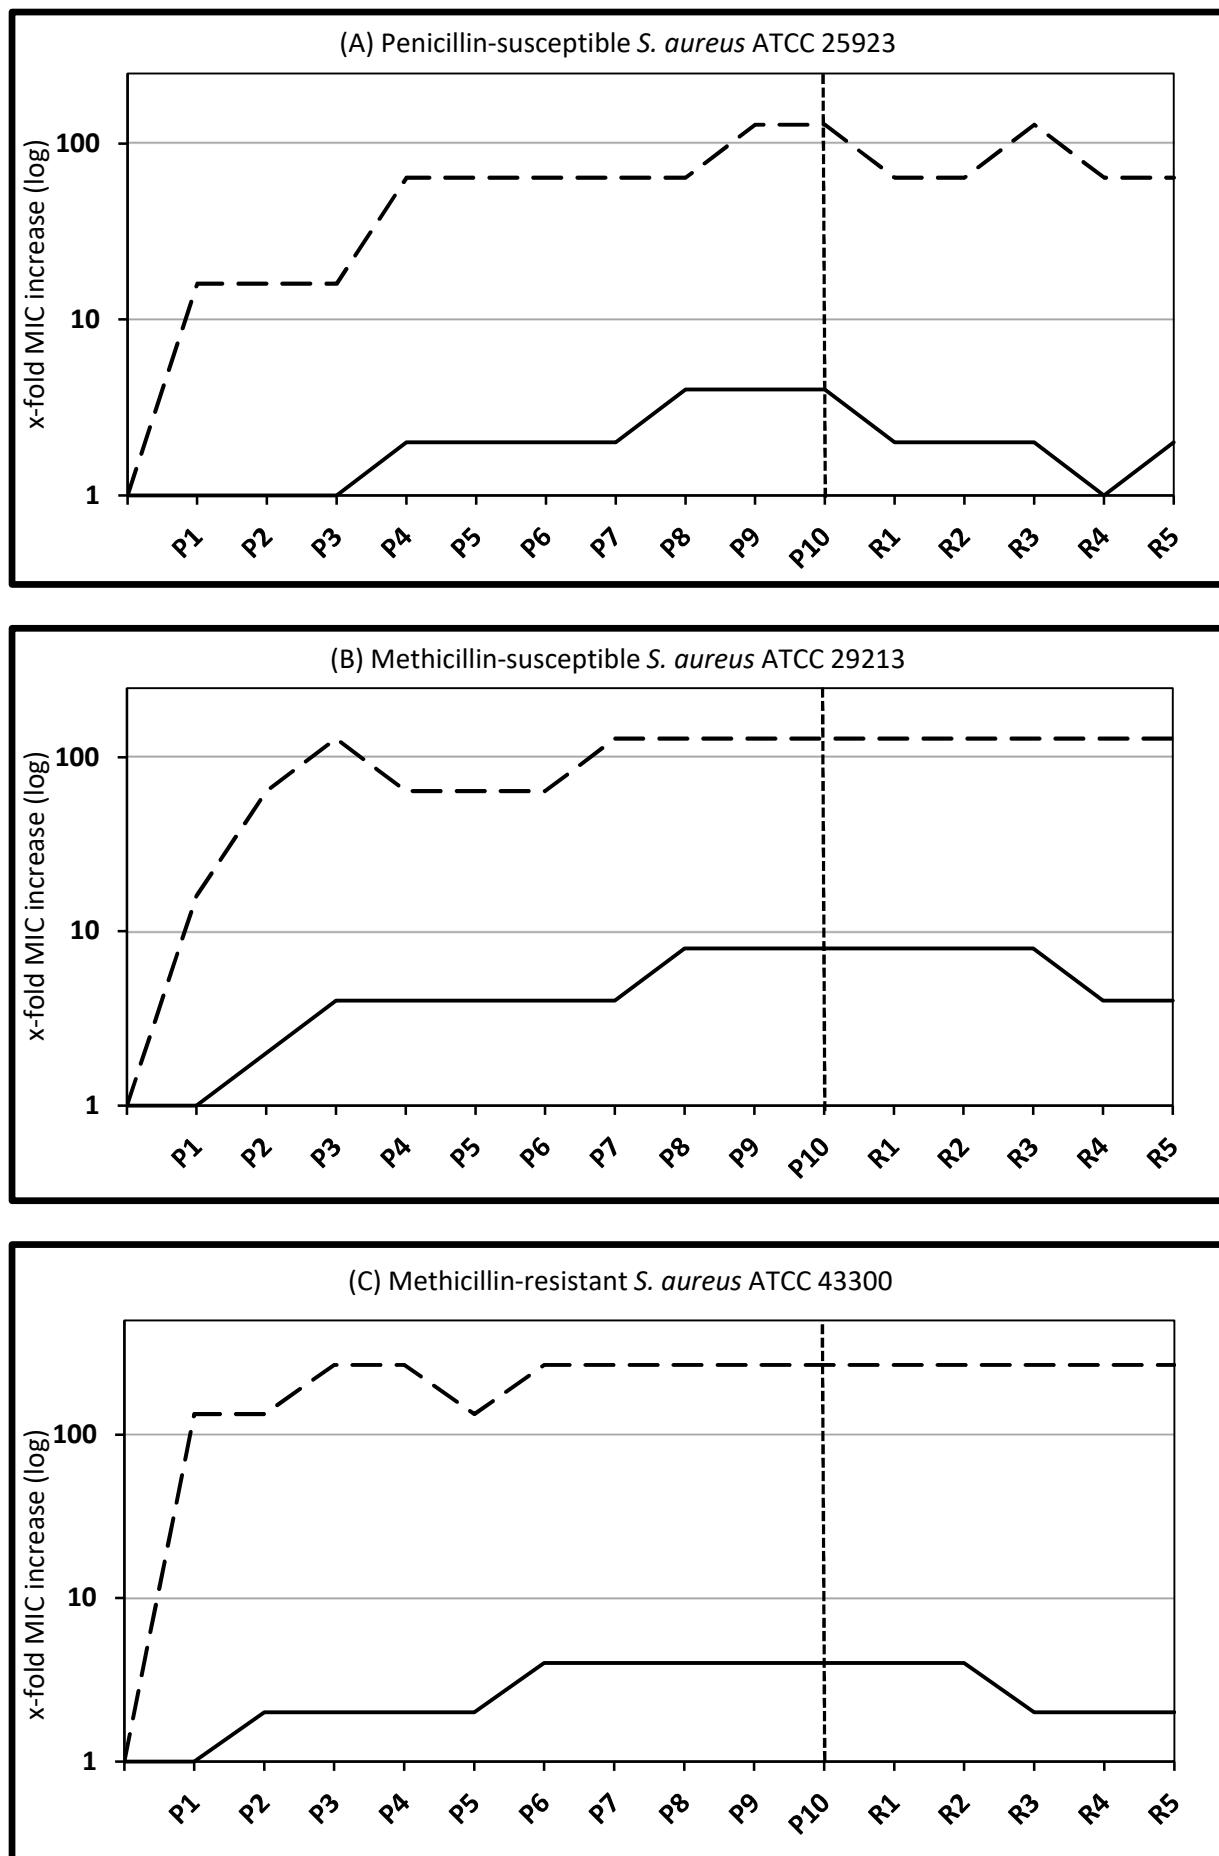

Figure S1. Data from the penicillin-susceptible (**A**), methicillin-susceptible (**B**) and methicillin-resistant (**C**) reference strains exposed to ten passages of sodium bituminosulfonate (solid line) and fusidic acid (dashed line) on linear gradient plates. The dotted vertical line indicates the endpoint after ten passages on linear gradient plates containing the active agents (labeled with P) and five recovery passages on plain agar plates (labeled with R).

Figure S2. Pairwise alignment of obtained polymorphisms within the *fusA* gene from the screening for resistance mechanism.
