

Supplementary Dataset 2. Comparison of sequence coverage of predicted cell wall proteins that were identified in this study with that previously published for “surfomic” analysis (Prados de la Torre et al, Vaccines 2020, 8(2):188. doi: 10.3390/vaccines8020188). For such a comparison, peptides found in both proteomics datasets were mapped on the sequences of cell wall proteins. For each protein sequence, those highlighted in yellow represent the peptides found in the exoproteomes; those represented in green, the peptides found in the “surfomes”.
