

Figure S1. Response curve of mean 24-hr (left) and nighttime (right) activity, as measured in ODBA value, of male (blue) and female (pink) wildcats to minimum daily temperature (shaded areas show the 95% confidence intervals).

Figure S2. Response curve of mean 24-hr (left) and nighttime (right) activity, as measured in ODBA value, of male (blue) and female (pink) wildcats to day length (i.e. proportion of day with sunlight) (shaded areas show the 95% confidence intervals).

Figure S3. Response curve of mean 24-hr (left) and nighttime (right) activity, as measured in ODBA value, of male (blue) and female (pink) wildcats to the phase of the moon (0 no moon – 1 full moon) (shaded areas show the 95% confidence intervals).
