

Supplementary Materials: Enhanced Iron and Selenium Uptake in Plants by Volatile Emissions of *Bacillus amyloliquefaciens* (BF06)

Jianfei Wang, Cheng Zhou, Xin Xiao, Yue Xie, Lin Zhu and Zhongyou Ma

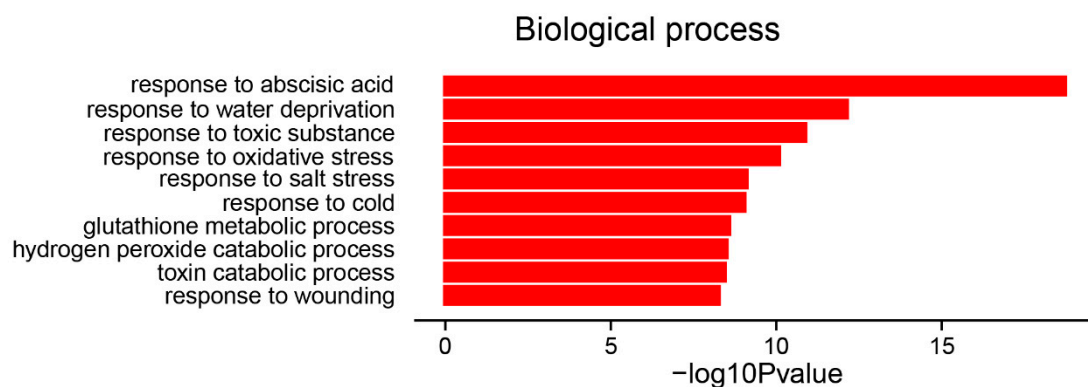

Figure S1: List of the top ten 10 significant GO terms in biological process (BP) domain for down-regulated differentially expressed genes (DEGs) in the VOCs-exposed plants based on GO classifications. The p value indicates a significant difference of the comparison between the control and VOCs-exposed plants.
