

Table S1. Studies with data from case reports and case series on COVID-19 associated CNS manifestation.

Author/ country	Age /gen- der	Onset COVID -19 to Neurolo- gical symp- tom onset	Co- morbid- ity	Neurological presentation	Se- rum/CSF				Diagnosis	Manage- ment	Outcomes	Severity	
					Oligo- clonal bands	AQP4, MOG Ab and other ABs	CT findings	MRI findings					
D.D. Caval- canti et. al./ USA	41/F	NA	None	Confusion, global aphasia, left gaze preference with NIHSS 16, extensor posturing to noxious stimuli	WBC-41/mm ³ neutrophil 84% Protein: 616 mg/dl Glucose: normal; ***	NA	NA	CT head: venous infarction in the left basal ganglia, thalamus, and mesial temporal lobe with hemorrhagic transformation, intraventricular hemorrhage. CT venogram- occlusion of internal cerebral veins.	NA	Venous sinus thrombosis stroke	EVD, Heparin infusion without bolus treatment	Deceased	Severe
Scullen T. et. al./ USA	63/F	10 days	HTN, Obesity	Altered mental status without focal deficit	WBC<5/mm ³ Protein: normal Glucose: normal, ***	NA	NA	Hypodensities within bilateral globus pallidi as well as a focal parenchymal hemorrhage in the left occipital pole	FLAIR changes at the same locations and diffusion restriction in bilateral globus pallidi and bilateral centrum semiovale	Encephalopathy	NA	NA	Severe
Zoghi A. et. al./ Iran	21/M	14 Days	None	Paresis in lower limbs,	WBC- 150 /mm ³ (60%)	Neg	Neg	NA	MRI of the cervical and thoracic spine	ADEM and LETM	PLEX x 5 days,	Improved	Non-severe

			paresthesia lymphocytes). in lower limbs, uri- nary reten- tion, drowsy	Protein 281mg/dl Glucose: 34mg/dl, se- rum glu- cose110 mg/dl SARS-CoV-2 PCR: neg			LETM with an > 3 segments in the spi- nal cord. Brain MRI showed bilateral long corti- cospinal tract le- sions in internal capsules extending to the cerebral peduncles and pons. Hyperintensity in the sple- num of the corpus callo- sum.		Empiric Tx with vanco- mycin, meropenem and Acyclo- vir				
Gueniec L.L. et. al./ France	69/M	5 Days	DM, HTN, seizure	Status epilepticus	WBC < 5/ mm ³ Protein: 66mg/dl Glucose: 105mg/dl, se- rum glucose 360 mg/dl SARS-CoV-2 PCR: neg	NA	NA	Unremarkable	Hyperintensity of the right orbital pre- frontal cortex adjacent to the olfactory bulb, which seemed to spread toward the right mesial prefrontal cortex and to the right caudate nucleus				
								Non-con- vulsive sta- tus epilepti- cus	IVIG	Improved	Severe,		
Cani I. et. al./ Italy	77/F	18 Days	None	Impaired consciousness, stimulus induced myoclonus, positive	WBC<5/ mm ³ Protein: 56mg/dl Glucose: **; ***	Nega- tive	NA	NA	Diffuse white-matter lesions consistent with chronic small vessel disease	Encephalo- pathy	IVMP x 60mg x 10 days	Improved	Non - se- vere

				primitive re- flexes	SARS-CoV-2 PCR: neg			without contrast en- hancement					
Benameur K. et. al./ USA	31/F	5 Days	Sickle cell disease	Altered men- tation	WBC: 115/ mm ³ 51% Neutro- phils, Protein: >200mg/dl Glucose: 40 mg/dl; *** SARS-CoV-2 PCR: neg SARS-CoV-2 CSF IgM pos	NA	NA	NA	Occlusive thrombus in the right internal ca- rotid artery with as- sociated restricted diffusion on DWI and edema on T2/FLAIR in the right cerebral hemi- sphere consistent with infarct. Foci of T2 signal abnormal- ity were also identi- fied within the cer- vical spinal cord	Acute in- farct, En- cephalitis, Myelitis	Hy- droxychlo- roquine and Peramivir	Deceased	Severe
Benameur K. et. al./ USA	34/M	9 Days	HTN	Profound en- cephalopa- thy, multifo- cal myoclo- nus.	WBC: 1/mm ³ Protein: 37 mg/dl Glucose: 111mg/dl; *** SARS-CoV-2 PCR: neg SARS-CoV-2 CSF IgM pos	NA	NA	NA	Non-enhancing hy- perintense lesion within the splenium of the cor- pus callosum on FLAI and DWI	Encephalo- pathy	NA	NA	Severe

Benameur K. et. al./ USA	64/M	NA	HTN	Profound encephalopathy, multifocal myoclonus.	WBC < 5/ mm ³ Protein: 21mg/dl Glucose: 88mg/dl, *** SARS-CoV-2 PCR: neg SARS-CoV-2 CSF IgM pos	NA	NA	NA	Hyperintense area in the right temporal lobe	Encephalopathy	NA	Improved	Severe
Dogan L. et. al./ Italy	49/M	NA	None	NA	WBC: 0 Protein: 37.6mg/dl Glucose: 130mg/dl; *** SARS-CoV-2 PCR: neg	NA	NA	NA	Bilateral frontal cortical hyperintensity together with focal effacement of right frontal sulci. Meningoencephalitis DWI showed frontal cortical hyperintensity and leptomeningeal enhancement.	Lopinavir/Ritonavir, Azithromycin, Hydroxychloroquine, Favipiravir PLEX x 6 cycles	Improved	Severe	
Dogan L. et. al./ Italy	59/M	NA	HTN	NA	WBC: 0, Protein: 73.2mg/dl Glucose: 201mg/dl; *** SARS-CoV-2 PCR: neg	None	NA	NA	MRI bilateral extensive hyperintensity frontal and parietal white matter. DWI images showed matching areas restrictions and leptomeningeal enhancement	Azithromycin, Hydroxychloroquine, Favipiravir PLEX x 9 cycles	Improved	Severe	

Dogan L. et. al./ Italy	59/M	NA	HTN, DM, Obesity	NA	WBC: 0 Protein: 65.7mg/dl Glucose: 121mg/dl; *** SARS-CoV-2 PCR: neg	None	NA	NA	Normal	Meningoen- cephalitis	Azithromy- cin, Hy- droxychlo- roquine, Favipiravir PLEX x 1 cy- cle	Deceased	Severe
Dogan L. et. al./ Italy	51/F	NA	HT, DM	NA	WBC: 0 Protein: 131mg/dl Glucose: 120 mg/dl; *** SARS-CoV-2 PCR: neg	None	NA	NA	Normal	Meningoen- cephalitis	Azithromy- cin, Favipi- ravir PLEX x 5 cy- cles	Patient re- gained con- sciousness after 1 st cy- cle	Severe
Dogan L. et. al./ Italy	55/M	NA	HTN	NA	WBC: 0 Protein: 52mg/dl Glucose: 67mg/dl; *** SARS-CoV-2 PCR: neg	None	NA	NA	Normal	Meningoen- cephalitis	Azithromy- cin, Hy- droxychlo- roquine, Favipiravir PLEX x 5 cy- cles	NA	Severe
Dogan L. et. al./ Italy	22/M	NA	Autism	NA	WBC: 0 Protein: 57mg/dl Glucose: 59mg/dl; ***	None	NA	NA	NA	Meningoen- cephalitis	AZI, HC, FAV PLEX x 3 cy- cles	NA	Severe
Virhammar J. et. al. / Sweden	55/F	7 Days	NA	Lethargic, stuporous, Multifocal Myoclonus	WBC: <5/mm ³ Protein: Nor- mal Glucose: **; ***	present	NA	Symmetrical hy- podensities in the thalamci. and midbrain	MRI hyperintensity in subinsular re- gions, medial tem- poral lobes, hippo- campi, and cerebral	AHNE	IVIG fol- lowed by PLEX	Improved	Severe

				SARS-CoV-2 PCR: pos SARS-CoV-2 CSF IgG				peduncle, pons and SWI small foci of petechial hemorrhage in central thalami and subin- sular regions					
Farhadian S. et. al./ USA	78/F	NA	Immunocom- promised, re- nal trans- planted pa- tient	Altered men- tal state, bi- lateral tremor of upper and lower ex- tremity	WBC < 5/ mm ³ Protein: 43mg/dl Glucose: **, ***	None	None	NA	Atrophy and patchy periven- tricular and subcortical white matter hyperintensities, which were inter- preted as sequelae of small vessel is- chemic disease	Encephalo- pathy	Hy- droxychlo- roquine, tocilizumab	Improved	Non-se- vere
Pinto A.A. et. al./ USA	44/F	7 Days	NA	Mild expres- sive and re- ceptive apha- sia, visual and sensory inattention, paresis in right upper and lower limbs	WBC - 13/mm ³ Protein: 50.7mg/dl Glucose 29mg/dl, ***	Absent	Anti- MOG: positive	NA	T2-hyperintensity in periventricular, along the left tem- poral and occipital horns and into the subcortical deep white matter	Anti-MOG syndrome	IVMP 1g x 5 days fol- lowed by oral predni- solone 60mg daily. PLEX x 5 cycles	Improved.	Non-Se- vere
Espíndola OM et.al. /Brazil	NA	NA	NA	NA	WBC- 18/mm3, pro- tein: 60 mg/dl, glucose: 43, ***	NA	NA	NA	Encephalitis	NA	NA	NA	

										SARS-CoV-2				
										PCR: neg				
Espíndola OM et.al. /Brazil	NA	NA	NA	NA	NA	WBC- 2/mm3, Protein: 23 mg/dl, Glu- cose: 96, *** SARS-CoV-2 PCR: neg	NA	NA	NA	NA	Encephalitis	NA	NA	NA
Espíndola OM et.al. /Brazil	NA	NA	NA	NA	NA	WBC- 3/mm3, Protein: 51 mg/dl, Glu- cose: 115, *** SARS-CoV-2 PCR: neg	NA	NA	NA	NA	Delirium	NA	NA	NA
Espíndola OM et.al. /Brazil	NA	NA	NA	NA	NA	WBC- 3/mm3, Protein: 51 mg/dl, Glu- cose: 115, *** SARS-CoV-2 PCR: neg	NA	NA	NA	NA	Delirium	NA	NA	NA
Mingxiang Ye. et. al./ China	NA/M	13 Days	NA	Confusion, nuchal rigid- ity	WBC <5mm ³ Protein: 27mg/dl Glucose: 314mg/dl; *** SARS-CoV-2 PCR: neg	NA	NA	Normal	NA	Supportive treatment Encephalitis only includ- ing Manni- tol infusion.	Improved	Non-se- vere		
Filatov A. et. al./ USA	74/M	1 Day	Atrial fibril- lation, CVA, altered mental		Headache, altered mental	WBC <5mm ³	NA	NA	Normal except an area of	NA	Encephalo- pathy	Vancomy- cin,	NA	Severe

	Parkinson's disease, COPD, recent cellulitis	status, aphasic, apraxia	Protein: Glucose: 75mg/dl; ***	encephalomalacia in left temporal region consistent with prior stroke	Mero- penem, acyclovir along with hydroxychloroquine and lopinavir/ritonavir		
Guilmot A. et. al. /Bel- gium	80/NA	NA	NA	Paroxysmal dysarthria, tonic-clonic seizure, visual hallucinations, short term memory disturbance and anxiety	WBC > 5mm ³ Protein: 46mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	anti-Caspr2 IgG anti-OCB Positive OCB	NA Normal Encephalitis IVMP followed by PLEX (unspecified duration) Improved Non-severe
Guilmot A. /et. al./ Bel- gium	62/NA	16 Days	NA	Aggressiveness, paranoia, temporal status epilepticus	WBC < 5mm ³ Protein: 51mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Mirror NA Normal NA	Encephalopathy NA NA Severe
Guilmot A. /et. al. / Bel- gium	71/NA	5 Days	NA	Delirium, with akathisia, choreiform involuntary movement of upper limbs and gait ataxia.	WBC < 5mm ³ Protein: 32mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Anti-GD1b IgG- negative high titre Normal	Encephalopathy NA NA Non-severe

Guilmot A. /et. al. / Bel- 60/NA 7 Days gium	NA	Delirium		WBC < 5mm ³ Protein: 35mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Negative	Neg	Normal	NA	Encephalo- pathy	NA	NA	Severe
Guilmot A. /et. al. / Bel- 66/NA 5 Days gium	NA	Delirium		WBC < 5mm ³ Protein: 18mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Mirror	NA	Normal	NA	Encephalo- pathy	NA	NA	Severe
Guilmot A. /et. al. / Bel- 58/NA 21 Days gium	Intracardiac thrombus	Stroke like symptoms		WBC < 5mm ³ Protein: 52mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	NA	NA	NA	NA	Acute cere- brovascular disease	NA	NA	Severe
Guilmot A. /et. al. / Bel- 74/NA gium	NA	Patent fora- men ovale, DVT	Stroke like symptoms	WBC < 5mm ³ Protein: 51mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Mirror	NA	NA	NA	Acute cere- brovascular disease	NA	NA	Non-se- vere

Guilmot A. /et. al. / Bel-gium	54/NA	NA	Pulmonary embolism	Stroke like symptoms	WBC < 5mm ³ Protein: 11mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Negative	NA	NA	NA	Acute cerebrovascular disease	NA	NA	Severe
Krett, J.D. et. al./ Canada	69/M	4 Days	CAD, HTN, DM type 2	Unresponsive and diffusely paraparetic.	WBC<5mm ³ Protein: >45 mg/dl, Glucose: **, *** SARS-CoV-2 PCR: neg	NA	NA	Unremarkable	MRI: showed multi-compartmental hemorrhages with mild surrounding vasogenic edema and no abnormal enhancement. MRI spine: unremarkable	ANE	Hydroxychloroquine x 7 days	Partially improved	Severe
Moriguchi T. et. al./ Japan	24/M	9 Days	None	Altered consciousness, generalized seizure, neck stiffness.	CSF: WBC 12/ mm ³ Protein: NA Glucose: **; *** SARS-CoV-2 PCR: pos	NA	NA	CT head- normal with no evidence of edema	DWI changes in inferior horn of right lateral ventricle. FLAIR hyperintensity in the right mesial temporal lobe and hippocampus with slight hippocampal atrophy. Contrast-enhanced imaging showed no enhancement	Right lateral ventriculitis and Encephalitis	Ceftriaxone, vancomycin, acyclovir, Favipiravir and steroids. Kepra for seizure.	NA	Severe

Franke C. et. al./ Ger- many	76/M	NA	NA	Downbeat nystagmus, generalized stimulus-sen- sitive myoclonus	WBC: 1/ mm^3 Protein: 31.4mg/dl Glu- cose:76mg/dl; ***	Positive	Neg	NA	Normal	Autoim- mune en- cephalitis	NA	NA	NA
Franke C. et. al./ Ger- many	58/F	NA	NA	Delirium	WBC: 5 mm^3 Protein: 36.8mg/dl Glu- cose:93mg/dl; ***	Positive	Neg	NA	Normal	Autoim- mune en- cephalitis	NA	NA	NA
Franke C. et. al./ Ger- many	76/M	NA	NA	Right-sided stimulus-sen- sitive myoclonus	WBC: 177/ mm^3 Protein: 93.7mg/dl Glu- cose:83mg/dl; ***	Positive	Neg	NA	Normal	Autoim- mune en- cephalitis	NA	NA	NA
Franke C. et. al./ Ger- many	58/F	NA	NA	Right-sided orofacial myoclonus	WBC: 17/ mm^3 Protein: 28.1 mg/dl Glucose: 52mg/dl; ***	Nega- tive	Anti-Yo positive	PET-CT showed evidence of florid encephalitis with tracer increase in the basal ganglia and limbic system as well as in the cerebellar region of the inferior cer- ebellar artery	Normal	Autoim- mune en- cephalitis	NA	NA	NA
Franke C. et. al./ Ger- many	54/M	NA	NA	Delirium, myoclonus, epileptic seizures	WBC<5 mm^3 Protein: 25.6mg/dl	NA	Neg	NA	Marked edema of the fornix.	Autoim- mune en- cephalitis	NA	NA	NA

Glucose: 75mg/dl; ***											
Franke C. et. al./ Ger- many	77/M	NA	NA	Right-sided faciobrachial myoclonus, Glucose: 145mg/dl;***	WBC<5mm ³ Pro- tein:68.2mg/dl Positive Negative	NA	Ischemic lesion (DWI) changes of the right middle cerebral artery (MCA) region.	Autoim- mune en- cephali- tis,infarct	NA	NA	NA
Franke C. et. al./ Ger- many	48/M	NA	NA	Oculomotor paresis, transient generalized myoclonus, prolonged awakening	WBC<5/mm ³ Protein: 74.1mg/dl Glu- cose:80mg/dl; ***	Nega- tive Negative	NA	Normal	Autoim- mune en- cephalitis	NA	NA
Franke C. et. al./ Ger- many	78/M	NA	NA	Dystonia right > left upper limb, delir- ium	WBC<5/mm ³ Pro- tein:437m/dl Glucose: 94mg/dl; ***	NA Negative	NA	Normal	Autoim- mune en- cephalitis	NA	NA
Franke C. et. al./ Ger- many	75/F	NA	NA	Aphasia, neglect, encephalopa- thy , stupor, impaired conscious- ness	WBC<5mm ³ Pro- tein:16.8mg/dl Glucose: **; ***	Nega- tive Negative	NA	Normal	Autoim- mune en- cephalitis	NA	NA
Franke C. et. al./ Ger- many	69/M	NA	NA	Downbeat nystagmus, orofacial my- oclonus, de- lirium	WBC: 8/ mm ³ Protein: 59.4mg/dl Glucose: 123mg/dl	Positive Negative	NA	Normal	NA	NA	NA

Fadakar N. et. al./ Iran	47/M	10 Days	Unremarkable	Vertigo, headache, mild dysarthria, wide based ataxic gait, head titubation, mild truncal swaying, nystagmus	WBC: 10mm ³ , 60% lymphocytes Protein: 58mg/dl Glu- cose: 60mg/dl; *** SARS-CoV-2 PCR: pos	Neg	Neg	NA	Bilateral cerebellar hemispheres as well as vermis hyperintensities and edema with cortical-meningeal enhancement of cerebellum on post contrast images	Acute Cerebellitis	Lopinavir/ritonavir ad- ministered 400/100 mg twice daily for 14 days	Improved	Non-severe
Guilmot A. /et. al. / Bel- gium	62/NA	21 Days	NA	Ophthal- moplegia, palatal myo- clonus, neck stiffness and areflexic flac- cid tetraple- gia, coma	WBC<5mm ³ Pro- tein: 32mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Mirror	Anti- GD1b IgG high titer	NA	Unremarkable	Encephalo- pathy	IVIG	Partial im- provement	Severe
GuilmotA. /et. al. / Bel- gium	66/NA	21 Days	NA	Delirium, ag- itation, hallu- cination, neck stiff- ness, diffuse myoclonus, bilateral oph- thalmople- gia, palatal tremor, ap- nea and coma	WBC<5mm ³ Protein: 45mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Neg	Neg	NA	Unremarkable	Encephalo- pathy	IVIG	Improving	Severe

Guilmot A. /et. al./ Bel-gium	54/NA 5 Days	NA	Behavioral changes, irritability, paranoia.	WBC<5/mm ³ Protein: 18mg/dl Glucose: **; ***	Mirror Neg	NA	NA	Encephalopathy	NA	NA	Non-severe
Domingues R.B. et. al./ Brazil	42/F 21 Days	Paresthesia of left upper limb, later progression to left hemithorax and hemiface	None	WBC<5mm ³ Protein: 32mg/dl Glucose: 62mg/dl; *** SARS-CoV-2 PCR: pos	Neg Neg	NA	Brain MRI normal MRI Cervical cord hyperintense lesion spanning multiple levels without enhancement	Transverse Myelitis	NA	NA	Non-severe
Mawhinney J.A. et. al./ UK	41/M 10 Days	Congenital nystagmus	Agitated, severe headache.	WBC<5mm ³ Protein: 19mg/dl Glucose: 48mg/dl; *** SARS-CoV-2 PCR: neg	Neg Neg	Normal	Normal	NA	Antibiotics and acyclovir and olanzapine	Improved	Severe
Delamarre L. et. al./ France	51/M 21 Days	None	Coma, right sided 6 th cranial nerve palsy, rhythmic movement of right upper limb	WBC<5mm ³ Protein: NA Glucose: **; *** SARS-CoV-2 PCR: neg	NA Negative	Normal	Progressing lesions with diffuse hyperintense lesions in the thalamus, cerebellum, brainstem, supratentorial grey and white matters	AHNE	IVMP x 3 days followed by IVIG x 5 days	Improved.	Severe
Grimaldi S. et. al./ France	72/M 17 Days	None	Cerebellar syndrome (tremor,	WBC<5mm ³ Protein: 49mg/dl	Negative Negative	NA	Normal	Autoimmune Encephalitis	IVIG x 5 Days followed by	Improved	Non-severe

Zambreanu L. et. al. / UK	66/F	18 Days	None	ataxia, dysarthria) with stimulus-sensitive diffuse myo-clonus	Glucose: **; SARS-CoV-2 PCR: neg	WBC<5mm ³	Protein: 100mg/dl Glucose: 35mg/dl; *** SARS-CoV-2 PCR: neg	Negative	Normal	MRI showed symmetrical hyperintensities in mesial temporal lobes and medial thalamus and to a lesser extent upper pons, as well as scattered subcortical white matter hyperintensities.
Matos A.R. et. al./ Portugal	42/M	7 Days	None	Confusion, hypokinesia, apathy, hyposmia, dysexecutive syndrome, perseveration, dysphonia and dysphagia	WBC<5mm ³	Protein: 78mg/dl	Glucose: **; ***	NA	NA	Multiple hyperintense lesions involving the deep and subcortical white matter on both hemispheres, basal ganglia, and thalamus.
Byrnes S. et. al./ USA	36/M	8 Days	Polysubstance abuse	Slurred speech,	WBC: >5/mm3	NA	NA	Normal	Multiple focal enhancing lesions the	Encephalopathy

				pinpoint pu- pils, agita- tion, chorei- form move- ment	lymphocyte predomi- nance Protein: in- creased Glucose: **; ***			bilateral medial pu- tamen and left cere- bellum. There were also several cortical and subcortical lesions including the hippocampus, pri- marily on the left side, along with punctate restricted diffusion in the right basal ganglia.		IVIG x 5 days			
Goodloe TB 3rd et. al./ USA	52/M	0 Days	DM, HTN, CAD	Altered men- tal status	WBC 0/m ³ Pro- tein:46mg/dl Glucose: 121mg/dl; ***	NA	NA	CT head no acute changes	No acute changes	Encephalo- pathy	NA	Improved	Non-se- vere
Elkady A. et. al./ EGYPT, USA	33/F	4 Days	None	Coma and status epilep- ticus	WBC- 26/ mm ³ 90 % lympho- cytes Protein: 541mg/dl Glucose: nor- mal; ***	Neg	NA	Diffuse brain edema with right thalamic and right cerebellar hemorrhages.	Bilateral hyperin- tensity in thalamci and cerebellum with hemorrhagic com- ponents and rim contrast enhance- ment within brain; left occipital mini- mal leptomeningeal enhancement	AHNE	High dose IVMP	Deceased	Severe
Chalil A. et. al./ Canada	48/F	15 Days	None	Coma, with absent pupil and corneal reflex	WBC: 76/mm ³ 65% Neutrophils Protein: NA	NA	NA	Head CT with CT angiography demonstrated ex- tensive bilateral parietal and	Gadolinium en- hancement with hy- per-intense signal surrounding the hemorrhages, in	AHNE	Hy- droxychlo- roquine and Tocilizumab	The patient was extu- bated with severe	Severe

Clinical presentation and laboratory findings										Management and outcome			
Patient details		Symptoms		Investigations		Treatment		Outcome		Notes			
Abdi S. et. al./ Iran	58/M	30 Days	None	hyperreflexia, mild grant hyporeflexia and dysesthetic manifestations in lower limbs, fecal and urinary incontinence.	Glucose: 139mg/dl; serum 396mg/dl	WBC: 0/mm ³ Protein: 15mg/dl Decreased consciousness, gait ataxia Glucose: 105mg/dl; *** SARS-CoV-2 PCR: neg	Negative NA	NA	MRI diffuse hyperintensity, particularly at the left-side without enhancement, involvement of cortical as well as deep gray matter, and dorsal midbrain	ADEM	IV dexamethasone 8mg TDS	Deceased	Severe
Kakadia B. et. al./ USA	69/M	NA	HTN	Disorientation, inattention, bradypnoea, CSF IgG	WBC: <5mm ³ Protein Normal Glucose: normal; *** SARS-CoV-2 PCR: neg SARS-CoV-2 CSF IgG	NA	NA	NA	MRI restricted diffusion and hyperintensity in the splenium of the corpus callosum	MERS	NA	Improved	Non-severe
Djellaoui A. et. al./ France	69/F	NA	CAD, endometrial cancer, right breast cancer.	Generalized seizures, mutism delirium, asthenia	WBC: <5mm ³ Protein: 25mg/dl Glucose: **; ***	Neg Neg	Neg	NA	Symmetric hyperintensities located mainly in the temporal and occipital lobes with	PRES	Antiepileptic drugs	Improved	Non-severe

				SARS-CoV-2 PCR: neg									
Morvan A. et. al./ France	56/M	NA	Malnutrition, nephrolithiasis with left renal abscess	Coma	WBC: < 5mm ³ Protein: 79mg/dl Glucose: 45; *** SARS-CoV-2 PCR: neg	NA	NA	Acute hydrocephalus with diffuse cerebral edema, bilateral thalamic hyperdensities concerning for hemorrhage with discrete contrast enhancement	Compression of the 3rd ventricle by both thalamus causing hydrocephalus, compression of the 4th ventricle by the cerebellum, diffuse signs of intracranial hypertension and a starting tonsillar engagement	AHNE	NA	Deceased	Severe
Forestier G. et. al./ France	55/M	NA	None	Headache, dizziness, impaired conscious- ness	WBC< 5mm ³ Protein: 46mg.dl protein Glucose: nor- mal; ***	NA	NA	Increased diffusion weighted signal in the splenium of the corpus callosum	Cytotoxic lesion of the corpus callosum	NA	Improved.	Severe	
Munz M. et. al./ Ger- many	60/M	8 Days	HTN	Bladder dys- function, Lymphocytes weakness of lower limbs. Hypesthesia below Th9 level and spastic pare- sis	WBC-27/ mm ³ Protein: 117.7mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Nega- tive	NA	MRI spine- Patchy hyperintensity at Th9-10 and at Th3-5 level. MRI brain- normal	Transverse Myelitis	Methylpred- nisolone 100mg/d	Improved	Non-se- vere	

Vaschetto R. et. al./ Italy	64/M	16 Days	HTN	Coma, tetraplegia	WBC < 5mm ³ Protein: 91.5mg/dl Glucose: 117mg/dl; *** SARS-CoV-2 PCR: neg	NA	Neg	Cortical-subcortical blood-related hyperdensities in the bilateral fronto-parietal and right occipital lobes.	Signal restriction in parietal and parieto-occipital region and at the pons CNS vasculitis as well as scattered regions of hemorrhage	IVIG x 5 days then IVMP x 5days	Mildly improved	Severe	
Zang T. et. al./ USA	40/F	9 Days	HTN, dyslipidemia	Dysphagia, dysarthria, expressive aphasia and mild facial droop	WBC: < 5/ mm ³ Protein: nor- mal Glucose: nor- mal; *** SARS-CoV-2 PCR: neg	NA	NA	Multifocal patchy areas of white matter hypoatten- uation	Extensive patchy hyperintensity bilat- eral frontoparietal white matter, anterior temporal lobes, basal ganglia, exter- nal capsules, and thalamus. some of these foci demon- strated DWI changes with ques- tional minimal enhance- ment	ADEM	Hy- droxychlo- roquine and IVIG x 5 days	Improved	Severe
Cariddi L.P. et. al./ Italy	64/F	25 days	dyslipidemia, OSA and paroxysmal AF	Altered men- tal status, de- creased left limb, nasolabial folds, paresis in lower limbs, global hyporeflexia.	WBC: <5mm ³ Protein: 53 mg/dl Glucose: 139; *** SARS-CoV-2 PCR: neg	NA	Neg	Posterior frontal and temporo- parieto-occipital symmetric bilat- eral hypodensity of the subcortical white matter, and a tiny left occipi- tal parenchymal hemorrhage	FLAIR image shows that vasogenic edema is reduced but still detectable and T2 Gradient-Echo reveals right temporal hypoden- sity, correlated to hemorrhagic pro- cess	PRES	Hy- droxychlo- roquine	Partially improve- ment	Severe

Delorme C. et. al./ France	72/M France	15 Days	None	Psychomotor agitation, cognitive and behavioral frontal lobe syndrome, upper limbs myoclonus, cerebellar ataxia	WBC: 6mm ³ Protein:23 mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Negative	NA	Brain FDG- PET/CT imaging showed bilateral prefrontal and left-sided parieto- temporal hypo- metabolism and a slight hyperme- tabolism within the cerebellar ver- mis.	Unremarkable	Encephalitis	IVIG (dura- tion not specified)	Improved	Non-se- vere
Delorme C. et. al./ France	66/F France	7 Days	None	Psychomotor slowing, Cognitive and behav- ioral frontal lobe syn- drome	WBC: 1mm ³ Protein:30 mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Negative	NA	Brain FDG- PET/CT marked hypometabolism within the bilat- eral prefrontal and associative posterior cortices and hypermetab- olism within the bilateral striatum and the cerebellar vermis	Non-specific white matter hyperinten- sities.	Encephalitis	IVIG x 5 days fol- lowed by IV pulse corti- costeroids	Improved	Non-se- vere
Delorme C. et. al./ France	60/F France	Same day	Temporal lobe epilepsy (hippocampal sclerosis)	Acute anxi- ety, de- pressed mood, aka- thisia, gait imbal- ance, psychomotor agitation, dysexecutive syndrome,	WBC: <5mm ³ Protein:25 mg/dl Glucose: **; *** SARS-CoV-2 PCR: neg	Negative	NA	Brain FDG- PET/CT showed hypometabolism within the bilat- eral orbitofrontal cortices, and a slight hyperme- tabolism in the bi- lateral striatum and cerebellar vermis.	Right mesial sclero- sis	Encephalitis	IV pulse corticoster- oids x 3 days Antidepres- sants	Improved	Non-se- vere

		cerebellar ataxia										
Delorme C. et. al./ France	69/M	7 Days	HTN, Type II DM	Generalized convulsive Status epilepticus	WBC: <5mm ³ Protein: 66 mg/dl Glucose: **; ***	Negative	NA	Brain FDG-PET/CT showed hypometabolism within the bilateral prefrontal and associative posterior cortices, and hypermetabolism within the cerebellar vermis.	Right orbitofrontal hyperintensities on Encephalitis T2-weighted image	Antileptics. IVIG x 5 days. Pulse corticosteroids x 5 days	Improved	Severe
Afshar H. et. al./ Iran	39/F	10 Days	NA	Drowsiness, generalized tonic-clonic seizure	WBC: <5/mm ³ Protein: 19mg/dl Glucose: 61mg/dl	Neg	Neg	NA	FLAIR high signal intensities in bilateral thalamus, medial temporal and pons without gadolinium enhancement	Levetiracetam 500mg IVIG followed by IVMP x 6 days	Improved	Severe
Novi G. et. al./ Italy	64/F	15 Days	Vitiligo, HTN, MGUS	Irritability, severe vision loss, sensory deficit in right leg, anosmia, ageusia	WBC: 22/mm ³ (mainly lymphocytes) Protein: 45.2mg/dl Glucose: **; ***	Mirror	Neg	NA	Multiple T1 post-Gd enhancing lesions of the brain, associated with a single spinal cord lesion at the T8 level and with bilateral optic nerve enhancement	IVMP x 5 days IVIG x 5 days	Partial Improvement	Non-severe
Hayashi M. et. al./ Japan	75/ M	NA	Alzheimer's disease	Altered mental status,	NA	NA	NA	NA	Abnormal hyperintensity in the MERS	Favipiravir, pulse	Deceased	Severe

			hand tremors, urinary incontinence.				splenium of corpus callosum (SCC) on diffusion-weighted image.		corticosteroid, ciclesonide and meropenem		
Yong M.H. et. al./ Singapore	61/M	20	HTN, hyperlipidemia, DM	Flaccid tetraplegia	NA	NA	NA	Increased symmetrical FLAIR signal throughout the white matter and thalamus. SWI evidence of microhemorrhages	AHLE IVIG then IVMP x 5days	Partially improved Severe	
Haqiqi A. et. al./ UK	56/M	7 Days	HTN, CKD, hypercholesterolemia, asthma, pre-obesity	Coma	WBC <5/mm ³ Protein: 71mg/dl Glucose: 43mg/dl, serum 86mg.dl SARS-CoV-2 PCR: neg	Positive	NA	Diffuse white matter hypodensity and multiple bilateral white matter hemorrhagic foci involving the corpus callosum	Increased symmetrical FLAIR signal throughout the white matter. There are also some cystic hemorrhagic areas within both cerebral hemispheres. There are some areas of restricted diffusion within the white matter	AHLE Conservative management	Improved Severe
Varadan B. et. al./ India	46/M	35 Days	Alcoholic CLD	Headache, altered mental status, left facial nerve palsy, paresis in left upper and lower limbs	WBC: >5/mm ³ Protein: Increased Glucose: **, ***	NA	NA	Multifocal non-hemorrhagic lesions in both cerebral hemispheres and the brainstem	Hyperintensity bilateral frontal, parietal lobes, left thalamus, left cerebral peduncle, and medulla. patchy areas of rim enhancement	AHLE 5 days of IVMP and antiedema management	Deceased Severe

Gosh R. et. al./ India	44/F	5 Days	None	Confused, disoriented, memory and thought disorder, generalized tonic-clonic seizure	WBC: 20/mm ³ , 90% lymphocytes	Protein: 60g/dl	Neg Neg	NA	within most of the lesions and DWI changes. Few microbleeds were seen within this lesion.	AHNE	IVMP x 5 days	Deceased	Severe	
Memon A.C. et. al./ USA	65/ F	56 Days	Borderline diabetes and obesity	Lhermitte's phenomenon, urinary incontinence, sensory level at T10	WBC: 20/mm ³ , 91% lymphocytes	Protein: 81.6g/dl	Neg Neg	NA	T2- hyperintensity left fronto-parietal and right posterior parietal areas with and signal blooming in gradient recalled echo (GRE)	MRI small lacunar infarct at right lateral pontine region Repeat brain MRI T2-signal changes bilateral cortical spinal tracts affecting the posterior limbs of internal capsules to the cerebral peduncles and pons.	Late onset Rapidly Progressive Myelitis	Pulse IVMP x 5 days, PLEX x 5 days	Improved	Non-severe
