

Supplementary:

Table S1- Nonparametric Correlations between demographic characteristics, ADHD symptoms, antisocial behavior types and coherence.

	Age	Gender	Religiosity	Emotional symptoms
ADHD symptoms	-.123**	-0.008	-.148**	.343**
Severe physical antisocial behavior	-.252**	-.087**	-.044**	.065**
Mild physical antisocial behavior	-.240**	-.109**	-0.008	.101**
Verbal antisocial behavior	-.233**	-.080**	-.157**	.173**
Property crimes	-.210**	-.104**	-.144**	.136**
Public order crimes	-.246**	-.059**	-.178**	.100**
Drug use	.053	-.348**	-.231**	-0.004
Coherence	.208**	-.099**	.290**	-.606**

** . Correlation is significant at the 0.01 level (2-tailed).

Table S2- Pearson correlations between the research variables

	1	2	3	4	5	6	7	8
1. ADHD symptoms	1							
2. Severe physical antisocial behavior	.220**	1						
3. Mild physical antisocial behavior	.233**	.694**	1					
4. Verbal antisocial behavior	.249**	.451**	.574**	1				
5. Property crimes	.173**	.655**	.574**	.382**	1			
6. Public order crimes	.269**	.453**	.489**	.543**	.443**	1		
7. Drug use	.127**	.286**	.265**	.270**	.300**	.362**	1	
8. Coherence	-.424**	-.215**	-.307**	-.380**	-.229**	-.309**	-.129**	1

** . Correlation is significant at the 0.01 level (2-tailed).
